ANNOTATION

The article examines current issues of improving the mechanisms for implementing intellectual property rights in national media in accordance with international standards. The author analyzes the current state of legal regulation, identifies key problems, and offers recommendations for harmonizing national legislation with international norms. Special attention is paid to the protection of copyright, combating piracy, and improving legal culture in the media industry.

Key words: Intellectual property rights, media, national legislation, international standards, Uzbekistan, comparative analysis, copyright, related rights, plagiarism, intellectual property protection, licensing.

Today, modern media plays an important key role in shaping public opinion, disseminating knowledge and cultural values. However, the development of digital technologies and the globalization of the information space have led to an increase in the number of violations of intellectual property rights. In this regard, the issue of improving the mechanisms for implementing intellectual property rights in national media to the level of international standards is becoming relevant.

The first step to the effective implementation of intellectual property rights is understanding their essence both among the media and among the general public. It is important to conduct information campaigns that would explain what IP rights are, what types of protection exist and how they can be used. Educational programs and seminars for journalists and media workers can significantly increase awareness and promote compliance with the legal framework.

Uzbekistan, like many other countries, faces challenges in the field of intellectual property rights (IP) protection in the context of digital transformation. Despite significant efforts to reform legislation and bring it into line with international standards, problems related to illegal use of content, low awareness of intellectual property rights and insufficient effectiveness of law enforcement practices persist in national media. In this regard, the experience of Uzbekistan is of particular interest for study and generalization.

National legislation should be brought into line with international standards. Important aspects are the agreements of the World Trade Organization (WTO) and the Digital Millennium Copyright Treaty (WCT). When considering the possibility of improving legislation, it is necessary to take into account modern realities, such as digital content technologies, information sharing platforms and cases of rights infringement in the online environment.

If we analyze the current state of legal regulation of intellectual property, then the protection of intellectual property is a pressing issue in the era of digital technologies and media globalization. National media face challenges in complying with international standards in the field of copyright, patents and trademarks.

The importance of respecting intellectual rights, respecting and protecting intellectual property is vital to sustaining creativity, innovation and economic growth. National media, as creators and distributors of content, must respect copyright, ensuring fair remuneration to authors and copyright holders.

National legislation in the field of intellectual property often lags behind dynamically developing international standards. This is due to the insufficient adaptation of norms to the digital environment, as well as the lack of effective enforcement mechanisms. In particular, cases of illegal use of content are observed in national media, which undermines trust in the media industry and poses a threat to authors and copyright holders.

Harmonization of national legislation To effectively implement intellectual property rights, it is necessary to harmonize national legislation with international treaties and agreements. This includes the adoption of laws protecting copyrights, patents, trademarks and other forms of intellectual property.

One of the main aspects of the successful implementation of IP rights is the creation of effective protection mechanisms. Establishing specialized bodies and courts that can respond quickly to violations is an important step. Such bodies should have access to the latest technologies and protection methods, which will allow them to effectively identify and prevent violations of intellectual property rights. An important aspect is raising awareness among journalists, editors and other media workers about intellectual rights and the consequences of their violation. Educational programs and trainings can contribute to a better understanding.

Effective enforcement of intellectual property rights requires the creation of effective mechanisms to ensure compliance with the law. This may include the creation of special control bodies, the introduction of penalties for violations, and access to justice for rights holders.

Given the growth of digital media, it is necessary to develop new approaches to the protection of IP rights in this area. Content platforms must provide secure pathways for the dissemination of information, while at the same time taking into account the rights of authors and creators. This includes the use of technologies such as blockchain to track and protect intellectual property rights.

It is important to establish cooperation between national media, governments, rights holders and other stakeholders at the national and international levels. Sharing best practices and best experiences in the field of intellectual property protection will help to develop effective solutions.

The key problem in the implementation of intellectual property rights is:

- Insufficient awareness of media market participants about their rights and responsibilities.
- Lack of effective mechanisms to combat piracy.
- Non-compliance of national legislation with international standards such as the Berne Convention and the TRIPS Agreement.[1]
- Low level of legal culture in society.

For recommendations on improving the implementation of intellectual property rights, it would be better to:

- Harmonize national legislation with international standards.
- Implement modern technologies for copyright protection (for example, blockchain).
- Conduct educational programs to improve the legal culture among media employees and society as a whole.

- Strengthen liability for violations of intellectual property rights.

In Uzbekistan, the legal framework in the field of IP is regulated by the Law of the Republic of Uzbekistan "On Copyright and Related Rights" (2006).)[2], as well as the Civil Code [3]. In recent years, the country has taken significant steps to improve its legislation, including ratifying international agreements such as the Berne Convention and the WIPO Copyright Treaty.[4]. However, despite the progress, problems remain related to:

- Insufficient awareness of journalists and media employees about intellectual property rights.
- Lack of effective mechanisms for monitoring and preventing violations in the digital environment.
- Weak law enforcement practices, procedures for protecting IPR are often lengthy and complex, making it difficult to hold violators accountable.
- Low level of legal culture among users and content creators.

For example, illegal copying and distribution of content without attribution is common in online publications and social networks. To address these issues, the National Copyright Database was created in 2021, which is designed to simplify the process of registering and protecting authors' rights..[5]

I believe that it is necessary to: strengthen educational programs for media employees and copyright holders, introduce modern technologies such as blockchain to track the use of content, develop cooperation with international organizations such as WIPO to exchange experiences and best practices, and tighten penalties for violations of intellectual property rights, including fines and blocking pirated resources.

Uzbekistan's experience in the field of implementation of intellectual property rights demonstrates both achievements and remaining challenges. To further improve the legal framework and practice, it is necessary to continue working to harmonize legislation with international standards, as well as actively introduce modern technologies and improve the legal culture in society. This will not only protect the rights of authors and copyright holders, but also strengthen trust in national media.

Experience of other countries in the field of IP protection such as the European Union has strict copyright protection standards, including the Digital Millennium Copyright Directive (2019)[6]. This directive obliges platforms to remove pirated content and ensure fair compensation for authors.

- USA: The United States has a Digital Millennium Copyright Act (DMCA) system, which provides mechanisms for the removal of content that violates copyright and protects.

In conclusion, to ensure compliance with intellectual property rights in national media in accordance with international standards is an important task in the modern era. This requires a comprehensive approach, including improving legislation, raising awareness, creating control mechanisms and international cooperation. Only in this way can we ensure respect for creative work, stimulate innovation and promote the development of the media industry. Improving the implementation of intellectual property rights in national media is an important step towards creating a sustainable and fair media industry. To achieve this goal, it is necessary not only to adapt legislation to international standards, but also to actively introduce modern technologies, as well as to raise the

level of legal culture in society. Improving the implementation of intellectual property rights in national media requires a comprehensive approach that includes legal, educational and technological dimensions. The main task is to ensure modern and fair regulation that meets international standards. Only by respecting IP rights can we create an innovative and competitive environment that will contribute to the development of culture and the economy as a whole. Working together, national media, government agencies and international organizations can make a significant contribution to the protection of intellectual property rights and the development of the media landscape.
