Annotation. This article covers information on the material and technical base of music schools in Fergana, Andijan, and Namangan regions during the years of independence. This study reflects the state of provision of music and art schools with buildings in the early 90s of the 20th century, the problems in this process, and the purpose of the study is to analyze the material condition of the valley music and art schools and show the development processes of these educational institutions. The information provided in the article is covered on the basis of historicity, objectivity, consistency, and comparative logic. It also serves to study and introduce into use the information on the subject, oral history information, and current archives of music schools, regional archival funds, and press pages. The information in this article can be used by researchers conducting research in the areas of musical culture and the history of musical education in the future.

Key words: music and art schools, material and technical base, major repairs, reconstruction, construction, Resolution No. 910, program, building.

INTRODUCTION

Today, raising the younger generation to be intellectually mature, spiritually enriched, and physically healthy is considered a key task in all human societies. The most effective and optimal way to fulfill this task is through the education system. In this regard, developing music and art education—which directly influences human psychology and contributes to spiritual and intellectual growth—is a vital factor, along with ensuring the necessary conditions for its advancement. As President Shavkat Mirziyoyev emphasized:

"In today's world, it would not be an exaggeration to say that the role and significance of musical art in uniting all people with noble intentions and educating youth in the spirit of high humanistic ideals is beyond measure" [1].

LITERATURE REVIEW AND DISCUSSION

During the years of independence, numerous scholarly works have been created in Uzbekistan reflecting various directions of musical culture. In particular, the dissertations of A. Mavrlov, X. Khamidov, Y. Ergasheva, F. Ernazarov, Y.A. Smesova, Z.R. Ishanxodjaeva, and N. Mustafaeva have played a crucial role in studying the history of musical culture in Uzbekistan, holding both scientific and practical value. These works explore the emergence and development of music culture in the country. However, the specific activities of music schools that foster and lay the foundation for the achievements of musicians and artists have been rarely studied. While some information about the development of music education and the participation of music schools in international and national competitions is provided in the research of B. Irzayev and S. Murtozova, there has been no dedicated study on this topic in the context of the Fergana Valley during the years of independence.

VOLUME-5, ISSUE-6

In the early years of independence, the state of education in general—and music education in particular—did not meet the required standards. Therefore, major reforms initiated by the state and government focused on the radical improvement of the education system, ensuring the quality of education, enhancing content, and providing necessary infrastructure in educational institutions. The adoption of laws, decrees, and orders aimed at developing music education and culture created a legal framework for these reforms.

Examples include:

- The Presidential Decree No. PQ-910 (July 8, 2008) on strengthening the material and technical base of children's music and art schools and improving their functioning within the 2009–2014 State Program [2];
- Decree No. PQ-2435 (November 20, 2015) on the 2016–2020 State Program for improving the activities of children's music and art schools [3];
- Decree No. PF-4947 (February 7, 2017) on the Action Strategy for the Further Development of the Republic of Uzbekistan [4].

As a result of these reforms, 81 children's music and art schools are now operating in the Fergana Valley: 30 in Fergana, 29 in Andijan, and 22 in Namangan. These schools offer education in 14 directions. Initially, most music schools lacked their own buildings and operated in temporary facilities for years. This problem was not solved even in the early independence years. For instance, in the 1992–1993 academic year, only 8 of 18 music and art schools in Namangan had their own premises, and 5 of them needed major repairs. Similar situations were recorded in Andijan and Fergana.

The difficult conditions of the transitional period negatively affected these schools. Between 1994 and 1995, the number of schools with their own buildings in Namangan dropped from 8 to 6. Andijan had 28 schools, 10 of which required major repairs, and 1 was in an emergency state. Fergana also saw a decline.

By 1995, Fergana had 30 schools, 6 in rural areas, but 12 required significant renovation. These issues stemmed from the economic crisis following the Soviet collapse and the "residual principle" of education financing. Priority was given to critical sectors, leaving cultural development underfunded. Due to high population density in the Fergana Valley (e.g., 427.4 people per km² in Andijan), the number of music schools was insufficient to meet public demand. The material and technical condition of the schools remained poor into the 2000s. The transformation of the Ministry of Culture into the Ministry of Culture and Sports further reduced attention to music schools. A 2005 financial report does not even mention them.

In response to this neglect, Presidential Decree No. PQ-910 triggered the reconstruction of existing schools and the construction of new ones. By 2014, 278 schools had undergone construction or renovation: 136 built anew, 142 overhauled, with 137 billion soums invested in equipment and furnishings. Student enrollment increased by 1.5 times: from 38,034 in 2008 to nearly 55,000 in 2015. Over 9,622 teachers worked in these schools [14].

In Fergana, construction and reconstruction efforts were actively carried out between 2009 and 2014, overseen by the Fergana branch of the Children's Sports Development Fund. During 2010–2013, 36.2 billion soums were invested in infrastructure, leading to the reconstruction or construction of 21 schools. Student numbers grew from 3,044 in 2009 to 5,244 in 2014, and the number of teaching staff rose from 419 to 921 [13].

VOLUME-5, ISSUE-6

In Namangan, similar progress occurred. For example, School No. 3 in Kosonsoy, established in 1962, received a new 150-seat building in 2016. In Norin district, School No. 6 underwent reconstruction in 2012, including the addition of a new building.

Andijan's School No. 1 was rebuilt in 2013 with an investment of 1.592 billion soums. In 2012, a new school building was opened in Khanabad, and in Asaka, School No. 22 was reconstructed in 2012, receiving 1.253 billion soums. Director Yorqinbek Dolimov noted that the school now has 35 classrooms, 77 staff, and 330 students across 13 disciplines. However, there remains a shortage of qualified specialists [15].

CONCLUSION

In conclusion, the state programs implemented in the Fergana Valley have significantly expanded the capabilities of music and art schools. Strengthening their material and technical base has notably improved the quality and effectiveness of education. The provision of textbooks, educational materials, and instruments positively influenced teaching processes. However, management changes caused temporary disruptions. In recent years, systematic efforts have been made to resolve these issues and ensure sustainable development.
