WAYS OF SUSTAINABLE SOCIO-ECONOMIC DEVELOPMENT OF REGIONS BASED ON ADVANCED FOREIGN EXPERIENCE

Alisher Khudoynazarovich Shadiev , Bukhara state university PHD student , Asia international university, teacher

Abstract: This article presents a comparative analysis of the experience of advanced countries such as Finland, Sweden, the United Kingdom, Germany, Switzerland, Japan, France, Canada, the United States, and South Korea in the organizational and economic development of regions. Based on foreign practices, conceptual approaches have been developed to improve Uzbekistan's system of planning and managing its socio-economic policy.

Keywords: economic security, socio-economic systems, social market model, corporate model, financial system, social policy, tax system, labor market, strategic planning.

Latest thirty year during globalization process economic in the fields big to changes take Since the 1980s , international trade size and countries between capital movement of freedom example unseen at the level expansion previously there is was balance fundamentally changing sending this balance of countries international streams order to direct , to direct and in restriction strong role based on formed was [1].

Economy stable developed or economic from crises successful came out countries to experience appropriate , economical security in providing to the program directed approach not only working release and quantitative to indicators , but social and quality Pay attention to the indicators as well. This approach territorial socio-economic systems for effective individual projects that done increase with one at the time take Socio - economic programming clear tasks to perform during the public attraction did without done increase state management efficiency international to standards to adapt opportunity gives .

K. Clement , M. Hansen and K. Bradley [4] himself in research Europe Union northern countries – Denmark , Sweden and Norway experience in the example of regional stable development features deep studied .

D.Karimov [3] “ Regions of the Republic socio-economic development analysis in doing rating assessment system essence and " advantages " research at work national of the economy stable development and his/her competitiveness in providing of the regions socio-economic from the potential more efficient use , areas economy development indicators in formation rating assessment system importance praise advantages , in our country regions development degrees comparative and complex analysis to do based on economic decisions acceptance to do efficiency increase , as well as areas to develop aimed at economic politics further improvement on the surface scientific search the results statement reached .

In this place socio-economic system to the concept accuracy input to the goal appropriate is , socio-economic system is material and intangible of resources distribution , products , services working issuance , distribution , exchange and consumption to be done with related social and economic institutions (entities) and of relationships mutual connected and mutual impact doer whole is a complex .

Socio-economic system , other every how system like systematic adjectives with separated They are between all other of relationships come exit together standing main economic attitude

important place holds . Exactly this attitude based on increasingly becoming complicated going socio-economic relationship system formed , this main attitude there is under the circumstances resources distribution and proportions save to stand the most simple shape counted , all of the system basically organization does [5].

Developed countries between following market economy models is separated :

–Social-market model (Germany , France);

–Social-democratic model (Sweden);

–Neoliberal model (USA , England);

–Corporate model (Japan);

–South Europe development model (Italy , Greece , Portugal).

Of these , neoliberal socio-economic model main to the characteristics attention focusing The neoliberal model is an economic freedom , private the property and limited state intervention main principle as acceptance did market economy model is economic efficiency , innovation activity and global competitiveness to achieve goal does .

USA and In Canada economic security provision experience strategic programming principles current to grow to the goal appropriate and necessary that It also shows strategic socio-economic programming system territorial economic security in providing strategic goals , tactics tasks , factors and organizational tools own inside take , strategic programming territorial problems and prospective tasks and goals cover takes [2].

Positive aspects stopped passing if we are first , strategic programming complex and systematic approach provides that is , socio-economic development all stages including strategic from goals pulling , tactical tasks and them done increase up to the means was processes cover It takes . by means of economic security in providing different directions integral connects and sectoral inconsistencies eliminate will reach .

Secondly , long term stability to provide service does , that is , strategic planning territorial development far term prospects As a result , economic security in strengthening short term measures not , maybe stable strategies is acted upon .

Third , resources reasonable use secured , strategic programming based on done increaseable actions financial , labor , natural resources effective distribution and targeted redirect opportunity This gives economic security for necessary was resource base saving and to strengthen help gives .

Fourth , social factors in consideration takes , but , economically to indicators not , maybe social quality Pay attention to the indicators as well. to be given population marriage level , employment , education and health storage systems development through socio-economic to balance achievement provides .

Fifth , regional problems in place solution to do opportunity giving , every for an area separately strategic programs working exit local features into account take , efficiency increases and this aspect decentralized management to the principles full-fledged suitable is coming .

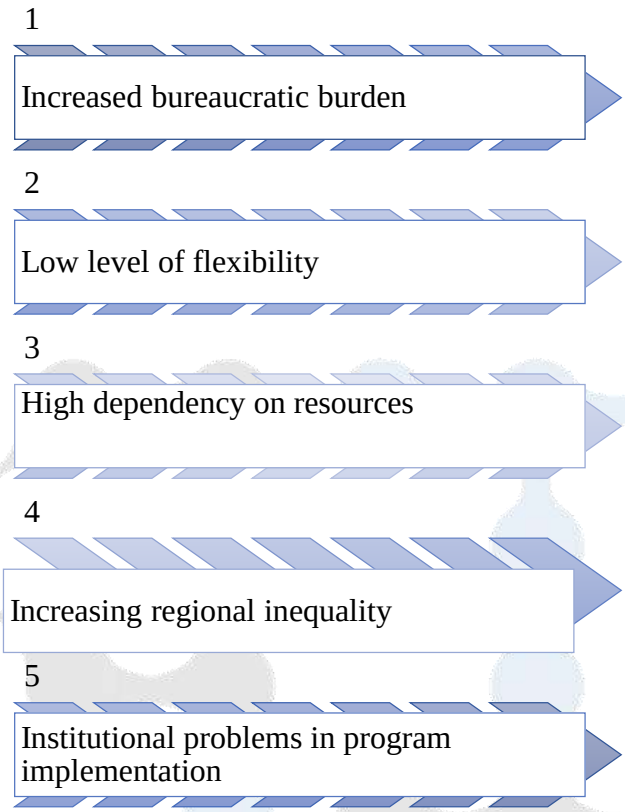

Figure 1. Strategic programming negative aspects[1]

Strategic programming negative aspects attention focusing (Figure 1), many step by step documents working to come out , to coordinate and demanding monitoring , bureaucratic of procedures to increase and decision acceptance to do processes to slow down reason will be . Far term strategic in plans designated goals many in cases sharp variable market or political to the conditions adapt cannot , as a result , strategies are not based on real reality difference to do possible . Other from the side , strategic programs done increase often big in quantity financial resources and human requiring capital , limited to resources has was in the regions this strategies almost on paper mold to leave danger observation possible . Also , resources distribution or main accent k more economic in terms of developed to the regions if you look closely , less developed regions out of consideration aside mold , country inside socio-economic imbalance increase possible . Strategic programs done in increasing strong institutions , strictly responsibility and control mechanisms are required , if systems weak if , strategies ineffective become to remain possible .

Regions organizational economic develop according to Finland , Sweden , Great Britain Britain , Germany , Switzerland , Japan , France , Canada , USA and South Korea like advanced countries experience comparative analysis (see Table 1).
