2nd year master's student, specialty "Library and Information Activities (Librarianship and Bibliography)" of the Uzbek State Institute of Arts and Culture

DIGITAL LIBRARIES AND THEIR INTEGRATION WITH TRADITIONAL LIBRARIES

Abstract: Digital technologies play an important role in increasing the efficiency of library services, creating wider opportunities for users and ensuring open access to scientific information. This article analyzes the development of digital libraries, their integration with traditional libraries and their impact on the field of librarianship. The digital transformation of Uzbek libraries, existing problems and recommendations for their solution are given.

Key words: digital libraries, traditional libraries, integration, information technologies, libraries of Uzbekistan.

Аннотация: Цифровые технологии играют важную роль в повышении эффективности библиотечных услуг, создании более широких возможностей для пользователей и обеспечении открытого доступа к научной информации. В статье анализируется развитие электронных библиотек, их интеграция с традиционными библиотеками и их влияние на сферу библиотечного дела. Даны рекомендации по цифровой трансформации узбекских библиотек, существующие проблемы и пути их решения.

Ключевые слова: электронные библиотеки, традиционные библиотеки, интеграция, информационные технологии, библиотеки Узбекистана.

With the development of digital technologies, the demand for information resources is growing. Modern libraries operate as platforms that expand the possibilities of providing not only printed books, but also electronic resources, digital databases and services via the Internet. The resolution of the President of the Republic of Uzbekistan dated September 14, 2020 "On measures to develop the information library sector" is of great importance in this direction.

Although traditional libraries still play an important role, they are not fully integrated with digital libraries. The main goal of the study is to develop this integration and create an effective model in the conditions of Uzbekistan.

This article uses analytical and statistical methods. Innovations in libraries around the world, digital services of the National Library of Uzbekistan named after Alisher Navoi, as well as trends in the use of information technologies by users were studied. Research conducted in the National Library of Uzbekistan and university libraries was widely used.

Let's look at the advantages of digital libraries through the following examples.

24/7 service availability: Unlike traditional libraries, digital libraries allow users to access information at any time and place.

Wide range of resources: Availability of scientific articles, e-books, audio and video materials.

Adaptive service to users: Providing personalized recommendations using artificial intelligence.

The following strategies are important for integrating digital libraries with traditional libraries:

• Hybrid libraries – the combined use of digital and printed materials.

• Data exchange – creating an electronic data exchange system between global and local libraries.

• Electronic catalogs – linking digital libraries with National Library catalogs.

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

• Artificial intelligence and Big Data analysis – creating a recommendation system based on users' search habits.

Let's analyze the state of integration in Uzbekistan's libraries. In 2023, the National Library of Uzbekistan provided users with more than 400 thousand digital resources (data from the National Library of Uzbekistan, 2023). Also, some university libraries have electronic resources linked to Google Scholar and Scopus.

Globally, digital libraries such as The British Library, Library of Congress, and Google Books are leading the way. In Uzbekistan, this process is not yet fully developed. The main reasons for this are:

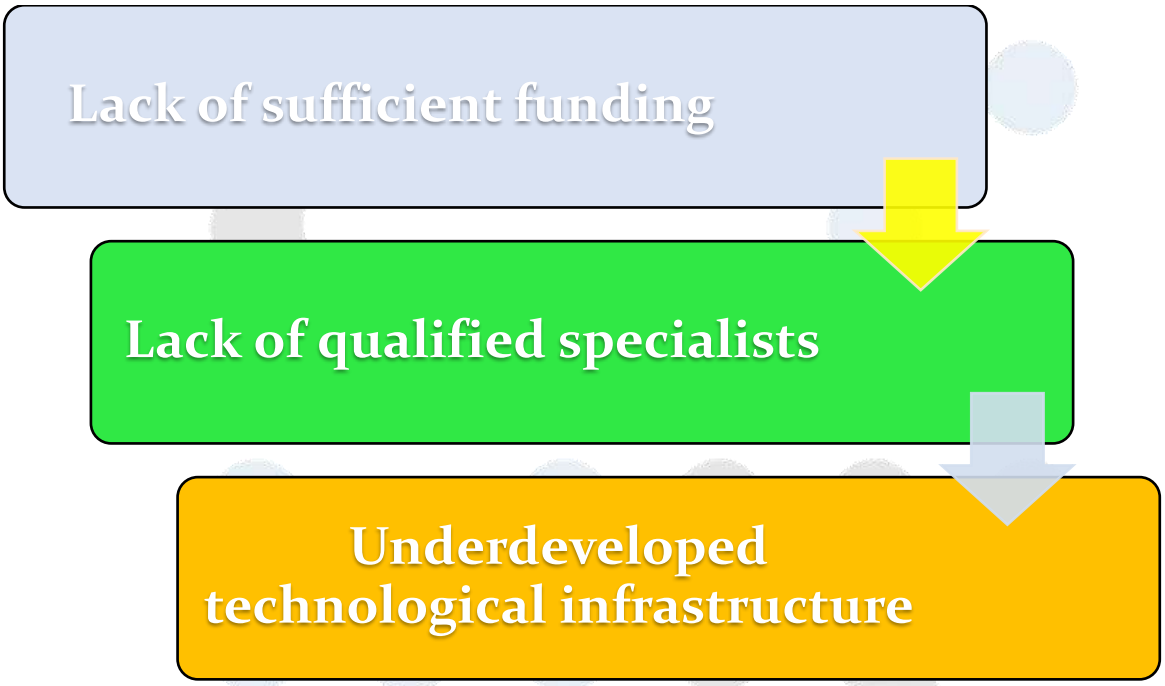

Table 1

Therefore, it is necessary to study international experience and modernize Uzbek libraries.

The development of the integration of digital libraries and traditional libraries can be implemented through the following strategies:

• Expansion of state-level programs - creation and development of digital library infrastructure.

• Development of electronic platforms - formation of an open electronic library system for universities and scientific institutions.

• Expansion of international cooperation - integration with scientific databases such as Scopus, Web of Science and JSTOR.

• Training of specialists - introduction of courses on digital technologies in library science.

Thus, the integration of digital libraries and traditional libraries creates new opportunities for scientific and educational institutions in Uzbekistan. Systematic work in this direction will greatly contribute to the development of science and education.

The integration between digital libraries and traditional libraries has become one of the most pressing issues in the library sector today. Digital libraries, while providing online access to information, allow for collaboration with existing resources and services of traditional libraries, improving the quality of their service to users.

Also, in the process of integration, traditional libraries can adapt their services to the digital environment and provide users with more advanced services, such as virtual exhibitions or remote consultations. This will enhance the synergy between libraries and facilitate information exchange.

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-4

In conclusion, the integration between digital libraries and traditional libraries is becoming more and more important with the development of information technologies. Their combination will lead to innovations in the library sector and an increase in the quality of service to users. This integration will ensure the complementarity of digital and physical resources, as a result of which libraries can become active and developing systems that meet the needs of modern society.
