EDUCATING STUDENTS IN A NATIONAL SPIRIT BASED ON PEDAGOGICAL AND PSYCHOLOGICAL METHODS

(Using the Example of Music Culture Lessons)

Tuyunov Mizrof Oblakulovich
Uzbekistan Pedagogical Institute
Department of Music Education, Lecturer
Email: Tyunovmizrof@gmail.com

Annotation: This article examines various aspects of "educating students in a national spirit based on pedagogical and psychological methods." In particular, it discusses how, in the context of music culture lessons in secondary schools, a teacher's pedagogical and psychological skills can positively influence students' consciousness. It also explores the principles of instilling national values through education.

Keywords: family, upbringing, nation, education, pedagogical technology, physical and intellectual development, emotional perception, differential psychology, self-awareness, introduced tropology, moral and ethical values.

Introduction

Every nation has its own unique national tendencies that shape individuals' consciousness and upbringing. These tendencies are the product of national education. Establishing a system of national education requires a strong foundation in the pedagogical, psychological, and scientific principles specific to each region.

The core idea of this research is to analyze the pedagogical and psychological foundations of instilling a sense of national identity in university students. Understanding national identity is essential in the process of national education.

Throughout history, national education has evolved differently at each socio-historical stage. Many scholars and thinkers have contributed to the understanding of national identity. For example:

- Imam Al-Bukhari's "Al-Jami' al-Sahih", the second most authoritative source in Islam after the Quran.
- Ahmad Yugnaki's "Hibat ul-Haqaiq".
- Yusuf Khos Hajib's "Qutadg'u Bilig", a guide to happiness.
- Alisher Navoi's "Mahbub ul-Qulub", or "Beloved of Hearts."
- Abdulla Avloni's "Turkiy Guliston" or "Ethics."

The Role of National Identity in Upbringing

In modern Uzbekistan, pedagogical discussions on national self-awareness are increasingly emphasized in media and public discourse. It is widely recognized that education must instill national values from an early age; otherwise, gaps may emerge in a person's moral and ethical development.

The environment plays a key role in an individual's upbringing—family, neighbors, and community life all contribute to shaping character. There is an Uzbek proverb: "A bird does what it sees in its nest," meaning that individuals mirror their upbringing.

Higher education institutions must nurture students who are patriotic, loyal to their nation, well-versed in traditions, and equipped to become educators themselves. These students will later transfer their knowledge and values to the next generation. As an old proverb states: "Learning continues from the cradle to the grave."

Education and National Initiatives

The President of Uzbekistan, Shavkat Mirziyoyev, issued Decree PF-5712 on April 29, 2019, introducing five key initiatives for youth development, which include:

1. Increasing young people's interest in music, literature, theater, and the arts.
2. Encouraging sports participation.
3. Promoting technological literacy.
4. Advocating for reading habits.
5. Enhancing women's employment opportunities.

The first initiative emphasizes that exposure to music, visual arts, literature, theater, and other cultural forms helps develop students' talents and national consciousness.

Literature Review

Uzbek musical traditions and national education have roots in ancient history. Scholars such as Abu Nasr al-Farabi, Abdurrahman Jami, Alisher Navoi, and Zahiriddin Muhammad Babur have addressed national education and self-awareness in their works.

Later, Yunus Rajabi's five-volume work "Uzbek Folk Music", along with M. Yusupov's collections of folk songs, helped preserve and document Uzbekistan's musical heritage. Scholars such as G. Najmetdinov, B. Karomatov, U. Inoyatov, M. Quranov, D. Sharipova, and H. Ibragimov have also studied the role of music in shaping national identity.

Methodology

Modern higher education integrates interactive learning techniques to analyze theoretical and national educational songs and poems. Key methodological approaches include:

- Analyzing teaching materials and adapting them to contemporary needs.
- Developing pedagogical models.
- Conducting surveys and pedagogical experiments.
- Assessing creative outcomes and adjusting content accordingly.

Findings and Analysis

Pedagogical psychology recognizes that personal development is a complex process influenced by both internal and external factors. In today's globalized world, an influx of information significantly impacts students' education and upbringing.

The field of music education plays a crucial role in shaping national consciousness. The teaching of music should be designed to enhance students' appreciation of their heritage and strengthen their national and universal values.

In Uzbekistan's higher education institutions, musical and aesthetic education is considered one of the key factors in shaping well-rounded individuals. Music education is essential for developing musical sensitivity and creativity, as "a person without musical training lacks musical abilities."

Conclusion

National education should be an integral part of modern pedagogy. Music education, combined with psychological and pedagogical methods, can significantly contribute to shaping a student's national identity. Higher education institutions must focus on developing students' national pride, fostering a deep appreciation of cultural heritage, and equipping future educators with the tools to pass these values on to the next generation.
