FOREIGN EXPERIENCES IN EDUCATIONAL MANAGEMENT: THE EXAMPLE OF THE HIGHER EDUCATION SYSTEM OF TURKISH STATES

Xasanova Mohimbegim Rakhmonjon kizi
Teacher of the Department of Education, Kokand University
Email: miss.mohim2002@gmail.com +998910562612 /

ANNOTATION

This article provides a comparative analysis of the experiences of higher education management in Azerbaijan, Turkey, Kazakhstan and Uzbekistan. During the study, the higher education management, educational standards and reforms of each country are studied and their effectiveness is assessed. The article analyzes strategies aimed at improving the educational process based on international experience and puts forward practical recommendations for adapting the higher education system of Uzbekistan to international standards. The research was methodologically conducted based on comparative analysis and statistical data, and common and different aspects of the education systems were identified.

Keywords: higher education, management system, international experience, Turkey, Azerbaijan, Kazakhstan, Uzbekistan, educational reforms.

Introduction

The education system is one of the most important areas that determine the future of every society. In today's age of globalization and innovation, the higher education system needs to be constantly improved, enriched with new approaches and mastered modern management mechanisms. In order to improve the quality of education and effectively organize the management system, different countries of the world are developing and implementing their own experiences. In particular, the higher education system of the Turkic countries has been developing rapidly in recent years and is experiencing significant changes at the regional and international levels.

Historically, the Turkic peoples have their own traditions of science and education, which began with the reign of Amir Temur. At that time, madrasahs, libraries and scientific centers played an important role in the development of science and education. Today, Turkic countries are reforming their education systems, paying special attention to the introduction of advanced technologies, adapting the educational process to international standards and implementing digital transformation. International cooperation, academic mobility and innovative methods of education management serve to increase the quality of education and its global competitiveness.

A comparative analysis of the higher education systems of Azerbaijan, Turkey, Kazakhstan and Uzbekistan allows us to identify the processes of educational reforms, management models and the introduction of innovative technologies being implemented in these countries. While higher education in Turkey was formed in accordance with the requirements of the Bologna process [1], in Kazakhstan the principles of academic independence have been strengthened. [2]Azerbaijan pays great attention to the development of international cooperation and the implementation of joint programs with foreign

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-3

universities. In Uzbekistan, in recent years, fundamental reforms have been carried out to modernize the higher education system, improve the quality of education and digitize the management system.[3] This article studies the best practices of Turkic countries in managing the higher education system and analyzes their effectiveness. The research uses methods of comparative analysis, statistical data study, and legal framework analysis. The article also highlights the specific features of the education system of each country, its current problems, and prospects, and puts forward practical recommendations for adapting international practices to the higher education system of Uzbekistan.

Methodology

This study provides a comparative analysis of the experiences of higher education management in Turkic countries. Comparative analysis, statistical data study and analysis of legal documents were identified as the main methodological directions as research methods. The development trends, management models and international integration processes of the higher education systems of Turkic countries - Azerbaijan, Turkey, Kazakhstan and Uzbekistan were studied in depth.

The research primarily used the method of comparative analysis. This method made it possible to identify differences and similarities in the higher education systems of Turkic countries, to highlight effective models of educational process management. In particular, the organization of the educational process in Turkey and Kazakhstan based on the Bologna process, the great attention paid to the international accreditation processes of universities in Azerbaijan, and the measures taken in Uzbekistan in recent years to reform the higher education system were compared.

In addition, an attempt was made to obtain more in-depth information about the higher education system of the Turkic countries by analyzing statistical data. The study was based on reports from prestigious international organizations such as UNESCO, OECD and QS World University Rankings. For example, in the 2024-2025 academic year, Turkey's leading universities ranked high in prestigious rankings such as QS World University Rankings and Times Higher Education World University Rankings . This is a result of the attention paid to education and scientific research in the country.

According to the QS World University Rankings 2025 , Middle East Technical University (285th), Istanbul Technical University (326th), Koç University (401st), Boğaziçi University (418th) and Bilkent University (477th) are among the world's best universities. These results once again confirm the global competitiveness of Turkish higher education institutions.[4]

In addition, according to the Times Higher Education World University Rankings 2025 , Koç University, Middle East Technical University and Sabancı University are ranked between 351–400. Istanbul Technical University, Bilkent University and Boğaziçi University are also among the top 800 universities in the world. These results reflect the impact of reforms aimed at further enhancing Turkey's academic potential.[5]

Turkish universities, in addition to occupying high positions in international rankings, are also making significant progress in scientific research and innovative projects. In particular, Koç University offers full scholarship programs for master's and doctoral degrees. Sabancı University has created various scholarship opportunities for international students, while Bilkent University provides up to 100% scholarships for studies. This makes Turkish universities even more attractive internationally.

VOLUME-5, ISSUE-3

Such positive changes in the Turkish higher education system are helping to transform the country into a global center of academic cooperation. As a result of the active participation of universities in international research projects and the expansion of student exchange programs, Turkish higher education is further developing and strengthening its position in the world education system. Therefore, it is expected that the best universities in Turkey will occupy even higher places in world rankings in the future.

Kazakhstan's Nazarbayev University is recognized as one of the best higher education institutions in Central Asia. Although Uzbek universities are relatively new participants in international rankings, their development dynamics have increased significantly in recent years.[6]

Analysis of the legal framework was another important methodological direction of the study. The decisions and programs adopted by each state on the management of higher education were analyzed. For example, on the basis of the Decree of the President of the Republic of Uzbekistan No. PF-5847 dated October 8, 2019 on approval of the Concept for the Development of the Higher Education System of the Republic of Uzbekistan until 2030, [7]a number of reforms are being implemented to modernize educational processes and bring them into line with international standards. In Kazakhstan, [8]the goal is to introduce innovations in the higher education system, expand international scientific cooperation, and increase the autonomy of universities based on the "New Education Strategy - 2050" program.

The study also examined the mechanisms of financing, quality assessment and management of the higher education system in each country. While Turkey has a wide range of state funding, Kazakhstan has a well-developed practice of effective use of state grants and private sector investments. In Azerbaijan, the independence and self-governance of higher education institutions is rapidly developing.

Based on these methodological approaches, the research results were formed and the priority areas in the higher education system of each country were identified. The information obtained during the research served to objectively assess the results and determine the possibilities of using the higher education system of Turkic countries in the conditions of Uzbekistan.

Results

The higher education system of Azerbaijan has undergone serious reforms since gaining independence. The higher education system in the country is being modernized and brought into line with international standards. Currently, Azerbaijani universities have academic independence and have broad opportunities for the development of scientific research and international cooperation. The country's education system has adapted to global standards and pays great attention to innovative projects and modern research. These changes have led to the strengthening of the position of Azerbaijani higher education institutions in the international arena.

Three Azerbaijani universities have been included in the QS World University Rankings for 2024-2025, the world's most prestigious university rankings. They include Baku State University (951-1000), Azerbaijan State University of Economics (1001-1200), and Azerbaijan State Oil and Industry University (1001-1200). [9]These results reflect the efforts of Azerbaijani universities to improve the quality of education, develop scientific research, and expand international cooperation.

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-3

In the context of globalization of education, the participation of universities in international rankings is of great importance not only for scientific development within the country, but also for increasing the prestige of Azerbaijan in the global academic community. This process allows expanding the academic opportunities of professors, teachers and students, strengthening cooperation with foreign universities, and joining international scientific projects.

Therefore, the international recognition of Azerbaijani universities is a sign of the country's consistent development in the educational and scientific spheres. In the future, it is expected that more universities will be included in the world's prestigious rankings. This will further improve the quality of education and bring scientific innovations to a new level. The Azerbaijani higher education system is developing on the basis of the credit-module system, which serves to train personnel in accordance with international standards. Also, the government of the country pays great attention to expanding cooperation with foreign universities, establishing double diploma programs and developing student exchange in order to bring higher education to an international level.

The Turkish higher education system is fully integrated into the European Higher Education Area, and the country joined the Bologna Process in 2001. This has ensured that the academic programs of Turkish universities are aligned with international standards, transition to a credit system, and diplomas are recognized in any European country. There are more than 200 universities in the country, of which Middle East Technical University (285th place), Istanbul Technical University (326th place), Koç University (401st place), Boğaziçi University (418th place) and Bilkent University (477th place) are among [10]the best universities in the world . These results once again confirm the global competitiveness of Turkish higher education institutions.

In addition, according to the Times Higher Education World University Rankings 2025 , Koç University, Middle East Technical University and Sabancı University are ranked between 351–400. Istanbul Technical University, Bilkent University and Boğaziçi University are also among the top 800 universities in the world [11]. These results reflect the impact of reforms aimed at further enhancing Turkey's academic potential.

Although the higher education system in Turkey is state-funded, the number of private universities is also increasing. For example, Sabanci University , Koç University , and Bilkent University have world-class educational programs and are actively involved in student exchange programs, innovative research projects, and international grants. In addition, Turkey has various grant and scholarship programs for foreign students, and the country welcomes thousands of international students every year.

The higher education system of Kazakhstan has developed significantly in recent years and is gaining high international rankings. In 2010, the country joined the Bologna Process, which allowed it to bring the educational process into line with international standards. Today, Nazarbayev University is recognized as one of the leading universities in Central Asia, with a proven track record in attracting international faculty, teaching in English, and conducting cutting-edge research. Al-Farabi Kazakh National University and the Kazakh-British Technical University also occupy high positions in international rankings. The higher education system in Kazakhstan is supported by the state, while attracting private sector and international investment. The government is implementing

VOLUME-5, ISSUE-3

comprehensive reforms to introduce digital technologies into the higher education sector, develop distance learning systems, and develop educational platforms based on artificial intelligence.

Uzbekistan's higher education system has undergone fundamental reforms over the past five years. Since 2017, the number of state-owned higher education institutions has been significantly increased. Uzbekistan's higher education system has been developing rapidly in recent years, striving to strengthen its position in the international academic community. The results of the 2025 QS World University Rankings demonstrate significant progress in increasing the international prestige of the country's higher education institutions.

According to the results of this ranking, the National University of Uzbekistan named after Mirzo Ulugbek was ranked between 781–790. Also, the Tashkent Institute of Irrigation and Agricultural Mechanization Engineers, National Research University, was ranked between 800–1000. The high results achieved by these universities are the result of efforts to improve the quality of education, develop scientific research, and expand international cooperation.

In addition, according to the results of the QS World University Rankings by Subject 2025 , 5 higher education institutions from Uzbekistan are included in the list of the world's top 1,000 universities in 8 subject areas. This indicates that the country's higher education system is internationally recognized not only in general rankings, but also in individual fields.

Table 1:

In the 2025 ranking, 5 higher education institutions of the Republic of Uzbekistan were included in the list of Top 1000 universities in 8 subject areas.[12]

#	University name	Direction (Science)	Ranking (2025)	Ranking (2024)

VOLUME-5, ISSUE-3

Also, according to the results of the QS Asia University Rankings 2025, 23 universities in Uzbekistan are among the most prestigious higher education institutions in Asia. This result indicates that Uzbek universities are expanding their influence regionally and globally.

The high ranking of Uzbekistan's higher education institutions in international rankings is the result of reforms aimed at increasing the country's scientific potential, aligning educational standards with international norms, and creating new opportunities for students. These results are expected to improve further in the future, as the Uzbek higher education system takes bold steps towards innovative approaches and global integration.

A credit-module system has been introduced in the higher education system of Uzbekistan, which has made the learning process more flexible and efficient for students.

The government of Uzbekistan has also accelerated the process of digitization in the higher education sector. The HEMIS system (Higher Education Management Information System) serves to automate management processes in higher education institutions. In addition, distance learning and online course platforms have been widely introduced, aiming to make the learning process more convenient for students and improve the quality of education. The government's permission to open private universities and the increase in the number of branches of foreign higher education institutions are also giving a great impetus to the globalization of the education system in Uzbekistan. For example, Webster University , MGIMO Tashkent branch and Inha University in Tashkent The opening of international universities such as has created opportunities for students to receive a global education.

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-3

In conclusion, the higher education systems of the Turkic countries are developing rapidly and are adapting to international standards. Azerbaijan is improving the quality of education by expanding cooperation with international universities. The higher education system in Turkey is fully aligned with the Bologna Process and is striving to become one of the most advanced universities in the world. Kazakhstan is developing its universities by introducing digital technologies and developing educational programs that meet international standards. Uzbekistan, meanwhile, has implemented significant reforms in its education system in recent years, taking comprehensive measures to strengthen cooperation with international universities and increase the academic independence of higher education institutions.

Analysis

As a result of the analysis of the management of the higher education system of the Turkic countries, the reforms and approaches they are implementing in the educational process have been identified. Each country is developing education development strategies in accordance with its social, economic and cultural conditions. As a result of the study of international experiences, a number of important conclusions have been drawn.

First, the issue of adapting to international standards and joining the Bologna Process remains one of the most important reforms among the Turkic countries. Turkey joined the Bologna Process in 2001, and Kazakhstan in 2010, and began to reform their higher education systems in line with international standards. This allowed them to use the academic credit system, recognize international diplomas, and expand student and faculty exchange programs.

Secondly, the issue of academic autonomy of universities is also one of the pressing issues in the education system of Turkic countries. In Turkey and Azerbaijan, universities are given the opportunity to develop their own educational programs, engage in international scientific projects, and gain financial independence . In Azerbaijan , ADA University and Baku State University have passed international accreditation and are striving to form educational programs based on global requirements. In Uzbekistan, although a number of reforms have been implemented in recent years to increase the academic and financial independence of universities, this process has not yet been fully completed.

Third, the introduction of digital technologies into the educational process is rapidly developing in Kazakhstan and Uzbekistan. In Kazakhstan, the use of artificial intelligence and big data technologies has been introduced in higher education institutions. E-learning platforms such as HEMIS (Higher Education Management Information System) and Moodle are helping to improve the inter-university management system. In Uzbekistan, the digitalization of higher education institutions is planned for 2021 within the framework of the “Digital Uzbekistan – 2030” strategy, and to date, electronic document management, distance learning, and artificial intelligence-based educational methods are being introduced in universities.

Fourth, the education financing system is also an important issue for the Turkic countries. Although state grants are widely used in Turkey, the increasing number of private universities is leading to the dominance of market principles in the education system. In Kazakhstan, the state grant system is developed, and the private sector is also investing in education. In Azerbaijan, universities have financial independence and are able to develop their own grant and scholarship programs. In Uzbekistan, a number of reforms are being implemented to diversify the higher education system and support the development of private universities.

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-3

Discussion

An in-depth analysis of the higher education systems of Turkic countries shows that these countries are actively using international experiences to improve their national education systems. It is also of great importance for Uzbekistan to study and implement these experiences. The following key aspects are of particular interest:

Adaptation to international standards and the Bologna process: The experience of Turkey and Kazakhstan shows that developing international academic cooperation, establishing student and professor exchanges, serves to improve the quality of higher education. Although Uzbekistan is also taking steps towards this process, these reforms need to be further deepened.

Academic independence of universities: It is important to grant universities financial and academic autonomy to improve the quality of education. The experience of Turkey and Azerbaijan shows that autonomous universities have the opportunity to shape their programs based on international requirements and become globally competitive. It is necessary to continue the reforms initiated in Uzbekistan in this regard.

Digital transformation: E-learning systems are being introduced in universities in Kazakhstan and Uzbekistan. The HEMIS system, Moodle platforms, and the organization of the educational process based on artificial intelligence are also actively developing in Uzbekistan. However, it is important to further accelerate this process, train professors and teachers in digital competencies, and adapt students to modern technologies.

Financing education: While Turkey and Kazakhstan have developed a system of state grants, the private sector is also actively involved in this process. In Uzbekistan, by strengthening cooperation between state grants and private universities, the quality of education can be improved and sustainable development can be ensured.

International integration: The opening of branches of international universities in Uzbekistan and the introduction of joint programs are contributing to the development of international integration. The experience of Turkey and Kazakhstan shows that access to international rankings, increased academic mobility, and participation in international scientific projects will take the education system to a new level.

In conclusion, the analysis of the educational systems of Turkic countries and the introduction of best practices in the conditions of Uzbekistan will serve to improve the quality of higher education. In the future, it is advisable to use the experience of academic independence of Turkey and Kazakhstan, Kazakhstan's strategy for the implementation of digital technologies, and Turkey's approaches to international integration in the development of the higher education system of Uzbekistan.

CONCLUSION AND RECOMMENDATIONS

Analysis of the higher education systems of the Turkic countries shows that each country has developed specific strategies for reforming and developing education in accordance with its own conditions. Although the higher education systems of Azerbaijan, Turkey, Kazakhstan and Uzbekistan have common features, each of them has its own specific development direction. An in-depth analysis of the higher education systems of these countries is of great importance for Uzbekistan in studying and adapting international experience.

First, adaptation to international standards is one of the main directions of reforms in the higher education sector of the Turkic countries. The higher education systems of Turkey and Kazakhstan are fully aligned with the requirements of the Bologna Process, and they are leaders in the development of international academic cooperation and student exchange. Although Uzbekistan is also taking steps

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-3

towards this process, it is necessary to fully implement all the requirements of the Bologna Process and increase the level of international recognition.

Secondly, the academic and financial independence of universities is one of the important factors for improving the quality of education and ensuring innovative development. In Turkey and Azerbaijan, the academic independence granted to universities allows them to shape educational programs based on their own needs and international requirements. In Uzbekistan, reforms aimed at increasing the independence of universities have also been implemented in recent years, but more in-depth reforms are required in this regard. It is necessary to ensure the financial autonomy of universities and support the sustainable development of higher education institutions by attracting private sector funds along with state grants.

Thirdly, digital technologies and distance learning have become an integral part of the higher education system in recent years. E-learning systems are being widely introduced in universities in Kazakhstan and Uzbekistan. In Uzbekistan, the HEMIS system serves to automate management processes in higher education institutions, but it needs to be further improved, create a convenient interface for professors, teachers and students, and enrich the educational process with innovative technologies. It is also possible to improve the quality of education by developing distance learning and introducing interactive learning platforms.

Fourth, international cooperation and academic mobility are an important component of the higher education system of the Turkic countries. Universities in Turkey and Kazakhstan occupy high places in international rankings and actively participate in international scientific projects. The opening of branches of international universities and the introduction of joint programs in Uzbekistan in recent years have a positive impact on the integration process. However, it is necessary to expand international scientific cooperation, develop relations with influential international organizations, and expand the opportunities for foreign students to study in Uzbekistan.

Therefore, the following main recommendations can be made for the development of the higher education system of Uzbekistan:

1. to fully comply with the requirements of the Bologna Process - to take a place in international rankings and ensure the international recognition of diplomas, it is necessary to strengthen the credit system, academic mobility, and diploma nostrification processes.
2. Expanding the academic and financial independence of universities - it is necessary to increase the opportunities for higher education institutions to develop independent educational programs, attract innovative projects and grants.
3. Further development of digital technologies - it is necessary to enrich the educational process with innovative technologies by improving the HEMIS system, introducing distance learning platforms, and creating e-learning resources.
4. to develop international cooperation and scientific integration - to create joint programs with prestigious international universities, create conditions for professors and teachers to gain international experience, and expand opportunities for financing scientific research through international grants.
5. to diversify sources of education funding - to increase the financial stability of universities through government grants, private sector funding, and cooperation with international funds.

In conclusion, the higher education systems of the Turkic countries are developing using international experience, and Uzbekistan is also actively participating in this process. By implementing the above

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

recommendations, the country will have the opportunity to take its higher education system to a new level, improve the quality of education, and take a worthy place in the global educational space.
