Abstract

This study delves into the portrayal of Uzbek national dish names within various art forms and examines the challenges associated with their translation into other languages. Recognizing that culinary terms often carry deep cultural significance, the research emphasizes the importance of preserving these nuances during translation. Utilizing qualitative methodologies, including textual and semiotic analysis, the study explores Uzbek literature, cinema, and visual arts to identify the role of dish names in conveying cultural narratives. The research further categorizes translation strategies—such as transliteration, descriptive translation, cultural substitution, and annotation—and evaluates their effectiveness in maintaining cultural integrity. Findings suggest that a combination of transliteration with brief explanatory notes often yields the most culturally respectful translations. This paper aims to contribute to the broader discourse on cultural translation practices and offers recommendations for translators handling culturally rich terminology.

Keywords: Uzbek cuisine, cultural translation, national dish names, artistic representation, translation strategies, food culture.

Introduction

Food serves as a profound symbol of cultural identity, encapsulating traditions, values, and communal practices. In Uzbekistan, dishes like plov, lagman, manti, and shashlik are not merely culinary delights but are emblematic of the nation's rich heritage. These dishes frequently appear in Uzbek literature, films, and visual arts, symbolizing themes such as hospitality, familial bonds, and societal structures. However, translating these culturally laden terms into other languages presents unique challenges, often risking the loss of their intrinsic meanings. This study investigates the representation of Uzbek national dish names in artistic works and explores effective translation strategies to preserve their cultural essence.

Food is not merely a means of sustenance; it is a cultural artifact that encapsulates a community's traditions, values, and collective memory. In Uzbekistan, national dishes such as plov, lagman, manti, and shashlik are more than gastronomic entities—they are embedded within the cultural and emotional fabric of society. These dishes often surface in Uzbek literature, cinema, and visual art, functioning as symbols of hospitality, family unity, and social structure. They serve as narrative devices that carry implicit cultural meanings far beyond their culinary roles.

Translating the names of these dishes into other languages, however, presents significant challenges. The intricate cultural contexts and symbolic meanings attached to such terms often resist direct equivalence in other languages. Literal translations risk stripping away cultural depth, while excessive explanations may disrupt narrative flow. This study aims to investigate the artistic representation of Uzbek national dish names and to analyze effective translation strategies that retain their cultural

essence while ensuring reader comprehension. In a globalized world where intercultural communication is increasingly essential, understanding how to faithfully render culturally significant food terminology is both timely and necessary.

1. Literature Review

The translation of culture-specific terms has been a focal point in translation studies. Susan Bassnett (2002) posits that translation extends beyond linguistic conversion, encompassing cultural negotiation. Lawrence Venuti (1995) introduces the concepts of domestication and foreignization, highlighting the translator's role in either adapting the source text to the target culture or preserving its foreign elements. Roland Barthes (1961) emphasizes that food functions as a system of communication, rich with cultural codes. In the context of Uzbek literature, Karimov (2010) analyzes the symbolic use of food, noting its role in establishing settings and character dynamics. Turaeva (2015) examines how Uzbek hospitality and food rituals reflect broader cultural themes. Despite these insights, there remains a gap in research focusing specifically on the translation of Uzbek culinary terms in artistic contexts.

2.Methodology

This research utilizes a qualitative methodological framework, employing three primary modes of analysis: textual analysis, semiotic interpretation, and comparative translation review. Primary sources include canonical and contemporary Uzbek literary texts, films, and visual art that feature national dishes prominently. Examples such as Qodiriy's O‘tgan kunlar and films like ‘’Mahallada duv-duv gap’’ are studied to explore how food terminology functions within the cultural and narrative structures of these works.

Comparative translation analysis was conducted by examining Uzbek source texts alongside their English and Russian translations. The focus was placed on how dish names were rendered and whether cultural meanings were preserved or diluted. Reader-response theory was also incorporated, using surveys and interviews with bilingual participants (Uzbek-English and Uzbek-Russian speakers) to assess how different translation strategies influenced reader interpretation and emotional resonance. Participants evaluated the clarity, authenticity, and cultural faithfulness of transliteration, descriptive translation, annotation, and substitution methods.

This triangulated approach allows for a comprehensive understanding of both artistic representation and translational impact, offering a multifaceted view of the subject matter

3. Representation of Dish Names in Artistic Works

In Uzbek art forms, dish names often transcend their denotative meanings and function symbolically. In literature, meals featuring plov or manti are used to illustrate themes of community, tradition, and social cohesion. For example, in Qodiriy's O‘tgan kunlar, the preparation and sharing of plov during key events reflect national identity, generational continuity, and familial unity. In cinema, food serves as a narrative anchor; for instance, Mahallada duv-duv gap uses shared meals to depict evolving gender roles, intergenerational conflicts, and neighborhood solidarity.

Visual arts, too, incorporate imagery of national dishes to evoke nostalgia and ground the viewer in specific cultural contexts. Traditional dishes serve not only as objects of aesthetic representation but as cultural markers that convey time, place, and emotion.

4. Challenges in Translating Dish Names

Translating Uzbek national dish names poses several challenges:

1. Lack of Direct Equivalents: Many Uzbek dishes have no direct counterparts in other cuisines, making literal translation inadequate.

VOLUME-5, ISSUE-6

2. Cultural Nuance Loss: Direct translations may strip the term of its cultural significance and emotional resonance.

3. Reader Misinterpretation: Transliteration without context can confuse readers unfamiliar with Uzbek cuisine.

4. Over-Explanation: Descriptive translations might disrupt the narrative flow and overwhelm the reader with information.

5. Translation Strategies

The study identifies four primary strategies for translating Uzbek dish names:

Transliteration: Retaining the original term (e.g., plov, manti), preserving authenticity but potentially requiring additional context.

Descriptive Translation: Providing a description of the dish (e.g., manti as "steamed meat dumplings"), which aids understanding but may dilute cultural specificity.

Cultural Substitution: Replacing the dish with a culturally similar one from the target language, which can be misleading and is generally discouraged.

Annotation: Using footnotes or glossaries to offer cultural context, effective in academic or literary settings but less so in casual reading materials.

Combining transliteration with brief explanatory notes often strikes a balance between authenticity and reader comprehension.

Findings

The research findings confirm that no single strategy suffices in all contexts. Rather, a context-sensitive hybrid approach yields the best results. Among survey respondents, the combination of transliteration with brief explanations was most appreciated. Participants stated that this method preserved the authenticity of the original while enhancing comprehension. For instance, rendering manti as “manti (steamed meat dumplings)” was seen as both informative and culturally respectful.

Descriptive translations were effective in increasing reader understanding but were criticized for flattening cultural richness. Conversely, pure transliteration without context was often confusing, especially for readers lacking background knowledge of Uzbek cuisine. Cultural substitution, though intended to simplify the reader’s experience, was largely rejected by participants due to its tendency to misrepresent cultural specifics.

These findings underscore the need for translators to be both culturally informed and audience-aware, tailoring their strategies to the target readership while honoring the source culture’s integrity.

Conclusion

This study highlights the intricate relationship between language, culture, and cuisine, demonstrating that national dish names in Uzbek artistic works are not incidental but culturally charged signifiers. Their presence in literature, film, and visual arts reflects deeper themes of identity, tradition, and social structure. As such, translating these terms requires more than linguistic competence—it demands cultural empathy and contextual sensitivity.

The research establishes that hybrid translation strategies, which combine transliteration with concise explanation, most effectively preserve both semantic accuracy and cultural resonance. Translators working in culturally rich domains must engage in thoughtful mediation, ensuring that readers not only understand the content but also appreciate the cultural layers embedded within it.

As global audiences show increasing interest in Central Asian literature and art, the translator’s role becomes ever more pivotal. By adopting strategies that maintain authenticity while enhancing accessibility, translators can serve as cultural ambassadors, facilitating genuine cross-cultural
