THE ROLE AND IMPORTANCE OF POPULAR SCIENCE TEXTS GIVEN IN THE ELEMENTARY SCHOOL READING LITERACY TEXTBOOK

Odinaboyeva Navroza,
2nd year master's degree from Tashkent Chemical International University

Annotation: This article presents theoretical information and scientific observations on popular science texts and articles that serve to educate the student with attention to their essence in a primary grade reading literacy textbook, and also think about how to evoke artistic and aesthetic pleasure in the student.

Key words: popular science texts and articles, theory, scientific observations that evoke artistic and aesthetic pleasure in the student, and high intelligence.

President Of Our Country Sh.M.Mirziyoyev said that ” our young people have independent thinking, high intellectual and spiritual potential and will be able to grow up to their peers on a global scale as people who do not empty themselves in any field, to be happy, mobilize all the strength and capabilities of our state and society, " calling for a qualitative and effective organization of education, especially, upbringing as a person with high intellectual and spiritual potential is one of the pressing issues of today.

Topics of socio-historical content provide knowledge about the past of our Motherland, the life of our people, the struggle of Valor, the work done by the great figures, historical dates. Texts about Abu Rayhon Beruniy, Ibn Sina, Amir Temur, Alisher Navoi, Babur and other ancestors, which have taken place from Reading Literacy textbooks, not only introduce readers to our past, but also help us to teran understand their duty and responsibility to the Fatherland. This is how a feeling of love for the Motherland is formed in students. In the process of introducing and analyzing popular science works on a historical topic, written about the past of our homeland, readers will have the opportunity to compare the past with the present. They form an understanding of community progress, albeit briefly. In fact, even in the formation of the spiritual world of the people, there is a great influence of great gods, writers, poets. In the primary class, a spiritual, educational and educational basis is created, which determines the future progress of the student. Popular Science articles have a role in this. While students learn from scientific information through such articles, important events of the historical period produce skills for observation in the literal sense. In particular, independence, heroes of the land, great gods and socially significant articles on the current topic, which define our spirituality, make a special turn in the worldview of the younger generation. That is, the enrichment of their world of thought sets the stage for the awakening of high pride in relation to our mother-country, which is rapidly progressing. In addition, it is even more important to focus on the genre characteristics of such articles. In elementary school reading books, scientific popular articles are gaining expression on colorful topics. In IT, students are given important insights about the fact that the Republic of Uzbekistan is an independent country, about the creative work carried out in recent years in our country. Readers will get acquainted through such articles about their native homeland, their appreciation of their native language, national folk values, lifestyle and work, our dedicated contemporaries.

After independence, the textbooks of the book “reading literacy " were radically edited. It was succeeded by spiritually exalted works that manifest our national life, our beliefs and concepts, our

VOLUME-5, ISSUE-3

traditions, our psyche and centuries-old desires. Already, the demand and needs of the new – third millennium reader, whose elementary reading books are rapidly developing, continuously progressing, monand is increasingly improving. In particular, the reading book of the 3rd grade highlights the subject-content, actual significance of texts and popular science samples, the wide coverage of the lives of our great ancestors and great thinkers. As early as the first years of independence, our president called on younger generations to study history, “without historical memory–no future.” This also began to manifest itself in reforms in the educational system. In particular, when creating a new generation of elementary reading books, special attention was paid to historical topics.

At this point, it is advisable to compare the current 3rd grade reading book and its previous edition. Somehow, Popular Science articles reflected more on the breath of the era in the previous edition of the textbook. It is clear that Popular Science articles dedicated to the heroes of the land in the reading book play a more role in the spiritual world of the younger generation. The article about the hero of Uzbekistan Azod Sharafiddinov, which is located from the previous edition of the textbook, teaches readers a lesson from the teacher's true science, teacher-he is an apprentice school, science and perseverance in life:

"Free Sharafiddinov,– noted in the article, - worked at the National University all his life. The scientist gave knowledge to thousands of students. Those who listen to his lectures are proud that “we have been taught free Sharafiddinov” for life. Free Sharafiddinov highly respected the teachers. For example, his teacher Abdullah was a devotee of Qahhar. Abdullah saw Qahhar as one of the herbalists who actively fought in the Istiqlal cause during his time”.

The courage of Azad Sharafiddinov in science is truly instructive; some details in the article, for example, the fact that he was in check, separated from both legs, put the magazine “world literature” on his feet, while his eyes dim, editing the magazine's materials using a magnifying glass is a sign of his perseverance. Moreover, the fact that the scientist made numerous speeches on strengthening independence in the Republican Time Press, on radio-television, wrote several books can be a lesson school for today's navqiran generation. As a result, the students received O.It is not for nothing that Sharafiddinov will be awarded two high orders and the title of Hero of Uzbekistan. Consequently, Azad Sharafiddinov found value in the years of independence as a scientist who devoted his life, career to science, development of Uzbek literature. Passing This Popular Science article to elementary students on the basis of videos covering the life path of a scientist, numerous articles published about him in magazines and published books will help clarify the essence of the topic.

Such articles clarify another feature of Popular Science articles. In them, according to the superiority of real reality, a sense of spontaneity in social life, it is advisable to update and replenish information. Let's Say O.Shrafiddinov is a hardworking scientist who is considered to be one of the Dargas of our science, a man of strong perseverance and sharp perception who is worth the pride of the whole of Uzbekistan. Rustamjon Kasimzhonov, on the other hand, is a multiple world champion in chess, a sport that determines human intelligence. That is, they are real heroes of our time. Consequently, the inclusion of articles about these individuals in the primary school reading book constitutes a kind of Education. Because it will not be right to print this article in the 2010 edition of the 3rd grade reading book exactly in the new generation of the textbook. For the past three years, Rustamjon Kasimjonov may have won new victories, or before moving on to such topics, it is necessary to look for new information in newspapers and magazines, be able to distinguish the most important from them. In addition, they are replaced when it is considered more important to read

another current, or worldly events in social life by the younger generation. If Elementary School students regularly read newspapers and magazines published for themselves, then student observation prevails when studying articles like the one above. As soon as teran's meditation skills are formed, creativity is behind the students.

One of the main features of independence is the fact that Uzbekistan has its own symbols. In particular, the presence of the state flag of the Republic of Uzbekistan is the true pride of our people. The current 3rd grade reading book gives the text of the children's writer Free Malik “the coat of arms of our Motherland–a fairy tale about tugro”. The "fairy tale" tells about the coat of arms from the symbols of the state, or rather about the Humo bird in it. It is true that its writing in the style of a fairy tale attracts more attention from readers. At the same time, the leader in scientific observation in his Zamiri. The article is described in the form of live communication with readers, dialogical conversation:

-Let's take our coat of arms, children!

- Iya, did the bird in our coat of arms come to life?

- Hello, o beautiful bird. Wings silver...

- Hello, o child of an independent country.

– What is your name, O Bird, the wings are silver?

- I am a bird of happiness-human.

- E, ha... I knew. I read about you in fairy tales.

- Are you telling the truth?!

- Ha. It turns out that in ancient times there was a land. His violent King invaded another land. Demanded his wealth. The end is full of his own mint as well. The land was left without a king. Then people said who we will now King. At that moment, a Humo bird appeared in the sky of the land.

The wise say, " whoever lands on his head will be the King.” Jarrists jar solibdi:

- People-it's people! Don't say I haven't heard! And those who hear, stand and walk towards the field. In the sky, the bird of happiness flies with a hammer. Whoever this bird lands on his head will be that King...

Those who heard this were in a hurry. How much money he earned-he said that officials wanted to hunt the bird of happiness. But the bird landed on the head of the most generous and righteous , honestly, wise guy. Justice has been decided in the country.

-Are you that bird, Humojon?

- Ha. Not wrong. O child of an independent land, I have seen many lands. While alone your homeland is like a country in fairy tales. Therefore, he flew to talpinib.

- Thank You, Humajan!

In general, we are not mistaken to say that popular science texts about state symbols bring a wide space from elementary school reading books. Information about the state flag, anthem, coat of arms is visible as a separate topic in a new generation of reading books in the years of independence. One of the main features of independence is the fact that Uzbekistan has its own symbols. In particular, the presence of the state flag of the Republic of Uzbekistan is the true pride of our people. In this sense, even in the previous edition of the 3rd grade reading book, The Popular Science text about the national flag was considered significant in that it was able to give readers a comprehensive understanding.

It is really the duty of every student to know the symbols of the state, of course. The child goes to get acquainted with the picture of our national flag as early as preschool institutions. Even in grades

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-3

1-2, it is clear that they can get an idea of these symbols through their picture, which is reflected in the school, classrooms. The transition of state symbols as a separate subject in 3rd grade reading classes can ensure that students have a theoretical knowledge of it. Let's say in the 2008 edition of the reading book, which we compare, a popular science text called the “state flag of the Republic of Uzbekistan” is given. First of all, a clear picture of the flag is expressed in it. And the text contains important information about the state flag. When students get acquainted with it, the state flag of the Republic of Uzbekistan will be approved at the VII session of the Supreme Council of the Republic of Uzbekistan held on November 18, 1991. The text also states that the state flag and its symbol are historically connected with the states that existed in ancient times on the border of today's Uzbekistan, embodies the national-cultural traditions of the Republic.

In this way, elementary school students realize through the textbook the meaning and essence of the symbols that have been renewed due to independence. Because the colors and images on the flag, their figurative expression, were expressed in accordance with the readers of this age. In particular, it is noted that the blue color on the flag is a symbol of the Eternal Sky and obihayat, which is considered the content of living, in the language of emblems it means good, wisdom, honesty, fame and loyalty, therefore the color of the flag of the Emir Timur state is also blue.

Through this, students can clearly find out why exactly Blue was chosen on the flag. Its symbolic meaning is expanded by its concepts related to colors. Similarly, white makes it clear in its meaning that it is the charisma of the day and the bullshit with the luminaries of the universe, and in its symbolic sense-the Holy peace, purity, innocence, purity, purity of dreams and fantasies, the embodiment of the desire for inner beauty.

Importantly, the symbol of colors on the flag harmonized in itself the views of national traditions, values, ancient ancestors, which were revived due to direct independence. In this sense, the expression of independence is apparent in their structure and interpretation. Let's say that the stars and the crescent moon in it are classified as follows: “the stars are considered a priest for all, a divine embodiment. The image of 12 stars on the state flag of the Republic of Uzbekistan is also directly related to our historical traditions and ancient annals. Our attention to the twelve stars is also explained by the fact that the science of UFOs has advanced in the scientific thinking of the ancient States on the border of Uzbekistan.

The image of 12 stars on our state flag should be understood as a symbol of the antiquity of Uzbek folk culture, its striving for perfection, loyalty to its soil. Indeed, the colors and emblems on the flag acquired such an essence due to independence. Today's reader should be told that our old chronicle, the restoration of historical traditions is a guarantee of independence. The textbook also states: "the image of the Holy Crescent is associated with our historical traditions. At the moment it is a symbol of our gained independence”.

Therefore, it is not for nothing that the national state flag, at first, is gaining value as a badge of independence. For this reason, it is desirable if readers are given more detailed information about the state flag. In particular, the following information in the”National Encyclopedia of Uzbekistan " is recognized: the state flag is one of the main symbols of the state: an official, distinctive sign from other states, an emblem. The image of the state flag is determined by a special law or constitution. It is a symbol of state sovereignty. It will consist of one or more colored Swans depicting a coat of arms or other emblem. The flag of the state consists of state institutions, embassies, consulates, missions, customs, etc.k. rises in its buildings. On the days of national holidays, embassies, missions, consulates raise the flag of their country. The state flag is also hoisted during ceremonies, when international

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-3

sporting trophies are awarded, and in other cases.

The schematic and Color Image of the state flag of the Republic of Uzbekistan was adopted by the law “on the state flag of the Republic of Uzbekistan”(1991). 18 November). The state flag of the Republic of Uzbekistan is represented in the international arena; during the trips of the official delegations of the Republic of Uzbekistan to foreign countries, at international organizations, conferences, world exhibitions, sports competitions. The state flag of the Republic of Uzbekistan and the procedures associated with its hoisting are established in the above law. The state flag of the Republic of Uzbekistan is carried in a permanent image, including the president of the country, the Supreme Assembly, the Government of Uzbekistan, local councils of people's deputies, buildings where the authorities are working, international events in which official delegations of Uzbekistan are attending, holidays – buildings of ministries, state committees and institutions, enterprises and organizations, as well as housing buildings.

Such expansive information inspires the reader a vivid picture of how majestic the national flag is, in particular, the main tool in determining its position among the countries of the world. The importance of the flag, which is considered a symbol of a single school or class in the eyes of an infant, will be understood with such information. At the same time, it is clear to readers that the flag existed from a much earlier time, when it was kept under the name “tug” in the Middle Ages, when it was explained that each tribe, the seed, had its own tug-flag. Or, we think that it is also darcor to dwell on the existing flags until independence. Thus, a holistic picture of this topic appears in the reader.

Similarly, a thoughtful approach is required when passing the topic of the state emblem of the Republic of Uzbekistan. The 3rd grade reading book provides basic information about it, although it is compact. It is also composed of two parts, the first one reflecting on its appearance, essence, symbol of emblems in the image. The second part deals with the origin of the word coat of arms in general, its interpretation in historical sources, its importance. Special preparation is also necessary when passing this topic. The fact that the state emblem of the Republic of Uzbekistan was approved at The X session of the Supreme Council of the Republic of Uzbekistan on July 2, 1992 is noted as an important historical date. Then, on the basis of its image, the essence of each symbol is analyzed. In particular, through the information in the textbook, it is possible to find out: the state coat of arms of the Republic of Uzbekistan consists of an image of the sun shining over the valley in which it blooms, as well as an image of wheat spikes on the left side, an image of cotton swabs opened on the right side. At the top of the coat of arms, an eight-pointed star is depicted as a symbol of the Republican Jeeps: a crescent moon and a star, located within eight edges, are symbols of the salvation of Muslims. In the center of the coat of arms is inscribed the wings of the legendary Humo Bird, a symbol of himmat, supremacy and dedication. These symbols and emblems are inscribed with the word “Uzbekistan” on a three-color chambar band representing the peace of our people, the state flag of the Republic at the bottom. Students will be able to find answers to questions of their interest through the image of the coat of arms as well as a comparative study of information. It is especially understood that the image of wheat and Virgo, humo bird, Sun, Blue Mountains, two rivers are just symbols of our fertile land. Through these symbols and symbols, students are guided to goodness, proud of the well-being of their country. The conclusions about the historical privates of the coat of arms and theoretical sources in the textbook deserve recognition. According to him, the word “coat of arms” is derived from the German word "herbo", meaning a sign of state, border, territory and other hereditary property to Kings and rulers. This is exactly what the Turkish word “stamp” meant

VOLUME-5, ISSUE-3

even in the era of the ancient Turkish Khan Oguzhan, who reigned on a huge border 2500 years ago.

It seems that This Popular Science article also embodies the characteristics of the genre in all respects. Importantly, through the article, 3rd graders gain a view of the land in which they live from the universe, an initial vision and knowledge of the planets. They will also learn from the discovery of great allomas mentioned in popular science texts in reading books 1-2. Already having the same learning skills is the leading goal of science, including Popular Science articles.
