Ways to form and develop a green economy in the Republic of Uzbekistan

Umarova Hulkar Umidulloyevna-
Asia international university

Abstract . This in the article in our country green the economy formation and develop roads analysis will be done.also ecological problems solution to do and economic to grow stabilization for state policy , innovation technologies current to be restored , to be restored renewable energy sources development , waste reduce such as directions statement done .

Keywords : Green economy, sustainable development , environmental politics , again renewable energy , innovation technologies, resources saving , waste reduce ,

Current global development during in our country green the economy develop of our country ecological stable and competitive to the economy has in being important factor In this regard , our President Shavkat Mirziyoyev has declared 2025 as the " Environment and green economy year " announced they do and " Weather and of water pollution , soil erosion , desertification , fossilization fuels countless use global warming , natural disasters to increase take coming , environment and population to your health damage Therefore , green to the economy to pass " it is a necessity [1]" they insist in our republic green to the economy transition importance by designating gives . .Green of the economy main purpose natural from resources effective use , ecological stability provision and socio-economic development It is harmony .

In our country green the economy formation and develop regarding done increasing measures wide extensive and systematic in a way take It is obvious that example as Uzbekistan Republic Presidential Decree No. PQ-4477 of October 4, 2019 with the years 2019–2030 cover "Green Economy " to pass strategy " approval our vision This is possible . strategy of the economy energy efficiency increase , increase recovering energy from sources use expansion , natural from resources reasonable use and climate to the changes to adapt to provide goal The strategy main tasks of the following consists of :

1. Greenhouse gases gross internal product per unit relatively comparison allocations by 10 percent from 2010 levels reduction ;

2.Energy consumption to do diversification and again recovering energy sources share electricity energy working release general 25 percent of the volume more to deliver ;

3. Up to 100 percent population and economy networks modern , cheap and reliable from energy use opportunity with to provide ;

4.Industrial enterprises infrastructure modernization , energy efficiency by 20 percent less not happened to the amount increase and pure and ecological safe technologies expansion ;

5. All of the economy in networks from water use efficiency noticeable at the level increase ;

6. Land degradation meeting according to neutral to the balance achieve .

From this except Uzbekistan Republic Economic progress and poverty reduction ministry by Asian Development bank with in cooperation state with the participation of in enterprises ecological , social and corporate governance (ESG) principles current to grow according to events done These principles are being implementation to grow through of enterprises stable development and ecological responsibility increase goal is being done . With this together Green Hub platform Uzbekistan

Republic Economic progress and poverty reduction ministry in the presence of organization done It is green . the economy development , climate to the changes adaptation and green to grow provision for the purpose activity Platform through green technologies current investment attraction to do and international cooperation to develop aimed at projects done is being increased .

"Towards a green economy" to pass strategy done increase

Uzbekistan on December 2, 2022 Republic President's decision with the "Green Economy" by 2030 to pass strategy [2]was approved . This strategy within following documents working output :

a) Green by 2030 to the economy to pass and green to grow provision program;

b) industrial sectors green to the economy to pass and energy thrift provision according to concept ;

c) Actions The plan also works issued of the product energy capacity to 20 percent by 2026 reduce economy in 2022–2026 with the aim of in networks fuel and energy resources saving targeted parameters marked .

In our country Greenhouse gases release order to plant according to

Greenhouse in 2022–2026 gases release state by order to plant infrastructure step by step creation This process is the following own inside takes :

a) Greenhouse gases release state by into account to take and their state cadastre to conduct ;

b) Carbon units register formation and to conduct ;

c) Economics networks in the section greenhouse gases release reduction targeted indicators to mark ;

g) Greenhouse gases release reduction according to activity state by support

"Green Certificates " system in the republic current to be from June 1, 2023 products working in the release ecology and to the environment the effect restriction according to being laid requirements based on " green" "certificates " system current to be This system is through working issued of products ecological cleanliness and to the environment impact is evaluated .

Next in years green to the economy transition efficiency increase for the purpose Climate change monitoring system (MRV) in the field This means that from January 1, 2024 , all greenhouse gases cover recipient Climate change monitoring, reporting in the field to give and of inspection modern system (MRV) on the road to be put This is marked . system through greenhouse gases monitoring the release and report to give processes is automated .

Also , by April 1, 2024, " green " energy certificates turnover market principles based on on the road to be put provision marked . Through this again recovering energy from sources working issued of energy ecological cleanliness is evaluated and market through trade done increased.These starting from April 1, 2024 investment projects planning and done from increasing previous in stages their energy efficiency evaluated , projects as a result shortened greenhouse gas size will be certified and external to the markets is redirected .

Current in Uzbekistan from 2025 onwards green to the economy to pass measures further systematic organization to be World Bank and Europe recovery and progress bank with in cooperation the economy decarbonization and green development to the model to pass according to far term strategy working This is being released . strategy Paris According to Article 4 of the Agreement

[2]Uzbekistan by 2030" The Republic's ' green ' economy to pass aimed at reforms efficiency increase according to measures "about" President Resolution (No. PQ-436, December 2, 2022)

economy in networks carbon neutrality achieve for done increaseable measures and investment plans own inside takes .

In conclusion, the Republic of Uzbekistan has identified the transition to a green economy as one of the priority areas of the national development strategy, paying great attention to the harmonization of environmental sustainability and economic growth. The measures adopted and implemented in recent years are aimed at increasing energy efficiency, expanding the use of renewable energy sources, reducing greenhouse gas emissions, introducing environmental standards and attracting investments. At the same time, international cooperation in the field of environmental protection, adaptation to climate change and the development of "green" technologies is expanding in the country. Systematic work in these areas is an important factor in ensuring the stability and competitiveness of the Uzbek economy and a healthy environment for future generations .

The following proposals are made on ways to form and develop a green economy in our country:

1. In improving legislation and policy, it is possible to mention the development of new laws and regulatory legal acts taking into account the principles of a green economy and the introduction of environmental taxes and incentive mechanisms, for example, a pollution tax, and incentives for enterprises using green technologies.

2. In the development of renewable energy sources, it is possible to mention the widespread use of clean energy sources such as solar, wind, and hydropower and their support at the state level.

3. In the development of innovations and technologies, it is possible to propose the allocation of grants for scientific research on green technologies, energy efficiency, and waste reduction, and the development of special incubators to support startups and small businesses.

Our conclusion is that international cooperation in the fields of environmental protection, climate change adaptation, and the development of "green" technologies is expanding in the country. Systematic work in these areas is an important factor in ensuring the stability and competitiveness of the Uzbek economy and a healthy environment for future generations.
