Abstract:
This article examines the primary problems, subject matter, objectives, tasks, and research methods of the module on the theory and technologies of children's speech development, as well as the theory of preschool education pedagogy.

Keywords: Pedagogical technology, interactive methods, ability, style, ingenuity, creativity, non-traditional methods, creative thinking, critical approach, ethics, professional module, speech culture, thinking skills.

The presented educational manual based on the module "Theory and technologies for developing children's speech" was developed according to the state educational standard for general professional modules for undergraduate-level studies in higher education institutions of the Republic of Uzbekistan. It aims to equip future preschool educators with theoretical and practical knowledge through contemporary methodological approaches and skills in preschool educational techniques, in accordance with the requirements outlined in the Education Act of the Republic of Uzbekistan (September 23, 2020). Additionally, it seeks to ensure the rational organization of the educational process, effective use of pedagogical-didactic approaches, and demonstrate a high level of pedagogical culture and technical competence within real preschool educational practices.

President of the Republic of Uzbekistan Sh.M. Mirziyoyev has emphasized the creation of effective conditions and mechanisms for individual self-realization and comprehensive personal development, as well as changing outdated mentalities and social behavior patterns. According to him, the main purpose of educational reforms in the country is the preparation of highly competitive pedagogical specialists. His thoughts underline the importance of establishing a new system to prepare competent preschool education specialists, integrating Uzbekistan’s rich intellectual heritage and universal human values with modern advancements in culture, economy, science, and technology. Indeed, one of the critical conditions for the development of preschool education in Uzbekistan today is creating a system that trains skilled specialists. In building a spiritually renewed society, democratic and law-based state, and fostering globally integrated preschool education, the national agenda of preparing pedagogical personnel plays a crucial role.

In our republic, confidently pursuing independent development and aspiring to build a democratic, law-based society, a conducive environment is being created for every individual to live freely and prosperously, with ample opportunities provided for youth education. The implementation of the National Personnel Training Program highlights the significance of the native language at all educational levels, clearly showing that effective, expressive, structured, and creative thinking in one’s mother tongue is essential for mastering various academic disciplines. The main objective of preschool education is preparing children for school. Preschool education requires that children gain not just specific knowledge, but also develop thinking skills, comprehend the speech of peers and adults, engage freely in dialogue, and cooperate effectively. Children must possess imaginative and logical thinking in their native language, express their thoughts correctly through speech, demonstrate self-control, and engage in cognitive activities such as observation, listening, memorizing,

generalizing, and comparing. The role and significance of the discipline aimed at developing speech skills in the native language are indispensable for achieving these objectives. Since language serves as a primary means of communication among people, it equally serves everyone, thus being a social phenomenon reflecting societal developments and changes.

Speech is composed of linguistic units, meaning each individual conveys their ideas through language units and comprehends others' ideas similarly. Speech involves communicating thoughts and reflections about surrounding events and situations. Consequently, language and speech hold crucial importance in human life. Teaching the subject "Theory and Technologies of Children's Speech Development" in preschool education allows educators to effectively employ speech development methods, correctly address speech development tasks tailored to each age group, and accomplish the goal of preparing children for school education.

Based on the above considerations, it can be concluded that the Uzbek language, with its ancient origins, has continuously evolved and served society throughout all stages of its development.

The discipline "Theory and Technologies of Children's Speech Development" facilitates oral speech development in preschool children, cultivating their communication skills with peers and adults, fostering appropriate language use in speech, and shaping moral-ethical qualities and speech etiquette. As a pedagogical discipline, it plays a developmental role by enhancing speech clarity and fluency through anatomical-gymnastic exercises of speech organs, promoting cognitive activities, developing thinking skills, and fostering speech etiquette and moral maturity. Because well-developed speech is understandable and impactful, children continually improve their own speech. As a pedagogical science, the discipline explores the pedagogical laws and requirements for speech development, identifies effective factors, tools, methods, and approaches based on modern pedagogical achievements, and recommends their application in education. This discipline seeks answers to fundamental pedagogical questions: "What needs to be taught?"—which involves determining essential speech skills and competencies for preschool children. This task is carried out based on educational standards recognized as the core content of education in Uzbekistan, ensuring sustainable educational outcomes.

Educational workloads are standardized, and teachers organize the learning process by considering children's developmental levels, personality traits, and speech activity. It also answers the pedagogical question: "How to teach?"—highlighting the effective methods and techniques for speech development in preschool children, evaluating their implementation and effectiveness, and emphasizing the incorporation of contemporary technologies in improving methods and techniques. The primary objective of children's speech development methodology is to equip teachers, educators, and parents with scientifically substantiated and highly effective knowledge about speech development methods, effective usage of optimal techniques, and skills to improve the effectiveness of speech development lessons.
