Improvement of corporate management mechanisms in oil and gas enterprises

Gafurov.Sh.N.

3rd year student of the Economics department at TDTU

Abstract: in this article, the organizational structure of oil and gas enterprises, which are among the leading sectors of the industry of the Republic of Uzbekistan, the activities of corporate management, internal and external factors affecting management, and instructions, stages and directions for improving their activities in the near future. shown.

Keywords:corporate management, tasks of management, effective management, principles of effective management, financial situation, project financing, source of financing, oil and gas enterprises, principles of effective management, general structure of management.

Introduction

In the conditions of the innovative revolution, which has manifested itself as a new stage of economic and technological development in the world, increasing the production efficiency of the oil and gas industry on the basis of innovative and digital technologies is gaining importance. According to the data of the World Bank (2020), "its share in the gross domestic product in economically developed countries reaches 60 percent, it is created due to the wide application and effective use of innovative innovations in industrial sectors." Today, according to the development trends of industrial production in the world, including the development of the oil and gas industry on the basis of effective use of resources, competitiveness, innovative and digital technologies, optimal organization of production, increasing labor productivity, and the organization of decent workplaces are considered urgent problems. .

Development (improvement) of modern technologies of production according to the established parameters based on the application of innovative technologies in industrial enterprises in the world, digital technologies, including "big data" and "artificial intelligence") based on the characteristics of the field, special attention is paid to researches in the direction of improving the methodological and programmatic bases of application. As part of the ongoing research, research in the direction of increasing the efficiency of oil and gas production necks according to a technically and technologically harmonious scheme, improving digitalization technologies at the expense of artificial intelligence, rational organization of work in the field is being carried out as a priority.

Deep reforms are being implemented in Uzbekistan, which is being modernized, in such directions as the rapid qualitative development of the industrial production network, the wide application of innovative innovations and technologies in production, and the alignment of its technical and technological level with advanced world practices. "... We need to develop the national concept of the economy of New Uzbekistan, which provides for the renewal of all sectors of the economy based on innovations. The economy of the new Uzbekistan allows to increase the gross domestic product by at least 30% and to reduce corruption sharply. Analyzes conducted by reputable international organizations confirm this...». In this regard, improvement of methodological bases of manual integration of production links, including compression compressor stations.[1] It is desirable to further

expand the scope of scientific researches in such directions as: the improvement of production efficiency, the alternative of digital infrastructures, the basis of recommendations for the future development of production according to labor productivity.

In the "Strategy of Actions" adopted by the President of the Republic of Uzbekistan Sh.M. Mirziyoyev, "...the leading branch of the national economy in the priority directions of economic liberalization and development in order to implement priority directions for modernization of our country and liberalization of all spheres of life "There is a question of increasing the competitiveness of the industrial sector at the expense of modernization and diversification", he said about the important role of the industrial sector for our republic.

Relevance of the topic

Conducted research and studies show that further deepening of structural reforms in the economy, revitalization of investment activities of enterprises, wide attraction of foreign investments, first of all foreign direct investments, and their effective use, development modernization of production, technical and technological redevelopment. A large amount of funds are allocated from the republic's budget in order to arm, create new jobs and ensure stable and rapid development of our national economy on this basis.

By reforming corporate governance, creating a favorable environment for attracting foreign direct investment to industrial enterprises, increasing the company's efficiency, introducing modern methods of corporate governance, strengthening the role of experienced leaders in corporate governance, strategic management, sustainable growth of the company's economy. should serve to provide. The need for further development of corporate governance is related to the possibility of achieving positive results with its help:

- increase the investment attractiveness of the company;
-attracting investors ready for long-term investment of financial resources;
- increase the efficiency of activity;
-reducing the cost of obtaining bank loans;
- increase the market value of the enterprise;
- facilitating access to capital markets;
-improving the company's image and reputation.

Research methodology

Various methods were used in the process of conducting research on the topic of this article. Deductive methods were used in data collection and sorting. The results obtained as a result of the research were drawn as a final conclusion through the method of induction. Statistics have been widely used to compare financial and non-financial data and obtain research results. At the same time, the relationship between corporate governance and organizational behavior was studied through the method of analysis in conducting scientific research. The synthesis method was used to calculate the generalization of the discussion.

Having tested the above methods in practice, we mention the following mechanisms as improving corporate governance in an industrial enterprise: -organizational and economic management mechanism - its important element consists in carrying out and monitoring the impact of the environment in order to maintain a stable level of stagnation;

- regulation by the state - development of this mechanism is one of the main tasks of economic regulation. It represents the system of formation of management relations based on economic and social methods of formation of state influence on various parameters of the industrial enterprise;

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

-budget-tax - regulation of direct economic management is regulation on the basis of the budget. Tax is a means of providing financial resources to cover state expenses in the ranking of corporate management in an industrial enterprise.

Literature review

In the early stages of Uzbekistan's transition to a market economy, some aspects of corporate management were studied by M. Khamidulin, I. Butikov and others. Today, the pace of scientific work and research on corporate governance is increasing significantly, and the scope of study and application is expanding. For example, I. Kurbanov, A. Obidov, Z. Ashurov, V. Kotov are working on the mechanism of modern corporate management.

In our country, the scientific sciences related to proper and effective management of industrial enterprises are experiencing stable development and change based on historical roots. During the transition to the market economy, scientific research in this field was carried out by TP Karpova, OE Nikolayeva, TV Shishkova.

In the studies of the economist A. Berlin, who conducted research on corporate management, the issues of choosing a strategy in the management of corporations and developing enterprise management, management of investment activities were studied. The research works of local economists SSGulyamov, DNRahimova, NMRasulov, MSSaidov, DX, Suyunov are aimed at creating the scientific and theoretical foundations of corporate management processes. In their scientific research, the transformation of property forms, improvement of corporate management models, issues in the process of development of joint-stock enterprises are expressed. In particular, in the researches of AAXashimov, special attention is paid to the scientific and methodological aspects of the development of management of corporate structures in the conditions of expropriation and privatization of property. RIAushev's scientific research is devoted to the problems of integrated corporate structures and management of enterprises with state participation in the capital of the founders. MBKhamidulin reflected on the development of the stock market, the role and importance of the Supervisory Board in joint-stock companies. The issues of privatization of joint-stock companies in Uzbekistan have been expressed in the scientific researches of scientists such as B. Yu. Khodiyev, BBBerkinov.

In the world, the attitude towards corporate management in industrial enterprises has increased since the 90s of the 20th century, and countries with different levels of development have begun to pay special attention to the formation of effective corporate structures in these enterprises. By this time, the principles of corporate governance were introduced, international global multinational corporations were established, corporate governance models were introduced. After all, scientists have realized that long-term stability cannot be achieved with poorly organized management in an industry with limited resources and exponentially developing technology. In particular, 3 distinct types of corporate management system are widely used in world practice: Anglo-American, German and Japanese models.

Analysis and results

In Uzbekistan, a number of changes and innovations have been made in the corporate management system of a modern industrial enterprise, which we will consider in the example of the UShK enterprise "Shortan oil and gas production".

Shurtan Oil and Gas Production Department is one of the leading production enterprises in the field of oil and gas in Uzbekistan. The company was founded in 1980 and has been engaged in gas extraction, gas, gas condensate and natural gas preparation and processing for more than 40 years.

VOLUME-5, ISSUE-6

ShoRtan Oil and Gas Production Department is one of the enterprises of state importance, a manufacturing industry giant and covers an area of 1,219 hectares. The company's products include: natural gas (26.9%), gas condensate (27.7%), liquefied natural gas (30.1%), sulfur (1.54%).

"Shortanneftgaz" UShK is considered a structural division of "Uzneftgazgazibchikarish" Joint Stock Company of "Uzbekneftgaz" ISC. The main activities of the enterprise are: oil and gas production, processing of gas extracted by JV LUKOIL-Uzbekistan Operating Company, JV "Gissarneftegaz", production of liquefied gas and elemental sulfur. release "Shortanneftegaz" UShK was the first enterprise in Uzbekistan that used the low-temperature condensate separation technology using a turboexpander. The company uses the largest gas purification device in the world. The enterprise delivers 25.2% of the Republic's gas, 20.8% of gas condensate, and approximately 23.9% of liquefied gas products. The main buyer of natural gas is "Uztransgaz" JSC. Oil extracted from oil fields and condensate after preliminary processing are sent to "Fergana Oil Refinery" UK. Private gas filling stations are the main buyers of liquefied gas products in the domestic market, besides, distribution of liquefied gas to the population is carried out through regional enterprises of JSC "Uztransgaz". "Shurtanneftgaz" UShK provides services to several organizations for gas production and processing, storage and loading, including KQ LLC "Gissarneftegaz", KQ LLC "Shurtangazmakhsulot", LLC "LUKOYL Uzbekistan Operating Company" LLC "Uz GazOil". In 2021, the company was audited according to ISO 9001 SMT and received a certificate according to this system. In order to improve the efficiency of occupational safety, industrial and fire safety management, an occupational safety and health management system based on the OHSAS 18001:1999 standard has been implemented since 2020.

In the future, the following are expected to be implemented based on investment programs:

- increasing gas production from the salt mine using the DKS-2 line;

-reducing the volume of gas going to internal outlets due to heat utilization in gas driving units;

-utilization of low-pressure gases in oil fields;

- Until May 1, 2024attract an experienced investment bank and privatize by the end of 2024 at least 49 percent of Uzbekneftgaz JSC, including through a public offering (IPO), as well as 51 percent or more of the state's share in Issiklik Elektr stansiyali JSC start work.

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-6

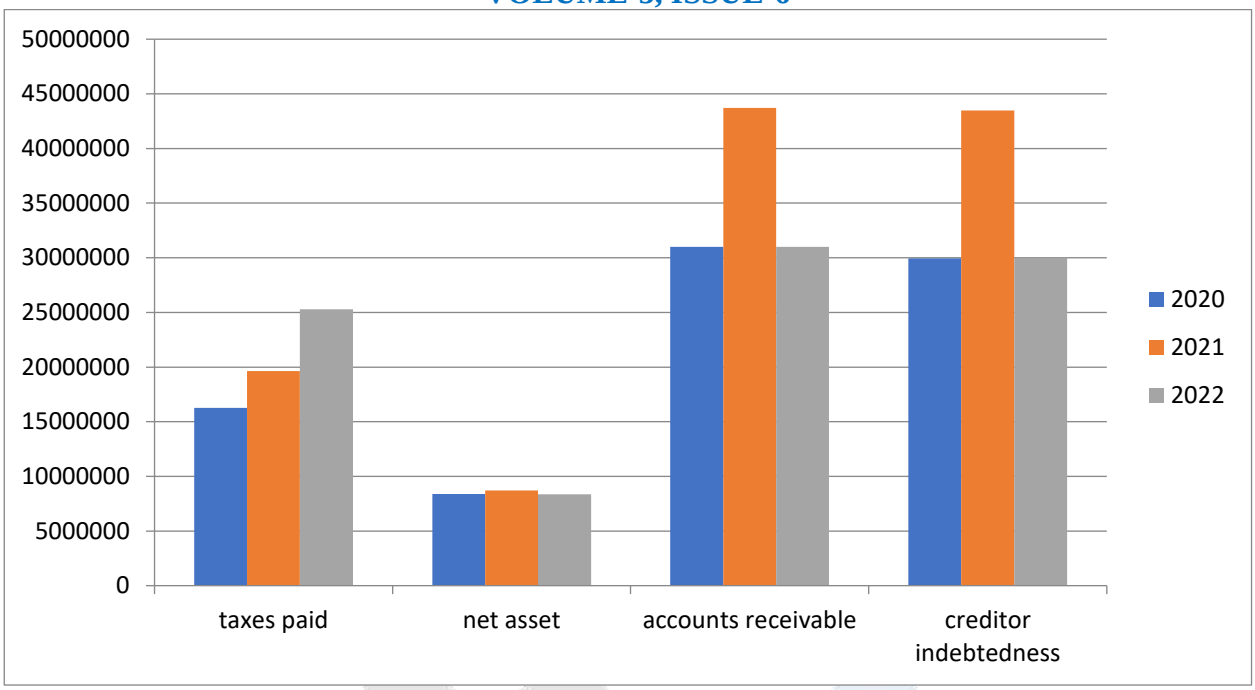

Figure 1. The financial situation of "Shurtanneftegaz" UshK in 2020-2022. in billion soums

Today, in the conditions of corporate management, there are factors that enable relatively effective implementation of modernization processes: 1. The ability to collect and mobilize large amounts of financial resources required for the implementation of modernization processes. 2. Using the internal production and technological connections of the corporate structure to gradually replace outdated equipment and technology with modern, new means of production. 3. The breadth of diversification opportunities in corporate structures with multi-stage technological processes of finished product production. 4. Supplying production with modern techniques and technologies and financing scientific laboratories and experimental design works that create new types of management methods and the breadth of possibilities to ensure their activities, etc. Also, the wide possibilities of corporate organization and management of economic activities allow to model inter-firm relations based on the use of the advantages of corporations, using many options for their formation.

As can be seen from the information below, the economic decline observed all over the world during the severe pandemic did not leave the enterprises of Uzbekistan behind. "Shortanneftegaz" UshK was able to return its results after COVID-2019, that is, we can say that it achieved these results quickly due to the efficient organization of production and corporate. According to him, the return on assets kept its almost constant value (0.5). While the value of capital and profit achieved the greatest growth in 2021 (19.9 billion soums and 16 billion soums), according to the data of the end of 2022, they are in deficit compared to last year. was

Conclusions and suggestions

Thus, the studied international experience, as well as the procedure decided in practice, determine the need to fundamentally reform the management system of industrial enterprises, especially oil and gas enterprises, and provide them with the necessary funds. The correction of these deficiencies and the introduction of new methods in the corporate management system of the industrial enterprise will increase the level of legal protection of the republic's shareholders participating in the management, in particular, the minority shareholders, and allow their legal interests to be taken into account more effectively in the implementation of the activities of the management bodies of the joint-stock companies. The advantage of the "advanced experience of corporate management" of the Organization for Economic Cooperation and Development in most countries is that they are included in various codes and recommendations and do not have the status of a legal-normative document. In this case, the mechanisms of compliance of these standards (recommendations) based on the rule "disclose information about compliance or explain the reasons for non-compliance" (comply or explain) are used.

In order to ensure the effective functioning of many enterprises with a corporate management system operating in our republic, specific measures should be established to improve the corporate management system and increase the management responsibility of the joint-stock company. In this context, it is appropriate to implement the following suggestions:

- improvement of the legal base of the Republic of Uzbekistan in the field of corporate management, development of measures to improve the activities of corporate structures;
- Establishing the introduction of the position of corporate consultant in enterprises, which is still new for the corporate management system of the Republic of Uzbekistan. This position is an employee who ensures regular and effective communication between the owners of the joint-stock company, its executive body and the supervisory board;
- wide promotion of the concept of corporate behavior within corporate management structures, and by means of this, increasing the efficiency of the enterprise;

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

- ensuring the level of openness of information in the management process of the joint-stock company, as well as regular reporting of the management bodies of the joint-stock company to shareholders or shareholders;
- to ensure the effective implementation of management information systems development strategies in the activities of corporate structures;
- to achieve efficiency in production by introducing the matrix management system of the product life cycle into the practice of corporate structures engaged in high-level service and product production.

Thus, it can be concluded from our analysis that sufficient conditions have been created in Uzbekistan for the effective functioning of the corporate management system by oil and gas enterprises that fully comply with the principles of IXXT, as well as for the effective implementation of corporate management. However, we have identified some weaknesses in Uzbekistan's corporate governance, where some of the global principles of corporate governance are partially implemented or not implemented at all. Taking this into account, we have developed recommendations and suggestions, and we believe that additional measures for further improvement should be implemented.
