ANNOTATION

In this article, the author conducted a pedagogical experiment to improve the special physical fitness of highly qualified core pushers in the F33 and F34 classifications. At the same time, they used a dynamometer to measure hand muscle strength in the experiment and developed their training according to the results of the research.

Keywords: classification, shot put, dynamometer, special physical training.

Relevance . Para is light. athletics today's on the day on the world sports field big attention has is , every kind physical opportunity limited athletes potential manifestation in the end important place This sport is in the composition core push according to competitions high level technique , strength , balance and explosive actions demand In particular , the classifications F33 and F34 belonging athletes for core push technique and muscle power to oneself typical approach requirement It is classified as F33. belonging athletes mainly hand and on the shoulder control limitations with together , bottom body members function very weak F34 athletes and a little relatively stronger in case is , bottom in the members voltage exists , but they are also mainly in a wheelchair or special in equipment exercise they do .

This because of this athletes to the competition preparation in the process special physical to prepare separately attention focus necessary . Core in pushing arms and shoulders strength , body stability and explosive power enough at the level developed to be F33 –F34 classification athletes for effective and scientific based special physical preparation styles working exit not only sports results to improve , maybe their movement coordination and health also serves to strengthen does .

It's light. athletics core push direction in the classifications F33 and F34 according to athletes number increasing progress , this sport world and national on a scale in competitions wide being used shows . This with together , this in the classification athletes physical opportunities various happened for them effective preparation system so far enough deep unexplored . Many training methodologies general to the approach based is individual and nosological features complete in consideration This is not possible . athletes in competitions to the results directly impact shows .[3;5;150-152-p.]

That's why for , in the classifications F33 and F34 core pushers for special physical preparation improvement , their individual characteristics in consideration received without training complex working exit current from issues one of them . In this regard scientific research sports medicine , rehabilitation , sports biomechanics and para sports theory further enriches . This of the subject scientific in terms of to be studied not only athletes for , maybe coaches , sports doctors and physical preparation experts also practical for importance has .[1; p. 94-99,7; p. 568-570, 14; p. 38, 6; pp. 654-656]

Research purpose : in the classifications F33 and F34 core pushers special physical readiness develop

Research Function : F33 and F34 classification core pushers physical and functional preparation indicators analysis to do

- Special physical readiness develop for scientific and practical recommendations to give

Classifications F33 and F34 high qualified core pushers special physical readiness improvement for before physical status determination need . That's why for their special physical indicators determination for from a dynamometer used and initial indicators received .

Classifications F33 and F34 high qualified core of the pushers hand strength on a dynamometer taken initial indicators

No.	FISH	Age	Gender	Right hand indicator	Left hand indicator	Standard
1	D- va , M	25	A	26.9 kg	24.5 kg	25.6-41.4
2	X -va , G	33	A	17 kg	19.6 kg	21.5-35.3
3	M -va , V	23	A	30.9 kg	30.1 kg	21.5-35.3
4	H -va , J	22	A	25.3 kg	24.5 kg	21.5-35.3
5	S -va , N	24	A	32.1 kg	30 kg	21.5-35.3
6	D -ov , S	27	E	62.8 kg	58.6 kg	25.6-41.4
7	R -ov , U	25	E	59 kg	53.7 kg	25.6-41.4
8	P -va,G	22	A	28.3 kg	25.5 kg	21.5-35.3
9	F-ov,K	24	E	50.6 kg	43.9 kg	21.5-35.3
10	T-ov,D	25	E	44.8kg	39.8kg	25.6-41.4

Given this in the table high qualified bribe core of the pushers hand power on a dynamometer determined . Right and left hand power in 3 attempts will be done and average indicator is determined . Every one participant normative indicator young and to the body related without is considered .

Received information analysis to do If we are , the dominant hand all in respondents right hand That's it . Individual to the table in a way approachable if we are ,

Right hand indicators looking if we are , the most strong participant : S- and N (62.8 kg), lowest indicator : X- and G (17 kg) determined . Average power level many Participants weigh around 25–45 kg . Left hand indicators looking if we are , the most strong left hand : S- and , N (58.6 kg) and lowest score : X- and G (19.6 kg). Dominant hand often right hand is , this from indicators is felt . S- and , N, D- ov , S, T- ov ,D such as participants designated from standard (25.6–41.4 kg) much high to indicators This is their high sports training and power from the level evidence gives . X- and , G, H- and , J, D- and , M as athletes indicators and to the standard close or lower . Male athletes between power level usually higher . S- and N (32.1 kg) and T- and D (44.8 kg) athletes especially strong results X- and G (17 kg) athlete power and out of the norm much lower, this and probable rehabilitation , injury or light training in the phase because it is evidence to give possible.Some in athletes (for example , X and G) hand of strength low and right and left hand between imbalance This is the case :

A) Muscles weakening

B) Core throw of the technique breakdown

C) Injury of danger increase such as to the circumstances take is coming .

VOLUME-5, ISSUE-4

All to athletes power indicators from the NORM high . But this muscles shrunken time elongated , elastic decreased to BE possible . That's why for to them more stretching exercises recommendation will be done .

Conclusion . Classification F33–F34 athletes between male athletes power indicators much high is , their core in throwing efficiency high to be possible . X- and G -athlete hand power much lower, this and separately training through strength restoration and increase the necessity shows . Athletes most of to the standard suitable or high to the results yes , this and their high qualified core throwers as readiness shows . Right and left hand power between difference dominant hand of athletes with related is , symmetry level athlete's general readiness and muscle balance shows .
