## Theoretical part

Today, creating custom clothing that meets the requirements is a somewhat complex task.Aramid fiber is a highly durable and strong synthetic fiber known for its high mechanical properties. The name "aramid" comes from the word "aromatic polyamide", which is based on a strong chemical structure and molecular bonds.Because special clothing is manufactured to its own standards, that is, it is sewn. Therefore, when sewing these clothes, we cannot use any silhouette or style. Because special clothing is used to perform a specific task, that is, to protect the human body from external factors. As a result, the demand for comfortable clothing during work increases. We use the necessary tools and equipment to increase work productivity. At the same time, we also use special clothing. As a result, the demand for developing protective clothing that takes into account human health conditions increases. Taking into account the above circumstances, I received questionnaires from the workers who sew special clothing in order to identify the shortcomings of special clothing and work on it in order to further improve the quality and comfort of the clothing. The questions in the questionnaire are as follows.

1. How much can a special clothing fabric protect you from fire?
   a) 25% b) 50% c) 75% d) 100%
2. Determine how well the fabric allows air to circulate around your body.
   a) 25 B) 50% c) 75% d) 100%
3. Do you experience allergic reactions on your body parts when wearing your clothes?
   a) itching b) rash c) other allergic reactions d) no allergic reactions occur.
4. Identify the flaws in your clothing

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-5

a) hard b) rough c) good d) excellent

5. If you could change your outfit, what would you change?
   a) Appearance b) Weight c) Material d) Price (cheap) and (expensive).
6. Determine the level of damage caused by your clothing during the work process?
   a) 25% b) 50% c) 75% d) 100%
7. Determine how much your clothes cost.
   a) 500-1000 b) 1000-1500 c) 1500-2000 d) 2000-2500
8. Determine the service life of your clothes
   a) 6-12 months b) 12-18 months c) 18-24 months d) 24-30 months
9. Determine the amount of melting your clothes in the fire during work
   a) 25% b) 50% c) 75% d) 100%
10. Determine the level of water and oil resistance of your clothing
    a) 25% b) 50% c) 75% d) 100%
11. Determine the erosion resistance period of your clothing
    a) 6-12 months b) 12-18 months c) 18-24 months d) 24-30 months
12. Determine the level of friction of your clothes
    a) 25% b) 50% c) 75% d) 100%
13. Determine the degree to which your clothing will cause you damage if subjected to external force.
    a) 20% b) 30% c) 40% d) more than 50%
14. Determine the state of elasticity of clothing
    a) 25% b) 50% c) 75% d) 100%
15. Would you like your clothes to have a completely different elastic (in appearance)?
    a) 25% b) 50% c) 75% d) 100%

The following are sample charts based on the results of the questions above. This chart is for the question, "To what extent can the following special clothing fabric protect you from fire?" The percentages shown in this chart are based on the results obtained from 100 people.

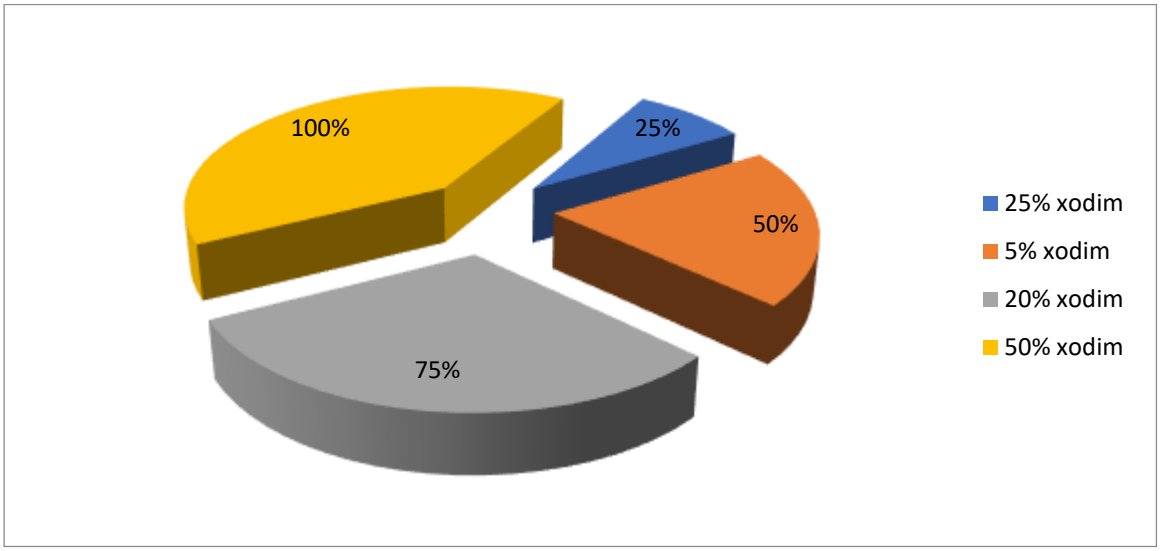

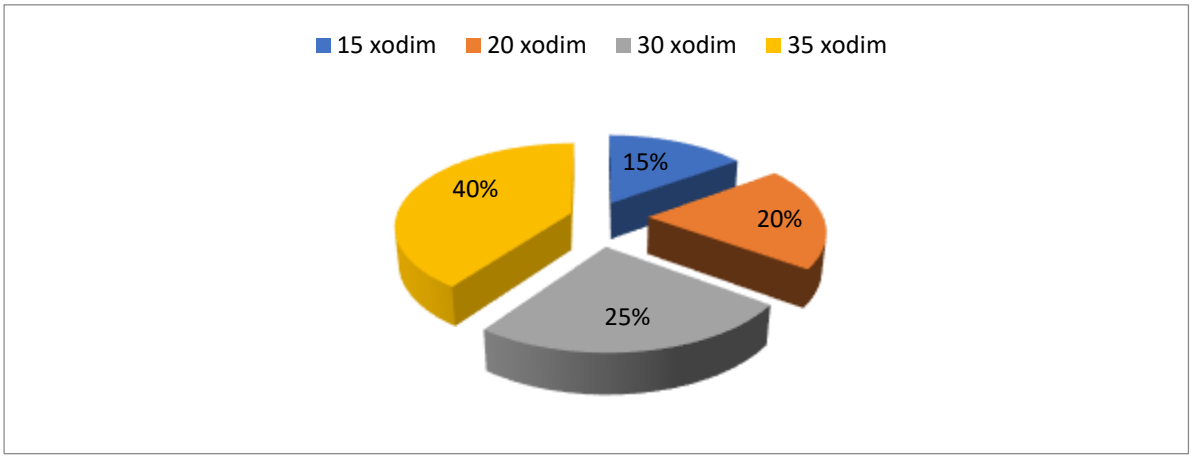

Diagram 1

Regarding the question in this diagram 1, 25 employees answered that the special clothing fabric can protect me from fire by 25%, 5 employees answered that the special clothing fabric can protect me from fire by 50%, 20 employees answered that the special clothing fabric can protect me from fire by 75%, and 50 employees answered that the special clothing fabric can protect me from fire by 100%.

Determine how well the fabric allows air to circulate around your body.

2-diagram

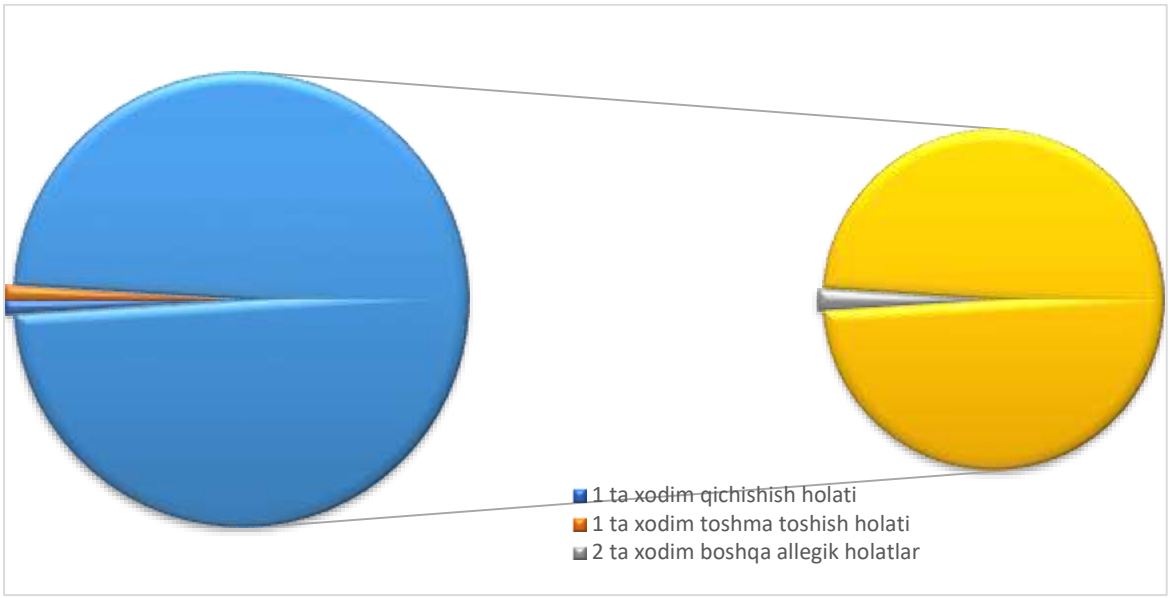

This 2nd diagram was created based on the question, "How much air does the clothing fabric allow you to breathe?". According to the results of these questions, 15 employees expressed the air permeability of their body parts as 15%, 20 employees as 20%, 30 employees as 25%, and 35 employees as 40%. And the analysis of this question is presented in the 2nd diagram above.

This 3rd diagram was based on the question, "Do you experience any allergic reactions to your body parts when wearing your clothes?" And the following results were obtained; 1 employee experienced itching, 1% 1 employee experienced rash, 2% 2 employees experienced other allergies 97% 97 people completed the questionnaire stating that they did not have any allergic reactions.

3-diagram

Identify flaws in your clothing

a) heavy b) rough c) good d) excellent

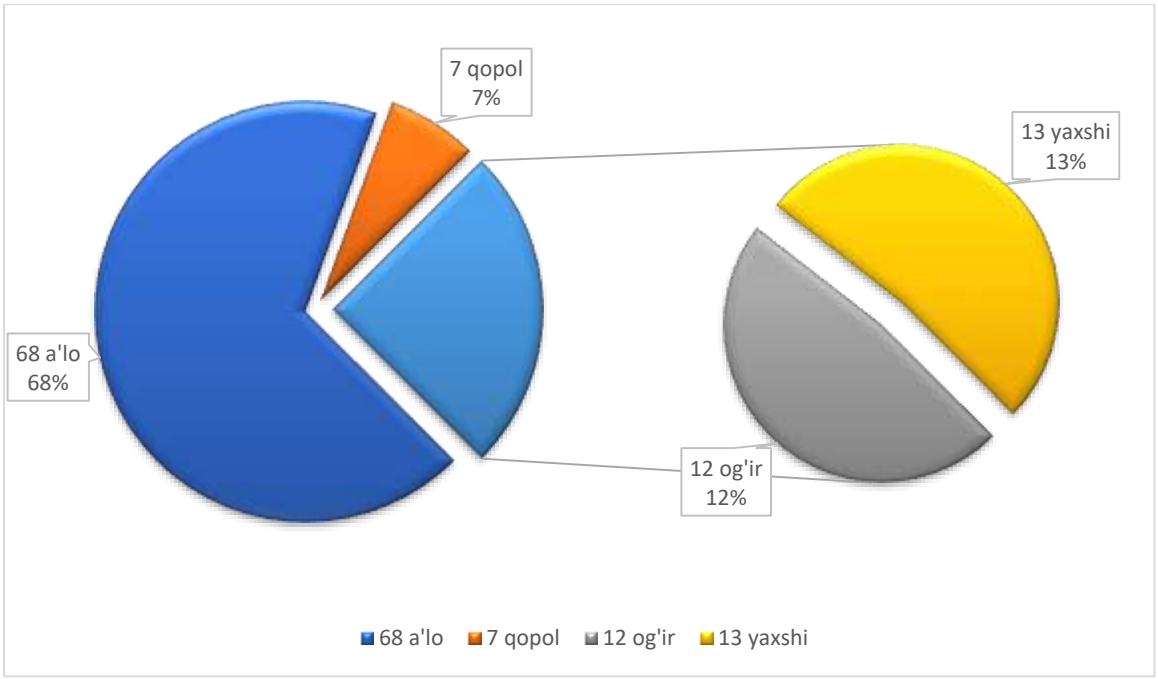

Diagram 4

In this 4th diagram, Identify the flaws in your clothes. It was compiled based on the questionnaire. And the following results were achieved; 68% percent 68 employees answered excellent, 7% percent 7 employees answered rough, 12% percent 12 employees answered difficult

ISSN: 2582-4686 SJIF 2021-3.261, 2022-2.889, 2023-5.384, 2024-6.875 ResearchBib IF: 9.948 / 2024

VOLUME-5, ISSUE-5

and 13% percent 13 employees answered good, and the results in the above diagram analysis were achieved.

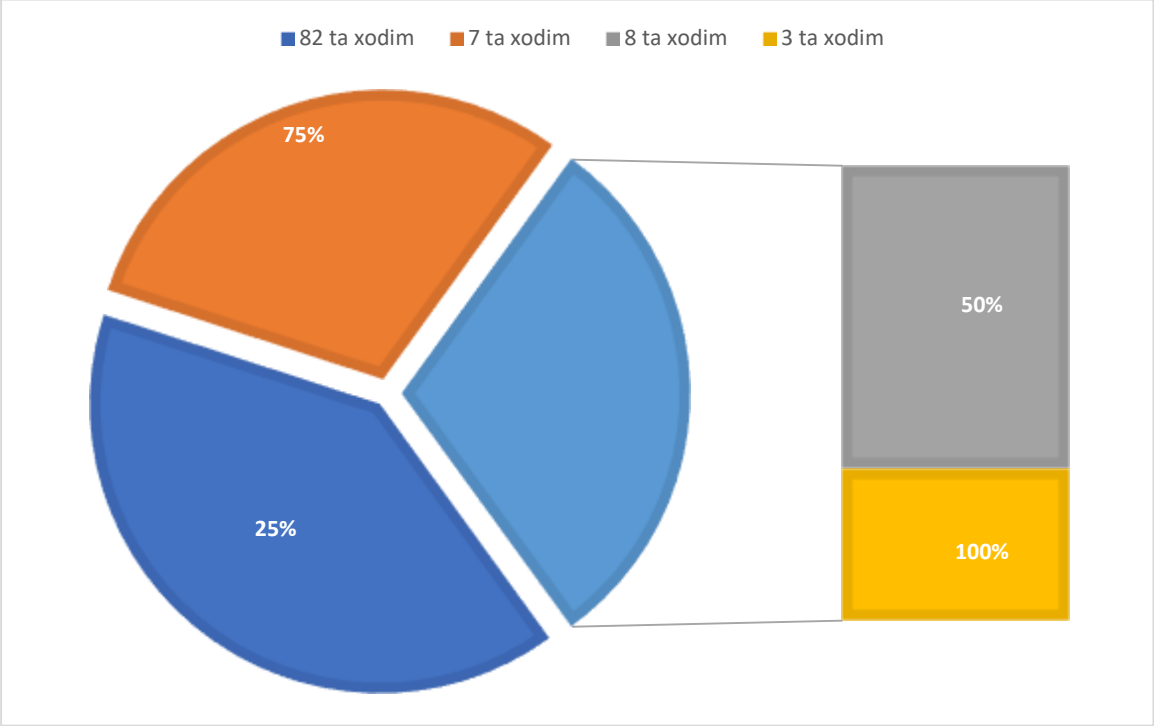

Diagram 5

In this diagram 5, determine the level of injury caused by your clothing during the work process? The results of this analysis were analyzed by answering questions based on a questionnaire. According to this result, 3% percent 3 employees 100%, 7% percent 7 employees 75% percent, 8% percent 8 employees 50% percent, 13% percent 82% percent 82 employees 25% percent injury caused answers.

Like the results of the above diagrams, the results of the remaining questions were also completed with the necessary results through the analysis of the diagrams. That is, through the survey conducted, the necessary shortcomings were identified as a result of the analysis of the conveniences and minor shortcomings in the clothes, such as constructive, physical-mechanical, material and technological, or similar. And in the new clothes that can be created, taking into account the minor shortcomings and conveniences as above, it is possible to create new and more effective and better aesthetic clothes.

## Conclusion

The main task of this article is to discuss the use of a questionnaire and its analysis in order to help create a convenient and effective model for creating a new model. This questionnaire is designed for firefighter clothing, and the questionnaires in it are also specially designed for firefighter clothing. At the same time, the results of the questionnaire were analyzed using diagrams, the necessary conclusions were reached, and new ideas were obtained for developing a new model.
