PEDAGOGICAL BASIS OF USING THE DUAL EDUCATION SYSTEM IN TRAINING SPECIALISTS IN THE EDUCATION SYSTEM.

Master's student of the "Pedagogy and Psychology" department of the Asian International University:

Isoqova Shaxnoza Shuxratovna

Abstract: Globalization processes, modern technologies and economic development have a significant impact on the education system. These changes require improving the quality of education, introducing new pedagogical methods and further improving the personnel training system. In this regard, the dual education system is of great importance in training specialists, allowing students to acquire practical skills along with theoretical knowledge. Although the dual education system is widely used mainly in vocational education, it also shows its effective results in higher education. This article discusses the pedagogical foundations of the dual education system and its role in training specialists.

Keywords: Dual, Dual education, Combination of theoretical and practical knowledge, Pedagogical strategies and the role of teachers, High-quality personnel training, Gaining experience and eliminating shortcomings

Main part: The dual education system is a form of education that combines theoretical knowledge with practical skills. In this system, students and pupils undergo internships not only in educational institutions, but also in the production or service sectors. The main essence of dual education is that during their studies, students acquire practical skills related to their profession in real working conditions, which allows them to be successful in their future work.

Pedagogical Foundations of the Dual Education System

Combination of theoretical and practical knowledge

- The dual education system is based on combining theoretical knowledge with practical work. In the process of education, students acquire knowledge related to their profession not only through training courses, but also through practical training in the production or service sectors. This, in turn, increases their professional skills and ensures high efficiency in the workplace.
- Cooperation between production and educational institutions
- The dual education system requires close cooperation between production and educational institutions. Students studying in educational institutions undergo internships related to their profession at production enterprises. This cooperation, in turn, helps education to meet modern requirements, and employers to train qualified personnel.
- Pedagogical strategies and the role of teachers
- The dual education system requires a review of pedagogical strategies. Teachers play an important role in teaching not only theoretical knowledge, but also practical skills. For this, it is necessary to provide teachers with updated methodologies based on practice. Also, teachers at production sites must have pedagogical knowledge, since their task is to guide and support students in the work process.
- Flexibility and a personal approach to personnel training
- The dual education system allows for a personal approach. Students undergo internships in areas that interest them and in which they want to work in the future. This approach increases their interest in

the profession, develops their skills, and prepares them for future work. In addition, the dual education system provides students with flexibility, as they plan their educational process in accordance with the requirements of production and educational institutions.

Advantages of the Dual Education System

- ✓ High-quality training
- ✓ The dual education system allows students to gain experience in real work conditions. This increases the quality of personnel and helps to train highly qualified specialists in the production sector.
- ✓ Employment opportunities for students
- ✓ Students who study through the dual education system often find jobs at the enterprises where they have completed their internship after graduation. This is because manufacturing enterprises are familiar with them and highly value their qualifications when hiring them.
- ✓ Gaining experience and overcoming weaknesses
- ✓ Students identify their strengths and weaknesses during the internship. This allows them to overcome their weaknesses, as well as gain the experience necessary to prepare for future work.

Principle - a system of guiding ideas and basic requirements for the design of a holistic educational process, arising from the laws established by the science of psychology and pedagogy, the goals, content, pedagogical technologies, activities of teachers and students, and the initial theoretical rules for studying the activities of teachers and students. The types of signs of the concept of "principle" include: etymological, epistemological, logical, methodological and value signs. Each of them is necessary, all together sufficiently fully expressing the objectivity of the content of this concept. Principles of a professionally oriented approach: state, regional, sectoral, sectoral, personal needs as education. Humanistic ideological leadership, improving the quality of materialized knowledge in the quality of life knowledge; unity of management and self-management; rotation of teachers and employees; combination of budgetary and extra-budgetary financing. The principle of professional orientation of education. Principles of continuous professional education; active involvement of young specialists in the labor process and social work; continuity of pedagogical influences. Principles of selecting the content of vocational education; reflection of the problematic construction of knowledge based on the forecast of the development of the professional and qualification structure of personnel. Conducting conversations with parents of students on directing their children to a suitable profession. Informing students about the negative consequences of choosing the wrong profession. Creating favorable conditions for students to form and test initial general labor and professional skills. In order to direct students to the right profession, studying their personality, type of work and interest in professions.

Conclusion: The dual education system plays an important role not only in the effective organization of the personnel training process, but also in strengthening ties between students and employers. The pedagogical foundations of this system are based on the combination of theoretical knowledge with practical skills, the development of cooperation between production and educational institutions, and the provision of an individual approach. The dual education system serves to further improve the personnel training process, train highly qualified specialists, and increase employment opportunities.
