UZBEK WOMEN ON THE HOME FRONT DURING WORLD WAR II: BASED ON ARCHIVAL DOCUMENTS

Erkinboyev Fozilbek Zokirjon o‘g‘li
A fourth-year student of History (with a specialization in Public Law)
at Navoi State University

Abstract: This study explores the role of Uzbek women in the labor front during World War II (1941–1945), based on archival documents, governmental reports, and periodicals of the time. With millions of men conscripted into the Red Army, women in Uzbekistan stepped into traditionally male-dominated fields such as agriculture, industry, and public administration. The article highlights both their contributions and challenges, offering a critical analysis of Soviet wartime propaganda and the lived experiences of Central Asian women. Archival materials provide a more nuanced understanding of gender roles, patriotism, and labor mobilization in wartime Uzbekistan.

Keywords: Uzbekistan, World War II, women, labor front, archives, gender roles, Soviet Union

The Second World War brought dramatic social, economic, and political changes to the Soviet Union, including its Central Asian republics. In Uzbekistan, one of the rear regions of the USSR, the war effort required the mobilization of all available human and material resources. While the battlefield was far from Central Asia, the labor front became an essential arena of wartime production and support.

With a significant portion of the male population drafted into the military, Uzbek women were forced to assume new roles in factories, farms, and state institutions. Their participation was framed by official propaganda as a patriotic duty, yet their labor was often underappreciated, underpaid, and poorly documented.

This article aims to reconstruct the reality of Uzbek women’s contribution to the labor front during WWII using archival sources, including state reports, factory statistics, letters, and personal testimonies stored in the National Archive of Uzbekistan. The research challenges stereotypical portrayals and reveals the depth of female resilience and sacrifice.

This study is based on a qualitative analysis of:

- **Archival materials** from:
  - The Central State Archive of Uzbekistan (TsGA RUz)
  - Archives of the Ministry of Labor and Social Affairs (1941–1945)
  - Women's Committee reports and factory logs from Tashkent, Samarkand, and Andijan
- **Soviet-era newspapers and journals**:
  - *Pravda Vostoka*, *Kyzyl O‘zbekiston*, *Lenin Yo‘li*
- **Oral histories and letters**:
  - Personal correspondences of women laborers
  - Wartime memoirs preserved in regional museums
- **Methodological approach**:
  - Historical-documentary analysis
  - Gender analysis within the wartime Soviet ideological framework

The analysis of archival records reveals the following key findings:

- **Workforce Transformation**:

- By 1943, women made up more than 60% of Uzbekistan's industrial and agricultural workforce.
- Thousands of women worked in textile and food-processing factories, ammunition plants, and on collective farms.

• **Special Training and Education**:

- Short-term vocational courses were organized to train women as mechanics, tractor drivers, welders, and engineers.
- Archival data shows that 75% of new tractor operators in 1944 were women.

• **Propaganda vs. Reality**:

- Soviet propaganda portrayed Uzbek women as heroic "labor soldiers," but many archival documents report poor working conditions, food shortages, and lack of child care.
- Women's letters to local councils describe exhaustion, lack of shoes, and the burden of simultaneously managing households.

• **Social Impact**:

- The war period marked the beginning of a long-term shift in gender roles in Uzbek society.
- Many women who entered the labor force during the war remained employed after 1945, contributing to post-war reconstruction and social change.

The wartime mobilization of women in Uzbekistan was both a necessity and a turning point in the gender dynamics of the region. The state's demand for labor turned traditional social norms upside down, leading to a temporary redefinition of women's roles in society.

Despite government rhetoric about equality and heroism, real working conditions were harsh. The gap between ideological representation and lived experience is starkly evident in archival sources. Women endured physical labor, social isolation, and inadequate support systems, yet they managed to maintain industrial and agricultural production.

Moreover, Uzbek women had to navigate dual pressures: fulfilling state demands while preserving familial responsibilities. Many became heads of households, caring for children and the elderly while working full-time in fields or factories. These stories reflect immense strength and determination, often overlooked in official narratives.

The war catalyzed social transformation: while many women returned to domestic life after 1945, others remained active in public life, laying the groundwork for future advances in education and employment.

The contribution of Uzbek women to the home front during World War II was substantial and multifaceted. Through physical labor, organizational leadership, and personal sacrifice, they played a vital role in sustaining the war effort and the nation's internal stability.

Archival documents provide essential insights into the real conditions and experiences of these women, beyond idealized propaganda. Their legacy continues to shape Uzbekistan's social history, particularly in the evolution of women's roles in public and economic spheres.

Future research should further explore regional differences, ethnic dynamics, and the long-term impact of wartime labor on women's post-war lives in Uzbekistan and the broader Soviet Central Asian context.
