Abstract. This article provides information, recommendations and guidance on how to establish cooperation between preschool educational institution, school and parents.
Keywords: Values, aesthetic education, motherhood and childhood, family strengthening, child education.

INTRODUCTION

Raising a child is a difficult and complex task that requires not only the right attitude towards children, but also a high sense of responsibility for their destiny from all family members. Family education in all aspects, including spiritual, moral, intellectual, aesthetic, physical and work education, will have a good effect.

Spiritual education should be taught to a child by telling about national heroes who fought for the development of the Motherland, peace and prosperity of the country in the past, introducing the symbolic symbols of our country, independence, memorizing poems and songs about the Motherland, values and an can be inculcated by teaching our mothers.

MATERIALS AND METHODS

In the process of family education, a number of moral aspects of a person are formed, which no other object of education gives as high a result as in the family. They have such human qualities as humanity, kindness, compassion, sympathy, culture of behavior, duty and loyalty, and gratitude.

Parents should be extremely responsible for the physical well-being of their growing children. For example: it is necessary to perform morning physical exercises together with children, to give them proper and vitaminized food, to organize rest and sleep properly, and to undergo medical supervision on time. Labor education is important in a child's life. Educating children in the spirit of love for work, forming work ethics and skills in them can only be achieved if their interests are taken into account. When preparing a child for school, parents should pay serious attention to the formation of work skills and qualifications, to educate the need for work, to appreciate the work of others, to be careful about the results of work. Work is a means of educating children's organization, attention, coordination, as well as developing willpower such as persistence and perseverance in achieving a goal [1].

RESULTS AND DISCUSSION

It is an important task of employees of preschool educational organizations, pedagogical factors, researchers and designers who conduct scientific work in this field to find ways to further improve the family upbringing of children of preschool age, to further improve cooperation with parents, to strengthen the connection between family education and social education. Education of children is an important task of the state. Its correct solution depends on the complete interaction and unity of

actions of educational institutions, family and society, on a comprehensive approach to educational work.

In the process of educational activities, the educator uses new pedagogical technology materials and effective methods and methods of education, taking into account the child's age, mental and physiological characteristics, the effectiveness of education increases.

The educator must determine the capabilities of each child, children are divided into several groups depending on their attitude to the community in which they live:

Group 1: Children with a positive attitude, they make friends quickly. Team members respect them. Children of this category are active members of the team, and the educator relies on them to establish team relations.

Group 2: actively participates in the initiative, but becomes unstable.

Group 3: they are shy and do not participate in games, they are slow in educational activities. Such children need special attention.

The educator approaches the children of each group individually, helps them to interact with each other and make friends.

The main pedagogical task of PSE is to educate children in a high spiritual and moral spirit and to provide regular assistance to parents in preparing them for schooling [2].

Family education in all aspects, including ideological, moral, aesthetic, physical and work education, will have a good effect. For example: Ideological education can be inculcated in a child by telling about national heroes who fought for the development of the country, peace and well-being of the country, introducing the symbolic symbols of our country, memorizing poems and songs about independence and the country. Also, it is to form a feeling of readiness for the defense of the Motherland in our children.

Parents are interested in preparing preschool children for school. This is understandable, because academic work requires effort, effort, persistence, and the ability to achieve results. A child of preschool age is prepared for this new type of work not only in the process of educational activities, but also during the performance of any work assignments. The system of working with the family of PSEs should have a clear goal and content. It is possible to achieve positive results in the education of children due to skillfully combining the forms of working with parents in a team style and individually, and organizing pedagogical campaigns among the general population. We present the most common forms and methods of PSE employees' cooperation with parents and families [3].

Work one-on-one with parents and families. This includes visits to the family by the educator, conducting an interview for the parents, giving them advice, introducing the parents to the child's life in the PSE.

Activities organized with parents as a team. These are group and general meetings of parents, parents' school, conferences, Saturdays, question-and-answer evenings.

Instructional works:

- this type of work is organizing exhibitions, showing children's work, organizing open-door days, parents' corner, libraries for parents.
- visit the child's family and get to know the family members.
- parents can show pedagogical education and others.

The contents of the work carried out by the educators of the preschool educational organization with the family include [4]:

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,

> introduce the content of the work carried out in the preschool educational organization on child education, family strengthening, motherhood and childhood protection;
> explaining to parents that they are responsible for the education of their children before the state and society.

Parents of all groups of children in the preschool education organization, parents of parallel groups and parents of children of one group can be invited to the meeting of parents. At the general meeting, parents will be introduced to the tasks of comprehensive development and upbringing of children of preschool age, plans for this year, activities of the parents' committee, best practices in family education. At the meeting, the headmaster or a Methodist educator will give a speech, parents will speak, and children will speak. These allow identifying achievements and shortcomings in educational work, strengthen family and public relations, increase the responsibility of parents for their child's upbringing, and arouse interest in the organization of preschool education. At the meeting of parents in the group, the issues that are relevant for parents of children of this age are discussed. For example, if the topic of the general meeting is "The role of the family in providing moral education to children", then this topic will be complicated in the meeting held in the middle group. "Joint work of preschool education organization and family in raising diligence in children", "Education of respect for adults in children" and so on. A lecture prepared for parents can be combined with children's work, a film on a related topic, and viewing slides.

CONCLUSION

The comprehensiveness of the cooperation established between the children's preschool education organization and the school is the main condition for the successful implementation of the task of preparing children for school education. The connection between the children's preschool education organization and the school is, on the one hand, the transfer of children to school with the general development and upbringing of them to the extent that meets the requirements of school education, and on the other hand, the teacher's responsibility for children of senior preschool age Relying on acquired knowledge, skills and experience, it requires use in the educational process. The integral connection between the children's preschool education organization and the school helps bring closer the conditions of education for children of senior preschool age and elementary school students. The employees of the preschool education organization should be well aware of the requirements for children in the first grade, and prepare the children in the preparatory group for school accordingly. The organic connection between the school and the preschool educational organization has a complex and multifaceted structure. can be shown.
