Ubaydullaeva Feruza Xamidullaevna

Abstract: Teaching uzbek to russian speakers is a crucial topic in Uzbekistan and other Central Asian countries, where a significant portion of the population speaks Russian as their first or second language. Since uzbek and russian belong to entirely different language families—uzbek being a turkic language and russian an indo-european language—the process of learning uzbek can be challenging for russian speakers. These languages differ significantly in phonetics, grammar, sentence structure, and vocabulary. For example, russian has six grammatical cases and relies on inflection, while uzbek is an agglutinative language where meaning is expressed through suffixes. Moreover, uzbek follows a subject-object-verb (SOV) word order, whereas russian typically uses a subject-verb-object (SVO) structure. Such differences require a strategic and methodical approach to language teaching.

Key words: foreign language teaching, russian speakers, communicative approach, grammar-translation method, lexical approach, phonetic training, linguistic interference, pronunciation difficulties.

Introduction: Despite these challenges, russian speakers also have certain advantages when learning uzbek. Due to historical and cultural exchanges, uzbek contains many loanwords from russian, which can facilitate vocabulary acquisition. Additionally, russian speakers are often already familiar with cyrillic script, which was historically used for uzbek before the latin alphabet became standard. These factors provide opportunities for more effective and engaging teaching methodologies.

This article explores the most effective teaching methodologies for russian speakers learning uzbek, focusing on phonetics, grammar, vocabulary acquisition, and communicative approaches. It also discusses common difficulties learners face and how to overcome them through modern pedagogical strategies and digital tools.

1.The communicative approach

The communicative approach prioritizes real-life language use rather than rote memorization of grammar rules. It focuses on developing speaking and listening skills to enable learners to use uzbek in practical situations.

Key principles:

• Context-based learning: Lessons are structured around real-life conversations, such as greetings, ordering food, and asking for directions.

• Role-playing and dialogues: Students engage in simulated interactions to practice common phrases.

• Task-based learning: Activities like problem-solving exercises and storytelling enhance comprehension and verbal expression[1].

• Use of audiovisual materials: Videos, recordings, and pictures help reinforce vocabulary and pronunciation.

Advantages for russian speakers:

2024-6.875 ResearchBib IF: 9.948 / 2024

• Helps overcome the fear of speaking by emphasizing communication.
• Encourages immersion in uzbek culture and language.
• Reduces reliance on direct translation, allowing learners to think in uzbek.

2. The grammar-translation method

This traditional method emphasizes the detailed study of grammar rules and direct translation between uzbek and russian. Since russian speakers already have a strong grammatical foundation, this method helps them systematically understand the differences and similarities between the two languages.

Key principles:

• Explicit grammar instruction: Students analyze verb conjugations, noun cases, and sentence structures.
• Direct translation exercises: Texts are translated between uzbek and russian to build vocabulary and comprehension.
• Reading and writing focus: Written assignments reinforce grammatical knowledge.

Advantages for russian speakers:

• Provides a structured learning approach.
• Enables learners to develop reading and writing proficiency quickly.
• Helps russian speakers identify common linguistic patterns between the two languages[2].

3. The audiolingual method

The audiolingual method emphasizes repetitive drills and listening comprehension, making it effective for beginners.

Key principles:

• Repetition and memorization: Students listen to recorded phrases and repeat them multiple times.
• Pattern drills: Learners practice sentence structures through substitution exercises.
• Minimal grammar explanation: Instead of explicit grammar instruction, learners acquire patterns naturally through listening and speaking[3].

Advantages for russian speakers:

• Helps with correct pronunciation and intonation.
• Strengthens listening comprehension skills.
• Reduces dependence on written forms of language.

4. The interactive and technology-based approach

Modern language instruction benefits from digital tools and interactive methods that provide an engaging learning experience.

Key principles:

• Online platforms and apps: Language-learning apps such as Duolingo, Memrise, and Anki provide vocabulary-building exercises[4].
• Video lessons and multimedia resources: Educational videos with uzbek subtitles improve listening skills.
• Social media and language exchange: Students practice uzbek through online conversations with native speakers.
• Gamification: Interactive exercises and quizzes motivate learners.

Advantages for russian speakers:

• Provides flexible and self-paced learning opportunities.
• Engages learners with interactive and entertaining content.
• Encourages continuous practice outside of the classroom.

5. Comparative analysis of uzbek and russian for effective learning

Since Russian speakers already possess strong linguistic skills, comparing uzbek and russian grammar helps them acquire uzbek more efficiently[5].

Feature	Uzbek	Russian
Word order	Subject-object-verb (SOV)	Subject-verb-object (SVO)
Case system	Uses suffixes (agglutinative)	Uses inflectional endings
Verb conjugation	No gender agreement	Gender agreement in past tense
Definiteness	No definite/indefinite articles	Has word-based determiners

By emphasizing these differences, learners can better understand uzbek grammar without confusion.

Conclusion: Teaching uzbek to russian speakers requires a combination of methodologies tailored to their linguistic background. While the communicative and interactive approaches develop speaking and listening skills, the grammar-translation and audiolingual methods provide a solid grammatical foundation. Integrating technology further enhances learning efficiency. A well-balanced combination of these strategies ensures a comprehensive and effective learning experience.
