From Tasks to Talk: Exploring Conversational Engagement in TBLT Classrooms

Ugiloy Xakimova Orifjonovna
Yangi Asr University Teacher of the Department of Languages

Abstract: This paper investigates how Task-Based Language Teaching (TBLT) can foster conversational engagement through dialogic interaction in the language classroom. By examining the principles of TBLT in conjunction with theories of dialogic pedagogy, the study highlights how purposeful tasks support learner-centered, meaningful interaction. The paper concludes that dialogic engagement within TBLT not only enhances linguistic competence but also supports learners' communicative confidence and collaborative skills.

Key words: Task-Based Language Teaching (TBLT), dialogic interaction, conversational engagement, communicative competence, language pedagogy, learner interaction, classroom discourse

Introduction

Communicative competence remains a central goal of language instruction in the 21st century, particularly in contexts emphasizing learner interaction. Task-Based Language Teaching (TBLT), a communicative approach that structures learning around real-world tasks, has gained prominence for its effectiveness in promoting authentic language use (Ellis, 2003). Parallel to this, dialogic teaching emphasizing open-ended dialogue and collaborative meaning-making has been recognized for deepening learner engagement (Alexander, 2008). In the classes where TBLT approach emphasized, dialogic interaction plays an essential role for advancing intellectual development and educational achievements of students. This article explores the intersection of these two approaches, focusing on how TBLT fosters conversational engagement through dialogic interaction in classroom settings.

1. Theoretical Framework

1.1 Task-Based Language Teaching (TBLT)

TBLT frames language learning around communicative tasks that mirror real-life use. According to Willis and Willis (2007), tasks should be goal-oriented, involve a communicative gap, and allow for learner autonomy in meaning negotiation. TBLT aligns with sociocultural theory, which views language as both a cognitive tool and a medium for social interaction (Vygotsky, 1978). Within TBLT, interaction is not incidental but central to the learning process.

1.2 Dialogic Interaction and Engagement

Dialogic interaction involves reciprocal communication where learners co-construct meaning through questioning, reasoning, and elaboration (Mercer, 2000). Engagement in this context includes not only behavioral participation but also emotional and cognitive investment (Fredricks, Blumenfeld, & Paris, 2004). When learners are dialogically engaged, they are not merely responding but actively shaping discourse, thereby deepening their understanding and linguistic ability. In TBLT, learners often engage with general tasks that are not designed to target specific language forms. Instead, they are free to draw on whatever linguistic resources they possess to convey meaning and complete the task objectives.

2. The Role of Conversational Engagement in TBLT

Tasks provide opportunities for learners to use language in context-rich, meaningful situations. However, the effectiveness of tasks largely depends on the level of interaction they provoke. Dialogic

engagement in TBLT manifests when learners collaboratively plan, execute, and reflect on tasks—often negotiating meaning, correcting errors, and scaffolding each other's language production (Long, 2015). For instance, information-gap tasks and problem-solving activities naturally generate dialogue as learners work together to complete objectives. This encourages the use of authentic language functions such as requesting clarification, hypothesizing, and agreeing or disagreeing (Pica, 2008). In such environments, learners move beyond rote response patterns toward more nuanced, extended discourse.

3. Classroom Implications

Instructors seeking to promote conversational engagement through TBLT should consider the following strategies: Designing open-ended tasks that require learners to exchange opinions or co-create solutions. Encouraging peer scaffolding, where learners support each other's language use through prompts and rephrasing. Providing metacognitive support, such as reflective prompts or task reviews, to deepen engagement. Creating a safe dialogic space, where errors are seen as learning opportunities rather than failures. These strategies can be enhanced through multimodal materials, digital tools (e.g., collaborative writing platforms), and flipped classroom models that allow more time for live interaction. When integrated into TBLT, dialogic approaches to questioning can significantly enhance learner engagement and motivation by making tasks more meaningful and personally relevant. For EFL learners, such questioning not only promotes active participation but also supports key aspects of language development, including vocabulary growth, fluency, and the ability to express ideas clearly. By embedding open-ended and cognitively demanding questions within tasks, teachers encourage learners to analyze and evaluate information, which fosters critical thinking. Furthermore, the problem-solving nature of many TBLT activities aligns well with dialogic questioning, as both require learners to apply their knowledge flexibly across contexts, deepening their linguistic and cognitive skills through collaborative exploration. Meaningful communication with more proficient peers provides learners with access to more accurate language input. Through negotiation of meaning during task-based interaction, learners are prompted to adjust and refine their language in response to misunderstandings, which facilitates interlanguage development. This process is further reinforced by peer scaffolding, where learners collaboratively support each other's performance, enabling them to accomplish linguistic tasks beyond their individual capabilities. In this way, TBLT creates ideal conditions for interaction-driven learning, where language development is co-constructed through task engagement and social collaboration.

Conclusion

Task-Based Language Teaching, when implemented with an emphasis on dialogic interaction, transforms classroom discourse into a dynamic site of meaning-making. Conversational engagement in TBLT not only strengthens linguistic fluency but also fosters collaborative learning and learner agency. As classrooms become increasingly diverse and communicatively demanding, aligning task design with principles of dialogic pedagogy offers a promising path forward.
