Annotation

In the article, there are several important aspects that should be widely paid attention to the development of the philosophical worldview of young people. They are associated with the development of the critical thinking abilities of young people, the formation of their moral principles and giving deeper insights into life issues. Below are the main aspects that should be addressed in this regard:

Keywords: worldview, philosophy, spiritual and moral, secular and religious knowledge.

Relevance of the topic: the development of a philosophical worldview of young people is an important factor in their formation as an intellectually, spiritually and morally mature person. The philosophical worldview expresses a person's ability to deeply understand and reflect on life, being, Society and oneself. This process is carried out by developing the critical thinking of young people, expanding their secular and religious knowledge, and teaching a philosophical approach to life issues. **A philosophical worldview helps to understand who young people are, their goals and values in life. Through self-awareness, a person finds his place in life and strives for independent thinking.**

Philosophy helps people to critically assess any information, seek truth, and draw conclusions. Through this, young people will have the opportunity to take a deeper approach to events than to imitate them.[2,2]

A philosophical look will help you look for solutions to complex questions in life. For example, people can think deeply about topics such as happiness, justice, goodness and make more specific decisions when choosing their own life paths.

Problem solving methods

1. **Giving philosophical knowledge through the educational system:** introducing philosophical disciplines in schools and universities and teaching them in an interesting form teaches young people to think critically and apply philosophical knowledge in practical life. Such knowledge should include such areas as the main areas of Philosophy — Ethics, epistemology (science), ontology (science of being).
2. **Debate and debate organization:** organizing debates and debates among young people increases their ability to approach various issues from a philosophical perspective. In the process of thinking, he develops the skills to learn different views and form his own point of view.
3. **The study of philosophical ideas through art and literature:** art and literature are important means of conveying philosophical ideas. For example, philosophical works, fiction, theater, cinema and other types of Art help to expand the worldview of young people.
4. **Personal role models and mentors:** young people are often formed under the influence of mature individuals around them. Teachers, parents and mentors with philosophical thinking are role

models for young people. Their opinions and views contribute to the formation of a philosophical worldview among young people.

In the Global world, young people need to be familiar with different cultures, religions and philosophical currents. This helps to form Life Principles and values that are more relevant to them. The multicultural approach educates young people as tolerant, tolerant, and individuals who value diversity.

Factors that prevent the development of a philosophical worldview

1. Insufficient study of philosophical knowledge in some educational systems can reduce youth's interest in the field.

2. Sometimes there may be social or cultural restrictions that prevent young people from thinking independently. This makes it difficult for a personal point of view to be formed in them.

3. In the technological age, young people are often used to obtaining quick information, and this can weaken the ability to devote time to deep thinking**.**

In conclusion, the development of a philosophical worldview of young people is of great importance in their personal and social life. Through this process, young people realize themselves, expand their worldview and help to clearly define their place in society. Therefore, it is necessary to pay great attention to philosophy in education, upbringing and cultural life. Young people should be able to analyze any idea and knowledge through critical thinking, ask questions and draw independent conclusions.

• Young people need to learn in-depth by asking questions about various information, philosophical thoughts and events.

• The ability to analyze alternative views should be increased, rather than a one-sided approach to any issue. It helps to have a more open mind and a deeper understanding of complex issues. It is important for young people to understand who they are, their role in life and their purpose. In the process of forming a philosophical worldview, attention should be paid to the following aspects:

• Young people should understand their life goals and be trained to philosophically analyze the ways to achieve them.

• At each age, it is necessary to strengthen specific moral principles and values. This will help them choose the right direction in life.

Young people should deeply study moral principles through the qarsh of the philosophical world and direct their actions on their basis. In the formation of moral values: [4,1]

• Teaching young people to think deeply about moral concepts such as goodness, justice and honesty.

• An in-depth study of religious and philosophical knowledge to boost spirituality, with an emphasis on understanding how they affect life.

Philosophical and artistic literature plays an important role in finding answers to deep thinking and life questions of young people. Therefore:

Encouraging young people to read ancient and modern philosophical works. For example, works such as Plato's “state” or Newtshe's “Zoroastrian said so” develop philosophical views in young people. To develop the philosophical worldview of young people, many aspects such as critical thinking, moral values, self-awareness, the study of various philosophical and cultural principles, acquaintance with fiction and philosophical works require extensive attention. At the same time, increasing the abilities of independent thinking through arguments and discussions, the role of teachers and coaches is of great importance.[3,1]
