Regulatory Mechanisms for the Islamic Capital Market in Uzbekistan Based on the Malaysian Model

Abdumutaliyeva Feruza Egamberdi qizi
Master's student in the faculty of "International Commercial Law"
Tashkent State University of Law
abdumutaliyevaferuza@gmail.com

Abstract: This article explores the necessity of developing a legal and regulatory framework for the Islamic capital market (ICM) in Uzbekistan by analyzing and drawing lessons from the successful model of Malaysia. As Uzbekistan currently lacks a functioning Islamic capital market and dedicated regulation in this area, the study examines Malaysia's experience in establishing a well-structured, Shariah-compliant capital market backed by a strong legal system and institutional support. Through comparative legal analysis and normative reasoning, the article identifies key regulatory mechanisms—such as the role of the Securities Commission, the integration of Shariah governance, and the legal treatment of sukuk—that can be adapted to the Uzbek context. Based on this analysis, the paper provides policy-oriented legal recommendations aimed at guiding Uzbekistan in the gradual and effective implementation of an Islamic capital market in line with international standards.

Keywords: Islamic capital market, Uzbekistan, Malaysia, sukuk, regulation, Shariah governance, legal reform, AAOIFI, IFSB

Annotatsiya: Mazkur maqolada O'zbekistonda islom kapital bozorini joriy etish zarurati va uning huquqiy-me'yoriy asoslarini shakllantirish masalalari ko'rib chiqiladi. Ayni paytda O'zbekistonda islom kapital bozori faoliyati va unga oid alohida qonunchilik mavjud emas. Shu bois, maqolada bu yo'nalishda ilg'or tajribaga ega bo'lgan Malayziya modeli chuqur tahlil qilinadi. Malayziyada islomiy moliya prinsiplariga asoslangan kapital bozori kuchli huquqiy infratuzilma va institutsional mexanizmlar bilan tartibga solinadi. Qiyosiy-huquqiy tahlil va normativ yondashuv asosida maqolada Malayziya tajribasidagi muhim mexanizmlar — Qimmatli qog'ozlar komissiyasining roli, shariat asosidagi boshqaruv tizimi, sukuklar bilan bog'liq huquqiy tartibotlar — o'zbek huquqiy tizimiga moslashtirish imkoniyatlari yoritiladi. Natijada, O'zbekiston sharoitida islom kapital bozorini bosqichma-bosqich va xalqaro standartlarga muvofiq joriy etish bo'yicha aniq huquqiy taklif va tavsiyalar beriladi.

Kalit so'zlar: Islomiy kapital bozori, O'zbekiston, Malayziya, sukuk, tartibga solish, shariat nazorati, huquqiy islohot, AAOIFI, IFSB.

I. INTRODUCTION

Over the past two decades, the global Islamic finance industry has experienced significant growth, particularly in sectors such as Islamic banking, takaful (Islamic insurance), and the Islamic capital market. One of the key instruments in this sector is sukuk—Islamic investment certificates—which have seen a substantial rise in issuance, especially in Muslim-majority countries. In 2017, the total volume of Islamic financial assets reached USD 2.4 trillion and is projected to grow to USD 3.4

VOLUME-5, ISSUE-5

trillion by the end of 2024[1]. Sukuk, as the second-largest component of the Islamic finance industry, plays a central role in mobilizing capital for large-scale, long-term investment projects[2].

The global financial crisis of 2007–2008 increased interest in Islamic finance, as it demonstrated stronger resilience compared to conventional financial systems[3]. Unlike traditional bonds, which are based on interest-bearing debt, sukuk represent ownership in tangible assets and generate returns based on the actual performance of those assets. This model aligns with the core principles of Islamic finance, promoting risk-sharing, ethical investment, and real asset backing.

Malaysia, in particular, has emerged as a global leader in the development of Islamic capital markets. Through a comprehensive legal and regulatory framework supported by institutions like the Securities Commission Malaysia (SC) and Bank Negara Malaysia (BNM), Malaysia has created a well-functioning environment for sukuk issuance and governance. This success has turned Malaysia into a benchmark for other jurisdictions aspiring to develop their own Islamic capital markets.

In contrast, Uzbekistan currently lacks a dedicated Islamic capital market and corresponding regulatory infrastructure. Despite increasing interest in Islamic finance, there is still no legal framework that enables the issuance of sukuk or facilitates the development of Shariah-compliant capital market instruments. Given Uzbekistan's strategic goals for financial market diversification and attracting foreign investment, there is a growing need to study successful international models and adapt them to local conditions.

Therefore, this article aims to analyze the Malaysian regulatory model for Islamic capital markets and explore how its core legal and institutional mechanisms can be applied in the context of Uzbekistan. By conducting a comparative legal analysis and providing reform-oriented proposals, the study seeks to contribute to the creation of a feasible regulatory roadmap for the future development of the Islamic capital market in Uzbekistan.

II. RESEARCH METHODOLOGY

This research employs a qualitative and normative legal methodology, with an emphasis on comparative analysis and policy-oriented legal reasoning. Since Uzbekistan currently lacks a dedicated Islamic capital market (ICM) and relevant regulatory mechanisms, the study focuses on analyzing the Malaysian model as a successful case and developing tailored legal and institutional recommendations for Uzbekistan. The research is normative and reform-oriented, aiming to propose a model legal and regulatory framework for the establishment and governance of the Islamic capital market in Uzbekistan. The Malaysian experience is used as a reference jurisdiction, selected for its robust and well-established Islamic finance ecosystem, particularly in the area of sukuk regulation and market development. This study does not merely describe the Malaysian system but evaluates its structure, institutions, legal instruments, and practical implementation to identify transferrable elements that could be adapted to the Uzbek context.

III. MAIN BODY

3.1. Supervision

VOLUME-5, ISSUE-5

Supervision is one of the important management functions and needs to be carried out in every company, because without supervision there is a possibility of fraud, irregularities, or the implementation of activities carried out not in accordance with what has been planned[4]. Supervision is the process of observing the leader of all employee work in accordance with the work that has been determined. Then supervision is progress to determine what work should be done, assess it, and correct it, if necessary, with the intention that the implementation of the work in accordance with the plan. supervision is the process of observing the implementation of the entire organization to ensure that all work is being carried out following the desired plan. There are four objectives of supervision, namely environmental adaptation, minimizing failure, minimizing costs, and anticipating the complexity of the organization. From the above opinion, it can be interpreted that supervision is the course of an observation by the leader to evaluate an activity or system to ensure that all elements function in accordance with established standards, rules, or policies

3.2. Malaysia's Regulatory Model

The rules and systems that control sukuk can be very different from one country to another in the Islamic finance world. These differences in legal development play an important role in how well sukuk markets grow around the globe. Malaysia stands out as a successful example, as it has one of the most active Islamic capital markets internationally. Its legal system is based on English common law, but it has been adjusted to follow Islamic finance rules by using clear and organized regulatory measures.

Two key institutions—Bank Negara Malaysia (BNM) and the Securities Commission Malaysia (SC)—have created a strong legal and regulatory environment that helps with issuing and managing sukuk. In Malaysia, sukuk are regulated through several important laws such as the Securities Industry (Central Depository) Act 1991, the Securities Industry Act 1983, the Futures Industry Act 1993, and the Capital Markets and Services (Amendment) Act 2011. These laws support the full process of sukuk, including issuance, trading, and settlement, while making sure everything stays in line with Shariah principles and international financial standards[5].

Thanks to this well-developed legal setup, Malaysia has become a global example for sukuk regulation and shows how important a strong legal system is for the growth of Islamic finance. The country's Islamic capital market (ICM) operates within a dual financial system, meaning Islamic and conventional capital markets function side by side under the same legal framework. However, what makes Malaysia unique is that Islamic capital market activities are regulated through a well-coordinated system of institutions, laws, and Shariah governance.

The Securities Commission Malaysia (SC) is the main authority responsible for regulating the overall capital market, including the Islamic segment. It ensures that all capital market activities, including sukuk (Islamic bonds), Islamic funds, and Islamic financial intermediaries, comply with the law and are properly supervised. The SC sets rules and guidelines, approves the issuance of sukuk, and grants licenses to capital market service providers. To ensure Islamic authenticity, it works closely with a specialized body called the Shariah Advisory Council (SAC).

The Shariah Advisory Council, which operates under the Securities Commission, is the highest authority on Islamic law in the capital market sector. Its main responsibility is to determine whether a financial product, such as a sukuk structure or an investment fund, complies with Shariah principles. The SAC reviews and approves Islamic financial instruments before they can be offered to the public. It also provides legal opinions (fatwas) that are binding for all capital market participants. This creates confidence among investors that Islamic financial products are genuinely in line with Islamic ethical standards.

In addition to the SC, Bank Negara Malaysia (BNM)—the Central Bank of Malaysia—also plays an important supporting role. While BNM is mainly responsible for regulating banking and insurance, it supports the development of the Islamic capital market by promoting financial innovation and stability. BNM supervises Islamic banks and Islamic money market operations, which are connected to the capital market. It also has its own Shariah Advisory Council for Islamic banking and takaful (Islamic insurance), and although this council works separately from the SC's SAC, they sometimes collaborate to maintain overall Shariah harmony in the financial system.

Another important institution is Bursa Malaysia, the country's stock exchange. Bursa Malaysia provides the actual platform where Islamic financial instruments—like sukuk, Islamic Exchange-Traded Funds (ETFs), and Shariah-compliant shares—are bought and sold. It maintains a list of Shariah-compliant companies, which is updated twice a year by the SC's SAC. Investors can trade in these approved companies knowing that their activities are in line with Islamic principles. Bursa Malaysia helps ensure transparency and fair access to the Islamic capital market for both retail and institutional investors.

In addition to these domestic institutions, Labuan Financial Services Authority (LFSA) regulates offshore Islamic financial activities in Labuan, a Malaysian offshore financial center. LFSA oversees the issuance of Islamic financial instruments and sukuk for international markets. It plays a key role in promoting Malaysia as a global hub for cross-border Islamic finance.

Malaysia also ensures that its laws and regulations align with international Islamic finance standards, such as those issued by AAOIFI (Accounting and Auditing Organization for Islamic Financial Institutions) and the Islamic Financial Services Board (IFSB), which is based in Kuala Lumpur[6]. These standards guide how sukuk and other Islamic financial products are structured, disclosed, and supervised. In other words, the Islamic capital market in Malaysia is regulated through a strong, coordinated framework. The Securities Commission and its Shariah Advisory Council ensure Islamic compliance in the capital market. Bank Negara Malaysia supports financial stability and innovation. Bursa Malaysia offers the trading platform for Islamic financial instruments. Labuan FSA handles offshore sukuk activities. This comprehensive system makes Malaysia one of the most advanced countries in terms of Islamic capital market development and provides a model for other countries, like Uzbekistan, to follow.

In Malaysia, sukuk (Islamic investment certificates) can be issued by various entities, such as the government, private companies, Islamic banks, and government-linked corporations. These issuers aim to raise funds in a Shariah-compliant way, meaning the transaction must avoid interest (riba), uncertainty (gharar), and unethical investments.

VOLUME-5, ISSUE-5

To begin the sukuk issuance process, the issuer must first decide which type of sukuk structure is most suitable. Some common structures used in Malaysia include Ijarah (leasing), Murabaha (cost-plus sale), Musharakah (partnership), and Wakala (agency). The structure must comply with Shariah principles, which means the return to investors should come from profit or rent—not from interest.

Once a structure is chosen, the issuer must consult with an internal Shariah adviser—an Islamic legal expert employed or engaged by the institution. This adviser reviews the transaction and confirms that it follows Islamic law. After this internal review, the structure and documentation are submitted to the Shariah Advisory Council (SAC) under the Securities Commission Malaysia (SC) for final Shariah approval.

After getting approval, the issuer must establish a Special Purpose Vehicle (SPV). The SPV is a legally independent company that exists only to manage the sukuk. It plays a very important role: it becomes the legal owner of the assets, issues the sukuk certificates to investors, and ensures that the money generated from those assets (like rental income or profits) is passed on to investors. The SPV helps to separate financial risks from the main issuer's balance sheet, providing more security and legal protection to sukuk holders. In most cases, sukuk holders do not directly own the assets—instead, they own a share in the SPV that holds the assets.

A strong Shariah governance system is one of the key reasons for Malaysia's successful Islamic capital market. This system ensures that all financial products, operations, and contracts are truly Islamic—not just in name, but in practice.

Every Islamic financial institution and sukuk issuer in Malaysia is required to appoint an internal Shariah committee or at least a Shariah adviser. These advisers are usually scholars with expertise in both Islamic jurisprudence and modern finance. Their duties include reviewing the product structure, examining contracts, and ensuring that all activities remain in line with Islamic law throughout the life of the sukuk.

They provide the first level of Shariah oversight, and they must give a written opinion confirming that the product is compliant. However, the final and highest authority on Shariah matters is the Shariah Advisory Council (SAC) under the Securities Commission. The SAC has the legal power to issue binding fatwas (religious rulings), and their approval is necessary before any Islamic capital market product can be offered to the public.

Together, the internal Shariah advisers and the SAC form a dual-level Shariah assurance system that helps maintain high standards of Islamic authenticity, investor trust, and regulatory consistency.

The process of sukuk issuance within the framework of Malaysia's Islamic Capital Market is governed by a highly structured and meticulously supervised system, which ensures full compliance with both Shariah principles and regulatory requirements. The lifecycle of a sukuk begins with the structuring phase, wherein the issuing entity — which may be a corporation, financial institution, or governmental body — selects an appropriate Islamic financial structure. Commonly employed structures in Malaysia include Ijarah (lease-based), Murabaha (cost-plus sale), Wakala (agency), and Musharakah (partnership). This phase involves close collaboration with legal consultants and Shariah experts to ensure that the proposed financial model is not only economically viable but also adheres to the core tenets of Islamic finance.

Following the initial structuring, the transaction undergoes an internal Shariah review conducted by the issuer's appointed Shariah adviser or Shariah Committee. This internal body is responsible for ensuring that all contractual arrangements, asset selections, and revenue mechanisms are in

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

accordance with Islamic jurisprudence. The internal Shariah adviser issues a preliminary opinion (fatwa), certifying the Shariah compliance of the proposed sukuk.

After obtaining internal approval, the sukuk structure and all accompanying documentation are submitted to the Securities Commission Malaysia (SC) for regulatory assessment. As part of this regulatory process, the Shariah Advisory Council (SAC) of the SC evaluates the submission to ensure it meets established Shariah standards. The SAC's approval is legally binding and constitutes the final level of Shariah validation. Without this approval, the sukuk cannot be offered in the Malaysian market.

A key component of the sukuk issuance process is the establishment of a Special Purpose Vehicle (SPV). The SPV is a separate legal entity created solely for the purpose of isolating financial and legal risk from the originator or issuer. It is the SPV that holds legal title to the underlying sukuk assets, issues the sukuk certificates to investors, and channels the proceeds toward financing the designated Shariah-compliant project or asset acquisition. The role of the SPV is central to ensuring that sukuk holders enjoy beneficial ownership over the underlying assets and that the transaction remains bankruptcy-remote from the issuer.

Once the SPV is formed and all documentation finalized, the sukuk must be registered with the Securities Commission. If the instruments are intended for public trading, they are also listed on Bursa Malaysia — the national stock exchange — under its Islamic segment. Bursa Malaysia maintains a dedicated platform for Islamic instruments and regularly updates the list of Shariah-compliant securities, providing a transparent and accessible trading environment for Islamic investors.

The issuance is followed by the subscription phase, during which institutional and retail investors acquire the sukuk certificates. In return, they are entitled to receive periodic profit distributions derived from the income generated by the underlying assets — such as lease payments or project returns — rather than interest payments, which are prohibited under Islamic law.

Importantly, the regulatory and Shariah compliance process does not end at issuance. Throughout the lifespan of the sukuk, continuous oversight is carried out by both the internal Shariah adviser and the Securities Commission. Issuers are required to submit periodic financial and operational reports, which are scrutinized to ensure ongoing compliance with Shariah principles and regulatory obligations. Any deviation or non-compliance must be addressed promptly and transparently.

This integrated and multilayered process ensures that sukuk instruments in Malaysia are structured, issued, and managed within a legal and ethical framework that meets both investor expectations and Islamic normative standards. Malaysia's experience demonstrates the viability of a dual regulatory system where financial innovation is balanced with religious integrity, offering a model for jurisdictions seeking to develop or enhance their own Islamic capital markets.

3.3. The Rationale for Establishing an Islamic Capital Market in Uzbekistan

The remarkable development of Malaysia's Islamic capital market over four decades presents a compelling roadmap for emerging economies like Uzbekistan. By adopting proven global frameworks and customizing them to its national context, Uzbekistan can significantly accelerate its path toward establishing a robust Islamic finance ecosystem. This transformation is not only feasible but economically essential, as the country positions itself as a potential Islamic finance hub in Central Asia, supported by its strategic location, young population, and increasing digitalization of financial services.

The formation of Uzbekistan's capital market began in the post-independence period, with a key milestone being the adoption of the Law "On Exchanges and Exchange Activities" on July 2, 1992.

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

This legal act provided the initial foundation for regulating commodity, currency, securities, and intellectual property exchanges. It laid the groundwork for the legal and institutional structure of Uzbekistan's capital market.

Subsequently, the Law "On Securities and Stock Exchanges," adopted on September 2, 1993, further defined the operational framework of the capital market, specifying the rights and obligations of market participants, and procedures for issuing and trading securities. Amendments introduced in 1996 aimed to protect shareholder rights, improve corporate governance, and enhance the investment climate.

Despite this early progress, nearly three decades later, Uzbekistan's capital market remains underdeveloped. It still lacks the capacity to effectively mobilize financial resources to support large-scale investment and sustained economic growth. One of the key reasons for this stagnation is the regulatory framework's misalignment with international standards, which deters investor confidence. For instance, the market capitalization of companies listed on the Tashkent Stock Exchange constitutes only 5.3% of GDP — significantly lower than Kazakhstan (21.7%) and Russia (34.8%), highlighting the market's limited role in the national economy[7].

Another structural challenge is the frequent reshuffling of institutions responsible for capital market regulation, creating uncertainty and undermining institutional continuity. The current Law "On the Securities Market," adopted on July 3, 2015, failed to clearly define a stable supervisory authority, merely stating that the responsible body shall be designated by the President. As a result, regulatory responsibilities have shifted between various institutions over the years. Initially handled by the Center for Coordination and Development of the Securities Market, the duties were transferred in 2019 to the Capital Market Development Agency, which was subsequently dissolved in 2021, passing its functions to the Department under the Ministry of Finance. In 2023, this role shifted once again to the National Agency for Prospective Projects, which was previously only responsible for crypto-asset regulation. Such frequent institutional changes have weakened the market's credibility and long-term policy consistency.

In addition to these challenges, the responsibilities of different actors involved in the capital market remain ambiguous. For example, the issuance of government bonds involves coordination between the Central Bank and the Ministry of Economy and Finance, while the State Assets Management Agency oversees matters related to securities of state-owned enterprises. This fragmented oversight hampers efficient market governance.

Given these issues, the establishment of a single, independent, and stable capital market regulator in Uzbekistan has become an urgent necessity. According to standards recognized by the International Organization of Securities Commissions (IOSCO), a regulator must operate independently to ensure market transparency and fairness. However, assessments by the European Bank for Reconstruction and Development (EBRD) indicate that Uzbekistan's legal framework does not guarantee regulatory independence. This divergence from international best practices underscores the importance of establishing a regulatory body modeled after institutions such as the U.S. Securities and Exchange Commission (SEC), Saudi Arabia's Capital Market Authority, or Malaysia's Securities Commission (SC).

[7] Narziyev O. S. Issues of Improving the Legal System of the Capital Market in Uzbekistan: Dissertation submitted for the degree of Doctor of Legal Sciences. – Tashkent, 2022. – P. 35.

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,

Furthermore, Uzbekistan's capital market continues to face deep-rooted obstacles, including low investor engagement, weak competition, poor linkage between the financial and real sectors, inadequate protection of investor rights, and underdeveloped stock exchange infrastructure. The absence of a long-term strategic roadmap also contributes to investor hesitancy.

To address these shortcomings, the government has recently introduced several legislative and policy measures. One of the pivotal acts is the Presidential Decree No. PF–6207 of April 13, 2021, "On Measures to Further Develop the Capital Market," approved the Capital Market Development Program for 2021–2023 and the corresponding Roadmap for 2021–2022. Among its key strategic priorities were:

Introducing more competitive and attractive financial instruments;

Facilitating easier access to the market using globally proven strategies;

Institutionalizing training programs for capital market specialists;

Diversifying the market through instruments like Exchange-Traded Funds (ETFs) and Shariah-compliant sukuk;

Expanding the application of Islamic financial products and services;

Promoting the rapid development of the corporate bond market[8].

Specifically, Clause 6 of the PF–6207 decree mandates the introduction of sukuk instruments based on Islamic finance principles. A technical cooperation agreement was signed among the Ministry of Finance, the Islamic Development Bank, and the United Nations Development Programme for the implementation of "green sukuk" initiatives. Legal amendments and consultations are being developed in collaboration with international law firms such as White & Case and Azizov & Partners.[9]

The current cornerstone of securities regulation remains the Law No.394 "On the Securities Market," which, in its current form, does not adequately accommodate Islamic financial instruments. Article 3 defines "securities" in a narrow scope — encompassing only traditional instruments like shares, bonds, promissory notes, and certificates of deposit — thus excluding sukuk. Considering the structural gaps in this legislation, developing a new comprehensive law specifically addressing capital market regulation, including Islamic instruments, may prove more effective than merely amending the existing statute.

In this light, the drafting of a new "Law on the Capital Market" under Presidential Decree No.291, led by the National Agency for Prospective Projects, is a significant achievement. Notably, Chapter 8 of the draft law is dedicated to Islamic securities. However, a legal analysis reveals that it lacks detailed mechanisms for sukuk issuance, circulation, placement, and redemption, resulting in legal uncertainty. Although Article 59 of the draft law proposes establishing a "Council on Islamic Finance Standards" to assess Shariah compliance, the council's legal status, the binding nature of its rulings, and procedural mechanisms remain undefined. For example, it is unclear whether the council's decisions will be advisory or binding, under what conditions its opinions may be challenged or annulled, or how its members will be selected and evaluated for impartiality and qualifications.

Therefore, drawing from Malaysia's experience is highly instructive. In Malaysia, the Securities Commission (SC) operates as an independent, centralized regulator, with a dedicated Shariah

Advisory Council empowered to issue binding rulings on Islamic financial instruments. Initially, Malaysia operated without centralized Shariah oversight, leading to disputes and inconsistencies. Only after establishing the Shariah Advisory Council under the authority of Bank Negara Malaysia did the sector witness accelerated, stable growth. Uzbekistan would benefit from avoiding such trial-and-error and instead implement a coherent, centralized framework from the outset

IV. CONCLUSION

The establishment of a well-regulated Islamic capital market in Uzbekistan is not only a financial innovation but a strategic imperative. While the country currently lacks a comprehensive framework for Islamic finance, its favorable demographics, growing domestic interest, and government willingness to support Shariah-compliant finance provide a strong foundation for future development. Malaysia's success offers valuable lessons for Uzbekistan, which can adopt international best practices without repeating early institutional mistakes.

Despite some recent progress, Uzbekistan's capital market still suffers from regulatory fragmentation, limited legal clarity, and the absence of a unified oversight system. The frequent institutional changes and lack of a long-term development strategy have slowed investor confidence and market performance. Moreover, Islamic financial instruments — particularly sukuk — are not yet fully recognized or regulated within the current legal system. While the draft Law "On the Capital Market" includes a chapter on Islamic securities, it fails to provide detailed mechanisms for sukuk issuance, circulation, and enforcement, leading to ongoing legal uncertainty.

In this context, Uzbekistan should take several critical steps to ensure the successful development of an Islamic capital market:

First, a two-tier Shariah compliance model should be introduced to ensure legal and regulatory stability, boost investor confidence, and reduce contradictions between different fatwas. Under this model, legal entities engaged in Islamic finance must work with independent Shariah advisors (individuals or institutions) based on contractual agreements. These advisors would be responsible for reviewing financial structures, issuing fatwas, assessing documentation, monitoring compliance, and preparing annual Shariah compliance reports. Only advisors listed and approved by the national capital market regulator should be authorized to perform these roles.

Second, a National Shariah Advisory Council should be established under the capital market regulatory authority. This Council would serve as the highest Shariah-compliance authority in Uzbekistan's financial system. Its rulings should be binding for all market participants, ensuring a consistent and unified interpretation of Islamic finance principles. Although the Council would not directly supervise individual Shariah boards, it would issue methodological guidance, interpretations, and standards, and serve as the final authority in cases of conflicting fatwas.

In addition to these reforms, Uzbekistan must also:

Establish a single, independent capital market regulator with clear legal authority and long-term stability;

Develop a comprehensive legal framework for Islamic finance that incorporates sukuk and is harmonized with international standards;

Ensure tax neutrality and legal certainty to attract both domestic and international investors;

Promote inclusive financial access and long-term investment instruments aligned with ethical and Islamic finance principles.

By taking these steps, Uzbekistan can not only diversify its financial system but also position itself as a regional hub for Islamic finance. Aligning with global trends and adapting Malaysia's

institutional model to local conditions will allow the country to build a resilient, investor-friendly Islamic capital market capable of supporting national development and economic sustainability.
