Assessing the competitiveness of uzbekistan's banks in the global banking services market

N.N.Izatova – Asia international university, Bukhara, Uzbekistan

Abstract: The banking sector in Uzbekistan has undergone significant transformation in recent years, driven by economic liberalization and reforms aimed at integrating the country into the global financial system. This article evaluates the competitiveness of Uzbekistan's banks in the global banking services market, analyzing key factors such as financial performance, regulatory frameworks, technological adoption, and market structure. Drawing on empirical studies and industry data, the paper highlights strengths, including improved liquidity and capital adequacy, and challenges, such as state dominance, limited financial innovation, and regulatory gaps. The findings suggest that while Uzbekistan's banks have made strides toward modernization, achieving global competitiveness requires further reforms in governance, digitalization, and market liberalization.

Keywords: Banking competitiveness, Uzbekistan, global financial markets, financial liberalization, state-owned banks, digital banking, regulatory reforms.

Uzbekistan's banking sector has been a cornerstone of the country's economic reforms since 2017, with initiatives aimed at transitioning from a centrally planned to a market-based economy. Despite these efforts, the sector faces challenges in achieving competitiveness in the global banking services market. According to the World Bank (2024), Uzbekistan's financial sector is still characterized by high state ownership, with state-owned banks controlling over 76% of total assets and 81% of loans. This article assesses the competitiveness of Uzbekistan's banks by examining their financial performance, regulatory environment, technological advancements, and structural constraints, drawing comparisons with global standards and practices in other transition economies.

The competitiveness of banks is often measured through financial metrics such as return on assets (ROA), return on equity (ROE), capital adequacy, and liquidity ratios. A 2022 study on Uzbekistan's banking sector found that while banks exhibit strengths in capital adequacy and liquidity, they lag in asset quality and management efficiency. For instance, the Center for Economic Research and Reforms (CERR) reported in 2024 that Uzbekistan's banking sector demonstrated stability, with top banks like Uzpromstroybank and Microcreditbank improving their financial attractiveness and liquidity. However, the sector's profitability is hindered by high operating costs and government ownership, which negatively impact ROA and ROE. Compared to global benchmarks, such as those set by the Basel Committee, Uzbekistan's banks fall short in efficiency and risk management. The CAMELS framework, widely used to assess bank performance, indicates weaknesses in asset quality and management practices in Uzbekistan. For example, state-owned banks, which dominate the market, often prioritize developmental goals over profitability, leading to lower financial returns compared to private banks in competitive markets like Turkey or Poland.

A robust regulatory framework is critical for fostering competitiveness in global banking. Uzbekistan has made progress in adopting international standards, such as International Financial Reporting Standards (IFRS) and Basel Committee recommendations. However, the sector still faces challenges, including weak corporate governance, limited transparency, and inadequate risk-based supervision. The Central Bank of Uzbekistan has implemented reforms to improve liquidity and solvency, aligning with International Monetary Fund (IMF) indicators, but gaps remain in areas like deposit insurance and bank resolution frameworks. State dominance in the banking sector distorts

competition, as state-owned banks are often tasked with non-core functions like tax withholding and supporting government development strategies. This contrasts with more competitive markets, such as Turkey, where financial reforms have enhanced efficiency and reduced state influence. The slow pace of privatization, despite government commitments to reduce state-owned enterprises by 75% by 2025, further limits market dynamism.

In the global banking services market, technological innovation is a key driver of competitiveness. Uzbekistan's banks have begun adopting digital banking solutions, with institutions like KDB Bank Uzbekistan introducing SWIFT Global Payments Innovation (GPI) services for real-time international payment tracking. However, digital banking adoption remains limited compared to global leaders. A 2024 study highlighted barriers such as low financial literacy, underdeveloped digital infrastructure, and regulatory constraints as impediments to digital banking growth in Uzbekistan. In contrast, countries like Turkey and Vietnam have leveraged digitalization to enhance customer access and operational efficiency, positioning their banks more competitively in global markets. Uzbekistan's banks need to invest in fintech, mobile banking, and cybersecurity to align with global trends and attract foreign investment.

The structure of Uzbekistan's banking sector, dominated by state-owned banks, limits competitive dynamics. Private and foreign banks, such as KDB Bank Uzbekistan, are niche players with limited market share. This contrasts with transition economies like Poland and Vietnam, where privatization and foreign direct investment (FDI) have fostered competitive banking environments. The lack of competitive neutrality and the state-bank nexus inhibit fair competition, as state-owned banks benefit from government support, crowding out private players. Moreover, Uzbekistan's banking sector faces challenges in financial intermediation, with limited credit access for small and medium enterprises (SMEs) compared to larger firms. A 2020 study noted that banks' risk assessment practices for SME financing are underdeveloped, further constraining economic diversification and competitiveness.

Several factors hinder Uzbekistan's banks from competing globally: high state ownership, with over 76% of banking assets controlled by state-owned banks, reduces market-driven competition; limited financial innovation, with slow adoption of digital banking and fintech solutions, restricts customer reach and operational efficiency; regulatory gaps in risk-based supervision, governance, and transparency hinder alignment with global standards; a shortage of skilled professionals in the banking sector deters FDI and innovation; and high inflation and currency depreciation reduce the attractiveness of financial instruments like government securities, impacting bank liquidity.

To enhance the competitiveness of Uzbekistan's banks in the global market, several measures are recommended. First, accelerating privatization can foster competition and attract foreign investment, following the example of successful transitions in Poland and Vietnam. Second, strengthening regulatory frameworks by adopting advanced risk-based supervision, enhancing corporate governance, and aligning with Basel III standards is essential. Third, promoting digitalization through investments in fintech infrastructure and digital banking platforms can improve customer access and operational efficiency. Fourth, developing training programs to build a skilled banking workforce capable of meeting global standards is critical. Finally, improving risk assessment frameworks to expand credit access for SMEs can drive economic diversification.

Uzbekistan's banking sector has made notable progress in modernizing its operations and aligning with international standards. However, challenges such as state dominance, limited technological adoption, and regulatory gaps hinder its competitiveness in the global banking services

market. By accelerating privatization, strengthening regulatory frameworks, and embracing digital innovation, Uzbekistan's banks can enhance their efficiency, attract foreign investment, and compete effectively on the global stage. Continued reforms are essential to position the sector as a driver of sustainable economic growth.
