Key words: digitalization, economy, higher education, modernization, market conditions, innovation.

INTRODUCTION

Currently, in international practice, a significant part economic activity has gone online, and the demand for reliable information products and systems has increased. The importance of reforms in the field the formation and development of the digital economy has become very relevant the moment of independence in the Republic. 2020 in Uzbekistan declared the “Year of Development of Science, Education and the Digital Economy” and in our country is resolutely continuing reforms in all areas, aimed at building a new Uzbekistan. The development of the digital economy is a priority for increasing capabilities of each country, so using existing opportunities for the application of digital technologies in economic development each country is considered a pressing issue of our time. This process over a long period of time determines the scale of economic development and society, leads to radical changes in people's lives.

LEVEL OF STUDIES OF THE PROBLEM

The economic and social development of Uzbekistan today is associated with the degree of digitalization, which determines competitiveness in the global arena. Given the experience of world economic leaders, in recent years The reforms carried out in Uzbekistan were accompanied by the active introduction modern information and communication technologies in the process higher education. One of the main conditions for large-scale public investment in the implementation of digital technologies is assess the contribution of the relevant activity to economic growth from the point of view in terms of cost-benefit ratio. Regardless of the scenario economic development, guarantees of sufficient return on investment are needed such investments to justify, the feasibility of their implementation. The core The digital economy is the sector of production of digital goods and provision of digital services. It is assumed that the digital economy will increase Uzbekistan's gross domestic product by at least 30% and a sharp reduction in corruption, and savings of 25-30% can be achieved through monitoring and control of electrical networks using information and communication technologies. Given the importance process of digitalization of the economy, it makes

sense to dwell on it in more detail look at the essence, methods and forms of its current implementation. For ensuring sustainable development of society, its digitalization at different hierarchical levels of the management system is the most important condition, along with such factors and conditions as ensuring security, satisfaction of material needs, formation of effective social relations, poverty reduction, reduction of differentiation income and other factors. and conditions. Obviously, this can be done only for a sufficiently long period of time. To achieve the goals of sustainable social development must be achieved strategies and policies that balance different aspects of society, such as economic growth, social development and ecological balance. At the same time, it is clear that the decisive role in the process of achieving sustainable development of society through the formation of a long-term balance between modern play a role in social development and the natural environment technologies, with a particular emphasis recently on logistics the basis of digitalization is ICT (information and communication technologies) that emerged in relation to this type of technology in the late 1990s. 19th century and the first years of this century.

MAIN PART

Taking into account the reforms carried out in our Republic in the field of digitalization, integrated information systems have already been created to provide interactive services in the field of public procurement, more than 25.6 thousand km of fiber-optical communication lines. More than 67 percent of the country's population, or 22.5 million users have access to the World Information System the Internet network, and the number of third and fourth generation users mobile communications exceeded 16 million subscribers. Based on the relevance this problem, the state is taking large-scale measures development of the digital sector of the economy, the introduction of electronic systems document flow, development of electronic payments and improvement regulatory framework in the field of electronic commerce. In accordance with The Law of the Republic of Uzbekistan 'On Electronic Commerce', electronic Commerce is the purchase and sale of goods (works, services) carried out in in accordance with the agreement concluded using information systems. Creating a favorable ecosystem for the development and implementation digital technologies are increasingly influencing both the country's economy and society. The gradual introduction of appropriate digital solutions entails improves the quality of life of the population, leads to effective and transparent construction of public administration mechanisms, in in particular, increasing economic efficiency, reducing the level corruption components, the share of the shadow economy and much more. In this regard, today the digital transformation of all sectors of the economy is one of the priorities of any developing state. Educational activities that promote digitalization and implementation relevant technologies in the educational system include: -Widespread implementation of webinars, online, blended learning, technologies flipped classroom, as well as the implementation of the E-MINBAR platform; -Downloading to electronic media, using cloud technologies; -Development of distance learning programs; -Organization of a system of training in digital economy.

RESULT

Currently, about 29,000 people are employed in the ICT sector in the Republic of Uzbekistan. people working in 1,400 enterprises, whose total contribution to GDP is 2.2%. Today, IT specialists make up about 1% of the total employed population of the country, and by 2025 it is planned to increase this figure is up to 2.5-3%, which corresponds to the global average. In 2020 the number of internet users increased by 1.2 million people in the year. compared to 2018, the number of social media users in the country grew by 44% over the same period, and the number of mobile connections increased by 76%. The total volume of communication and information services (wired and mobile

communications, Internet, satellite communications services, etc.) Uzbekistan in 2020 is 12101 billion soums, which is 8.9% more, than in the previous year. In general, the following list of effective measures can be identified: implemented by states and aimed at developing digital economy, which, in our opinion, should include the following: -Creation of scientific and social networks; -development of industrial and social infrastructure and its various elements; -Characteristics of all types of barriers in the digital system of objects economics; -Ensuring the security of digital infrastructure; -Assessment of various risks associated with the digitalization process; -Training and retraining of specialists in the field of digitalization; -Development of education related to information security; -Investments and innovations in the information sector of the economy.

CONCLUSION

In conclusion, I would like to note that in our country it is planned to create Commission for the Coordination of Development of the Digital Economy, which will develop a concept for the development of "Digital Uzbekistan" until 2030. further development telecommunications infrastructure, providing high-quality mobile communications, broadband access Internet for the population. First of all, it is necessary to completely to digitize the spheres of construction, energy, agriculture and water management, transport, geology, cadastral survey, health care, education and archives. this is the 'Electronic Government' system, programs and projects, implemented within its framework should be subject to critical review understanding, and all organizational and institutional issues should be comprehensively resolved. This will allow us to implement in the future innovative projects based on public-private partnerships competitiveness of the economy based on its innovative development and modernization: in the field of digital economy and are aimed at supporting production of modern software products. Universities of Uzbekistan can and should play their role here, including in improving the system e-government in various fields of activity (for example, in healthcare, where the creation of electronic medical records, the transition medical institutions to the electronic format, as well as online patient counseling or creation of a unified information system electronic voter list and its implementation is expected throughout country. Digitalization economics Uzbekistan will increase competitiveness of our country in world markets, science and innovation will create the basis for the country's development.
