MODERN APPROACHES TO TEACHING LITERARY WORKS TO PRIMARY SCHOOL STUDENTS

Shohsanamkhon Khadjayeva
Independent Researcher, Fergana State University

Abstract

This article analyzes the issue of teaching literary works to primary school students using modern methodological approaches. It highlights the positive impact of visual aids, creolized texts, and creative teaching methods on the development of students' thinking, emotional responses, and analytical abilities. The article also examines strategies for incorporating students' life experiences into the educational process and fostering an aesthetic perception of literary texts.

Keywords: primary education, literary text, modern pedagogy, visual aids, creolized text, student-centered teaching.

Introduction

In the process of primary education, literary works play a pivotal role in developing students' moral, aesthetic, and intellectual capacities. This stage is considered one of the most important periods for shaping a child's way of thinking and character. Although traditional approaches have long dominated the teaching of literature in primary schools, recent pedagogical studies have revealed numerous shortcomings in these methods. In particular, teaching that is limited to reading texts and answering prepared questions tends to make students passive recipients of knowledge, restricting their ability to think independently, analyze critically, and approach texts creatively.

In recent years, the introduction of innovative, interactive, and student-centered methods in the educational process has brought significant changes to the teaching of literary works. Modern methodology aims not only to foster comprehension and analysis of texts, but also to ensure that students perceive literary material deeply—visually, verbally, and emotionally—while integrating their personal experiences and background knowledge. Notably, linguistic and pedagogical research has demonstrated that creolized texts—multimodal constructions combining images and verbal elements—facilitate easier and more precise understanding for primary school students. Such materials stimulate students' visual memory, aesthetic sensibility, and emotional engagement.

Through creolized texts, students are able to grasp complex literary plots, character traits, and cause-and-effect relationships more thoroughly. Moreover, a learning process designed according to modern pedagogical principles nurtures in children a positive attitude towards reading, analysis, independent thinking, creative activity, and the culture of reading. Therefore, improving the methodology of teaching literary works in today's primary education and increasing its effectiveness requires the integration of both traditional and modern techniques, with broad use of multimodal tools that enhance students' active participation and both visual and verbal perception.

Methods

In this research, a variety of methods were employed to identify modern techniques for teaching literary works to primary school students and to evaluate their effectiveness. Initially, an in-depth study was conducted on the current primary education curricula in the country, with a particular focus on the structure of literary texts in textbooks such as *Alifbe*, *O'qish* and other relevant educational

materials, as well as the methodological approaches used in teaching these texts. At this stage, special attention was given to the creolized texts found in textbooks—that is, examples where text and visual elements are combined. Their impact on students' thinking and perception was examined based on practical observations.

A pedagogical experiment was carried out during the learning process, in which lessons and activities aimed at developing students' expressive and fluent reading skills were organized. During these activities, the teacher not only revealed the content of each text but also enriched it with visual materials such as illustrations, tables, and diagrams. Particular emphasis was placed on encouraging students to perceive the material visually and form emotional connections. Furthermore, on the basis of creolized texts, students were tasked with composing illustrated stories and engaged in discussions and debates to develop independent reasoning and critical thinking skills.

An essential stage of the lessons included activities such as selective reading and dramatization, consolidating knowledge through question-and-answer exercises, reconstructing narrative plots based on the text, and allowing students to retell the text in their own words. Through these practices, students' independent engagement with the text, emotional and creative perception, as well as their communication skills, were fostered. The research results demonstrated the practical effectiveness of each method, indicating that they contributed to increased student interest in lessons, a higher level of conscious comprehension of literary texts, and enhanced independent thinking abilities.

Throughout the study, the collected data were synthesized using both statistical and qualitative analysis methods. The professional experience of primary school teachers, the individual development pace of students, and the factors influencing their academic achievement were analyzed on a scientific basis.

Results and Discussion

Theoretical and practical analyses conducted during the research, as well as observations in primary school classrooms, reveal that the use of modern methods in teaching literary works significantly fosters not only students' comprehension, but also their thinking and creative potential. Notably, employing creolized texts—based on the integration of images and written material—has led to a marked improvement in students' ability to comprehend literary texts, quickly grasp central ideas and details, and achieve conscious understanding. Compared to traditional texts, materials that combine both visual and verbal elements (polycoded materials) encourage greater student participation, stimulating a natural curiosity, the need for reflection, and imaginative engagement with the text.

One of the major advantages of creolized texts is that they enable characters and events in a literary work to appear more vivid, memorable, and expressive than in ordinary texts. For instance, the various icons and symbols illustrated alongside letters in the *Alifbe* textbook provide students with multi-dimensional, accessible, and effective information about the form, sound, and meaning of each letter simultaneously. In the initial stages, this approach activates students' visual perception, memory, and associative thinking, helping to anchor each letter, word, or image more deeply in their minds.

Practical activities and observations further show that adding visual and illustrative elements to stories about literary characters intensifies students' emotional responses to those characters, providing opportunities to compare them to real-life situations, conduct analysis, and express personal feelings through the text. This process develops students' imaginative thinking, creative approach, visual and emotional perception, as well as their ability to form independent judgments. Constructing stories based on images, solving rebuses, and engaging in various creative tasks foster broader and more

comprehensive understanding of the text, facilitate analysis of plot development, and strengthen the ability to place themselves in the role of literary characters.

During the research, the use of methods such as question-and-answer, formulating independent questions based on the text, and conducting open discussions in groups or pairs, contributed to the development of students' critical and analytical thinking. Students began to articulate their views on the texts they read, participate in discussions, evaluate certain situations in the text, and propose different solutions—thus becoming active learners. Selective reading, dramatization, determining cause-and-effect relationships, dividing the plot into parts, and analyzing each segment independently further expanded students' thinking and enabled a deeper understanding of the content of literary works.

It should also be emphasized that, in lessons organized according to modern approaches, there was a significant increase in students' interest in reading, self-expression, creative engagement, and oral language proficiency. According to the results of the analysis, working with polycoded, creolized texts effectively develops students' emotional and aesthetic engagement with the text, their critical and analytical thinking, and their communication skills.

In general, the research findings confirm that a modern pedagogical approach—particularly the use of creolized texts in teaching literary works—elevates primary school students' individual, creative, and analytical abilities to a new level. This approach makes the process of reading literature not only more effective, but also more engaging and meaningful for students.

Conclusion

The results of the research and analysis indicate that teaching literary works to primary school students using modern approaches must, first and foremost, be organized with consideration of each student's individual abilities, psychological characteristics, and life experiences. At the core of this approach lies the concept of shaping the student as an active subject and cultivating them as the principal participant in the educational process. For this reason, the use of creolized texts—integrating images and verbal content during lessons—deepens students' emotional and aesthetic engagement with the text, broadens their perception and thinking, and creates extensive opportunities not only for reading but also for conscious analysis, independent conclusions, and connecting literary works to real-life events.

Within the modern approach, the integration of visual and verbal tools in lessons, selective reading, dramatization, independent question formation and discussion based on the text, as well as the encouragement of creative thinking through stories and rebuses, all contribute to the enhancement of each student's thinking, perception, and communication culture. Unlike traditional methods, this approach serves to develop the student not merely as a recipient of knowledge, but as an active, independent, and creative individual.

As a result, teaching literary works with modern methods and utilizing creolized texts increases students' capacity for reading, analysis, independent thinking, and reflection. Furthermore, this approach has a positive impact on the development of children's aesthetic taste, emotional world, and personal growth, helping them to become well-rounded individuals who meet the demands of modern society. Therefore, the implementation of innovative and integrated methods in teaching literary works at the primary level is considered both a relevant and effective direction today.
