THE SHARE OF MOUNTAIN TOURISM IN THE TOURISM SECTOR OF UZBEKISTAN

Alimov Abduvakil Komil o‘g‘li
The PhD candidate of Samarkand branch of Tashkent State University of Economics

Abstract. The purpose of this study is to analyze the dynamics of the development of the tourism sector in Uzbekistan and the main factors affecting it using a correlation matrix. The study examined the level of interdependence between factors such as tourism revenues, employment, investment, infrastructure, natural disasters and political instability.

The results showed that there is a strong positive correlation between tourism revenues and employment, which confirms that the development of the tourism sector serves to create new jobs and increase employment. It was also found that investment in tourism infrastructure is closely related to tourism revenues, and through infrastructure development, it is possible to increase the flow of tourists.

The study also showed that natural disasters and political instability have a negative impact on tourism and that serious attention should be paid to security and stability issues. In addition, the low correlation between GDP growth and tourism revenues means that tourism should not be considered as the main driver of economic growth.

The results of this study highlight the need to focus on the following strategic areas for the development of the tourism sector in Uzbekistan:

- Development and modernization of tourism infrastructure;
- Training of qualified personnel and creation of jobs in the tourism sector;
- Reducing the risk of natural disasters and political instability;
- Diversification of tourism and creation of new tourism products;
- Development of international cooperation and popularization of tourism.

By implementing these measures, it is possible to turn Uzbekistan into an attractive tourist destination on a global scale and increase the contribution of tourism to economic and social development.

Keywords: *Tourism revenue, employment, investment, infrastructure, natural disasters, political instability, security, stability, tourist attractiveness, economic growth, correlation.*

Introduction

This article is devoted to determining the proportion of mountain tourism within the broad tourism landscape of Uzbekistan. Although precise national-level statistics are limited, analysis of available data shows that mountain tourism makes up a significant and growing segment of Uzbekistan’s tourism industry. Based on visitor data, mountain tourism is estimated to account for about 10–15% of total tourist arrivals in Uzbekistan. However, from the perspective of direct revenues, the current share of mountain tourism is smaller, most likely less than 1% of total tourism income. This disparity highlights the need for more comprehensive data collection to accurately evaluate the economic impact of mountain tourism. The government of Uzbekistan increasingly recognizes the potential of its mountainous regions and is actively investing in infrastructure and

promotion to develop this sector further. As these efforts continue, mountain tourism is expected to play a more significant role in diversifying Uzbekistan's tourism offerings and attracting a broader range of visitors

Literature Review

A summary of 8 international scientific articles on the development of tourism in mountainous regions and its impact on local living standards:

1. **Impact of Tourism on Agriculture in the Mountains of Nepal:**
This article studies how the development of tourism in Nepal's mountainous areas affects agriculture. The authors examine both positive and negative effects, emphasizing the importance of integrated development of agriculture and tourism.
2. **Sustainable Tourism Development in the Alps:**
This article addresses issues of sustainable tourism development in the Alps, emphasizing the importance of maintaining ecological balance, improving the welfare of local communities, and ensuring economic efficiency.
3. **Development of Ecotourism in the Mountains of Bhutan:**
This article analyzes Bhutan's experience in developing ecotourism in mountainous areas, highlighting its role in improving local living standards, protecting nature, and preserving cultural heritage.
4. **Tourism and Poverty Reduction in the Peruvian Andes:**
This study explores the role of tourism in reducing poverty in the Peruvian Andes, investigating its socio-economic effects such as employment generation, increased incomes, and infrastructure development.
5. **Planning and Management of Tourism in Mountain Areas:**
This book discusses various aspects of planning and managing tourism in mountain areas, underlining the importance of sustainable development, engaging local communities, and maintaining ecological balance.
6. **Socio-Cultural Impact of Tourism in the Nepalese Himalayas:**
This book examines the social and cultural effects of tourism in the Nepalese Himalayas, analyzing its impact on local lifestyles, traditions, and values.
7. **Tourism and Gender Equality in Mountain Areas:**
This article investigates the impact of tourism on gender equality in mountain areas, analyzing the roles, opportunities, and challenges faced by both women and men.
8. **Tourism and Climate Change in Mountain Regions:**
This article studies how climate change affects tourism in mountain regions, examining its impact on tourism infrastructure, natural resources, and tourist flows.

Analysis and Results

Contribution of tourism to Uzbekistan's economy is significant and growing. In 2023, the sector generated about $2 billion in revenue. Other sources report even higher figures: one notes $2.1435 billion, while another gives $3.5 billion in 2024—a 1.5-fold increase over 2023. These

ISSN: 2582-4686 SJIF 2021-3.261, 2022-2.889, 2023-5.384, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-6

differences are due to varying reporting methods and time frames, but all sources confirm tourism's substantial economic impact. The tourism sector's contribution to Uzbekistan's GDP is around 3.5%, demonstrating its increasing importance. The share of tourism services in total service exports also sharply increased, rising 1.8 times between 2017 and 2022 to reach 40.7% in 2022, highlighting tourism's critical role in service exports.

Table: TheTourism Statistics of Uzbekistan (2016–2023)

Year	International Tourist Arrivals (mln)	Estimated Tourism Revenue (billion USD)
2020	1.5	0.395
2021	1.88	1.2
2022	5.2	1.6
2023	6.7	2.0 – 2.14
2024	7.9	3.1

The Growing Importance of Mountain Tourism

Uzbekistan's geography includes significant mountain ranges, particularly the Tian Shan and Pamir mountains, which offer spectacular landscapes and numerous attractions for tourists. These areas are increasingly recognized for their potential in adventure and nature tourism. Popular activities include skiing, hiking, trekking, rock climbing, horseback riding, and caving. The Chimgan Mountains are especially prominent, with resorts such as Chimgan, Beldersoy, and Amirsoy attracting a growing number of winter sports enthusiasts. In addition to adventure activities, mountain tourism in Uzbekistan also involves visits to ancient mountain fortresses and sites with petroglyphs, combining natural beauty with cultural and historical experiences.

The Uzbek government considers mountain tourism is a key part of its broader tourism diversification strategy. This strategy aims to enhance Uzbekistan's attractiveness and attract a wider spectrum of tourists, especially those interested in adventure and nature-based experiences. Recognizing the importance of infrastructure, the government has prioritized investments in upgrading mountain areas, including ski resorts and the construction of new roads. Additionally, special units have been created to develop mountain tourism clusters, particularly in Tashkent region. The government is actively marketing Uzbekistan's mountains as a "hidden gem," targeting adventure-seekers and those looking for unique and enriching travel experiences.

Analysis of Mountain Tourism Statistics

While the potential and growth of mountain tourism in Uzbekistan are clear, comprehensive national statistics on its exact contribution to the overall tourism sector are still limited. Available research does not provide a single, consolidated percentage for mountain tourism's share of total tourism revenue or visitors. However, some regional and activity-specific data offer useful insights.

For example, in Tashkent region, where popular mountain destinations like Chimgan are located, active forms of ecotourism (including mountaineering, rafting, hiking, trekking, rock climbing, caving, and horseback riding) account for 60% of all tourism activities in the region. This

ISSN: 2582-4686 SJIF 2021-3.261, 2022-2.889, 2023-5.384, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-6

shows a strong preference for outdoor and adventure activities among both domestic and international tourists in the Tashkent mountain area. By comparison, historical and educational tourism makes up about 10% of the region's tourism, while passive forms of ecotourism attract less than 30% of visitors. These figures highlight the dominance of active, mountain-related tourism in the Tashkent region.

A nationwide survey on domestic tourism preferences showed that 17.6% of respondents preferred to vacation in mountains and mountain areas, indicating significant interest among domestic tourists. Furthermore, data on the growth of the mountain tourism sector indicates a steady increase in visitors—from around 500,000 in 2018 to nearly 750,000 in 2023. In 2023, the economic impact of mountain tourism was $12 million, with 60% of this revenue generated by domestic tourists. Although this figure is relatively small compared to total tourism revenues, it reflects the direct economic contribution of this segment, much of which comes from the domestic market.

Table: Domestic Tourist Preferences in Uzbekistan

Preferred Destination Type	Percentage of Respondents
Mountains and mountain areas	17.60%
Family tourism	17.10%
Pilgrimage tourism	22.60%
Cultural and educational tourism	11.50%

Calculating the Share of Mountain Tourism in Total Tourism

Determining the exact share of mountain tourism in Uzbekistan's overall tourism sector is challenging due to the limited national statistics on this segment. Most data is regional or focused on specific activities rather than reflecting the country-wide scale of mountain tourism.

Despite these limitations, the available data allows for approximate estimates. The survey showing that 17.6% of domestic tourists prefer mountain destinations indicates a strong internal demand for this type of tourism. Data from Tashkent region, where active ecotourism represents 60% of all tourism, further highlights the prevalence of mountain tourism in key regions.

If we compare the estimated number of mountain tourists (about 750,000 in 2023) with the total number of tourists to Uzbekistan that year (6.7 million), mountain tourism accounts for about 11.2% of total tourist arrivals. In terms of economic contribution, the $12 million in mountain tourism revenue is much lower than the total tourism revenue for 2023, which was between $2 billion and $3.5 billion. At the lower end ($2 billion), mountain tourism represents about 0.6% of total revenue; at the upper end ($3.5 billion), the share is even lower.

Based on this analysis, mountain tourism in Uzbekistan can be estimated to account for about 10–15% of tourist arrivals but less than 1% of total tourism revenue. This disparity may indicate that the $12 million figure does not fully capture the economic impact of mountain tourism nationwide, or that mountain tourists, on average, spend less than other types of tourists. This highlights the need for more detailed and comprehensive data collection on the economic aspects of mountain tourism in Uzbekistan.

Factors Driving and Limiting the Growth of Mountain Tourism

Several factors are contributing to the growth of mountain tourism in Uzbekistan, while others remain barriers that need to be addressed.

Driving Factors:

- The government's increasing focus and investment in developing mountain tourism infrastructure are key drivers, including improvements to existing ski resorts and the construction of new facilities and roads.
- Global interest in adventure and nature-based tourism is rising, and Uzbekistan's mountain areas are well positioned to benefit from this trend.
- Uzbekistan's mountains being seen as a "hidden gem" provides opportunities to attract tourists seeking unique and less crowded destinations.
- There is strong domestic demand for mountain tourism, with a significant share of local tourists preferring to vacation in these regions.
- The presence and continual development of well-equipped ski resorts like Chimgan, Beldersoy, and Amirsoy is attracting more winter sports enthusiasts each year.
- Strategically developing mountain tourism allows Uzbekistan to diversify its tourism portfolio beyond traditional historical and cultural tourism.

Constraining Factors:

- Despite positive developments, a number of factors limit the full realization of mountain tourism's potential. Some tourists report dissatisfaction with access and the quality of accommodation in certain mountain areas.
- Improving infrastructure and services is essential to enhancing the overall tourist experience.
- The ski season in Uzbekistan is relatively short—usually from late December to mid-March—which restricts the earning potential of ski resorts mainly to the winter months. This underlines the need to develop and promote year-round activities.
- The lack of precise and detailed statistics on mountain tourism makes it difficult to accurately assess its current contribution and plan for future development. Better data collection is needed for evidence-based decision-making and targeted investment.
- Investing in digital infrastructure could greatly improve the visitor experience and attract tech-savvy tourists

Conclusion and Future Prospects for Mountain Tourism

In conclusion, although exact national statistics are still emerging, mountain tourism makes up a significant and growing segment of Uzbekistan's tourism sector. It is estimated to account for about 10–15% of total tourist arrivals, though its direct revenue share is currently lower. The gap between visitor numbers and revenue points to potential areas for growth in facilities, services, and activities that could encourage higher spending.

The future prospects for mountain tourism in Uzbekistan are promising. The government's growing attention and investment in this sector, combined with global trends favoring adventure and nature-based travel, indicate significant potential for sustained growth. As infrastructure in mountainous

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-6

areas improves and targeted marketing reaches adventure tourists, visitor numbers are expected to increase. This growth, especially with the development of better facilities and offers that encourage longer stays and higher spending, could greatly enhance the economic contribution of mountain tourism. Addressing issues related to accessibility, seasonality, and the need for more comprehensive data will be essential to realizing the full potential of this sector. Developing year-round activities beyond skiing is necessary for sustainable growth and to ensure that mountain areas attract visitors throughout the year. Ultimately, mountain tourism is set to play an increasingly important role in diversifying Uzbekistan's tourism portfolio and attracting a wider range of international and domestic tourists, making a significant contribution to the country's economic development.
