Abstract: This from the article start class teachers and supreme education graduate course students students education quality assessment according to international in research participation to reach preparation for the purpose use possible .

Key words: Concept , international program , education quality , scientific convention , logic thought , understanding maturity , real situation , innovative method , international research , education achievements , PISA tasks , literacy level .

State leader signed by " Uzbekistan Republic people education system by 2030 develop concept " on approval " in the decree human capital of formation main link in the system done increase necessary tasks and them to life implementation ways to get there surrounding by designating was given . In particular , it our country by 2030 PISA (The Programme for International Student Assessment) - about students education in the field achievements according to the assessment international program in the ranking 30 advanced countries in the world country in a row to enter achieve The task is set .

Concept with met in a person , naturally , the PISA system research more about to know desire is born . We are for the first time in the phrase Uzbekistan Republic Ministers The court's decision of December 8 , 2018 , " People's education in the system education quality assessment in the field international research organization to grow " On measures " in the decision face We came . This in the document Ministers Court under Education quality control to do state inspection in the presence of Education quality according to the assessment international research done increase national the center organization to reach decision made , its main tasks and areas of activity arrived education in the system winter , mathematics and natural direction from sciences literacy level development innovative methods working exit and current aimed at achieving scientific research take to go ; education quality assessment in the field international connections installation , international projects working exit and done increase , international scientific conferences and symposiums organization to grow and while passing participation to add ; general middle education institutions international in research successful participation to reach supply ; Uzbekistan Republic of international assessment in programs record reached the results other countries results with comparative comparison marked .

In turn in the future our country education quality according to the assessment following international in research participation in the eye caught :

PIRLS (Progress in International Reading and Literacy Study) - primary 4th grade students the text oh winter and understanding level assessment ;

- TIMSS (Trends in International Mathematics and Science Study) - 4th and 8th grade students mathematics and natural direction from sciences literacy level assessment ;

- PISA (The Program for International Student Assessment) - 15 years old about the students winter , mathematics and natural direction from sciences literacy level assessment ;

- TALIS (The Teaching and Learning International Survey) - general middle education schools leaders and teachers with s o ' rovnoma to pass through at school to teach and education to take processes efficiency evaluation .

Note to grow our country must education institutions PISA international in research for the first time in 2021 participation will reach .

PISA: PROBLEMS AND SOLUTIONS

- This to the program in 1997 basis "put in ," he says. Mirishkor district people department of education education quality monitoring department inspector-methodologist Elyor Shokulov . - It is from him that main The goal is to travel the world . education system effectiveness 15 years old Students - young people in 3 directions (reading , mathematics , natural sciences) (in terms of subjects) literacy , their creative and critical to think , to take knowledge useful in life to take to their abilities price to give and later these skills harvest to do from encouragement consists of . The program Australia pedagogical research Council , Netherlands national pedagogy Institute , USA Vestate and pedagogical testing services , as well as Japan 's education in the field research national institute in cooperation The program current to grow idea work of the providers initiative with previously in the 2018 PISA program Economic cooperation and progress to the Organization (OIC) 35 member countries , 43 non- member countries , a total of 78 countries and cities participation Every one from the state participation provider about students number in the country 15 years old in total 2 percent of students in the amount of election in a way is formed . From this come when it comes out every one 10 thousand out of 4500 from the state up to student participation Former union from countries Russia , Latvia , Lithuania , Estonia , Kyrgyzstan , Kazakhstan participated . They between the most good score Estonian to the students relevant , although this country young people for the first time participation In 2006 , he scored 516 points and finished 11th . Although it was occupied in 2015 , this is the k o ' indicator relevant 534 points in order and third The ring was raised .

It is known that in 2015 from research then around the world first , second and t o ' fourth the places our continental compatriots - Singapore , Japan and China Taipei o ' students PISA international assessment program tests three in one once was held , and the students knowledge three in the main direction , 1000 points in the system is evaluated . Every during the next monitoring process above counted from three directions to one separately attention For example , in 2000 of the research main direction oh winter literacy , 2003 mathematician literacy , in 2006 and natural sciences literacy This situation is periodic repetition in consideration in 2021 as a major subject mathematics selection It will be clear . Test questions to the program member of countries experts with agreed without international consultants group by is compiled .

This point of view from the point of view when viewed , our country education system employees in front of standing main problems from what consists of ?

The first one is about the students . knowledge level defects . Current year in 1035 schools in our country According to the results of the monitoring conducted about the students average The absorption rate is 70 percent , the quality indicator is 44.8 percent . organization Mathematics from science this is the k o ' indicator that it is even lower determined .

The second one is ours. there is PISA tasks in textbooks similar issue and examples PISA tasks and usually long and long texts using described , the real situation in them and problems solution to do method choice for mathematics to which department appeal to do There are no instructions about PISA tasks (text , picture , diagram) and tables , real link graphics) various in forms offer They are made . mathematician to the language o ' enter and solution after finding it more realistic conditions

with tied assessment and comment demand will be done . In our mathematics in their textbooks standard issues is given and they standard methods using solved .

It is clear from this As you can see , in the PISA program logical thinking main The student is called a student . For example , a student to the word " circle " in the text face Even if it's not a bride , it's true. this object what is being talked about realizing to reach So , first in line mathematics textbooks student logical to think encouraging issues with enrichment task to the surface We also have 130 more than nation and people representatives residence to do , education in 7 languages take Translation of "to go " additional on the matter difficulties to give birth possible .

WHY DO WE NEED THE PROGRAM?

15 years old children's knowledge level quantitative indicator k o ' fair determination and international scale with compare possibility is born ;

- about the students literacy and knowledge to put into practice ability development state and non-governmental organizations and parents collaborative activity coordination practice increases ;

- general education in schools created the conditions assessment on the surface quantitative indicators is determined .

In this place record to grow yes , according to PISA about students placed in knowledge rate every 50 points increase annual gross internal of the product one percent oh my to provide international in experiments is observed .

In a word in other words , this program our country youth intellectual potential further to increase service to do undoubtedly .

Conclusion in place this to say it is necessary , international assessment programs to practice application together national assessment system further to improve is achieved . The reader the youth literacy class impartially assessment , students received knowledge to practice application ability to practice application ability develop and education in institutions good quality education to give for enough the conditions create must . International in programs participation to grow student our youth knowledge quality where at the level developing to determine , that through result and efficiency directions by designating to take opportunity creates , national assessment system further develop international assessment in programs successful participation to reach provides .
