METHODS OF SPEECH DEVELOPMENT OF PRESCHOOL CHILDREN

Jumasheva Gulnara Khamidullaevna

Professor, Head of the Department of Preschool Education NSPI named after Ajiniyaz

Annotation:

This paper explores effective methods for developing speech in preschool children. It discusses the importance of early language development for cognitive, emotional, and social growth. The study highlights various techniques such as storytelling, role-playing, interactive games, and conversations that stimulate vocabulary acquisition, pronunciation, and sentence structure. The role of educators and parents in creating a rich linguistic environment is emphasized. The paper also outlines practical recommendations for integrating speech development activities into daily preschool routines.

Key words:

Preschool children, speech development, early childhood education, language skills, communication, vocabulary building, interactive methods, storytelling, role-play, parental involvement

Introduction:

The most important stage of speech acquisition corresponds to preschool age. Timely and properly organized direct-emotional communication of a preschool child with adults is of crucial importance in determining how the child will begin to understand the speech of adults, when he will begin to speak actively and at what rate his speech will develop in the future. Education is a process of purposeful formation of personality. One of the most important goals of these teachers and students is the formation of a person who is useful to society (1).

The child's interaction with fiction in the organization of preschool education ensures the implementation of his aesthetic, cognitive, social and speech development capabilities. However, it is necessary to take into account the aesthetic features of the activity, the child's capabilities should not be limited to imitation. For this purpose, the teacher-educator should use the following methods. The artistic worth of a literary work, such as the expressiveness of poetry or the unexpected narrative development in a story, should be taken into consideration by preschool educational groups. Creating an emotionally rich performance space for the child to perform a literary work or a work of his own imagination is the goal of speaking activities (group retelling, individual expressive reading, and dialogic reading with adults). However, a piece of art can be described not only in words but also by showcasing its unique positive aspects through collaborative efforts between teachers and students, musical interpretation, action, photographs, and constructive models.

Material and methods:

The following elements are included in logorhythmic exercises: articulatory gymnastics, vocal-articulation exercises thatstrengthen the muscles of the organs of articulation, develop their mobility and develop singing data, tongue-twisters for automating and differentiating sounds, phonopedic exercises, the purpose of which is to correct sound pronunciation, strengthen the larynx and instill speech skills breathing, exercises for the development of facial muscles, communication games and dances through which the development of the emotional sphere, associative-figurative thinking, expressiveness of non-verbal means of communication, positive

self-perception, musical and musical-rhythmic games with musical instruments, finger gymnastics and poems accompanied by movement hands contribute to the development of fine motor skills, fluency and expressiveness of speech, speech hearing and speech memory, exercises for the development of general motor skills, corresponding to the age characteristics of children, aimed at developing development of the muscular-motor and coordination sphere, exercises for the development of word creation, aimed at expanding the active vocabulary of children and developing a sense of rhythm (2).

Speech development in children plays a key role in their overall development and success in school and social life. Here are some important aspects that help in speech development in children.
Early involvement: From a very early age, parents and loved ones should actively interact with the child, talking to him and reading children's books.
Concrete examples: when teaching new words or concepts, it is important to give the child concrete examples and explanations to connect abstract ideas with real objects and situations.
Combination of speaking and listening: It is important to teach children not only to speak actively but also to be good listeners. Ask them questions that give them the opportunity to express their thoughts and provide active communication in various situations (3).

Rules for improvement children’s speech:
The first rule: the ability to perceive speech in the native language depends on the training of the muscles of the child's speech organs (therefore, it is important to pay sufficient attention to the training of the speech organs in order to improve the pronunciation of words, phrases and sentences).
The second rule: Understanding the meaning of speech depends on the acquisition of lexical and grammatical rules of speech by the child.
The third rule: Mastering the expressiveness of speech depends on the child's tendency to understand the expressive means of phonetics, lexicon and grammar (it is necessary to teach older children to understand the expressiveness of speech and achieve the mastery of this feeling by the child).
The fourth rule: Enrichment of speech depends, first of all, on improving speech skills (if the formation of the speech of an older preschool child was successful at the previous age stage, then the process of enriching speech and mastering it will be easier and faster). In addition, according to the researchers, the speed of speech enrichment depends on the development of language perception, cognitive abilities (sensing, memory, perception, thinking), willpower.
The fifth rule: The acquisition of speech norms depends on the development of language perception. In learning children's speech, it is important to form the habit of using punctuation marks and the ability to remember. It has already been proven in the science of native language methodology that the period of a person's life, mainly before school, is effective in the traditional use of elements of the native language in standard speech.
Didactic principles in terms of speech development:
- to understand the speech material for training the organs of speech and the hand;
- understanding the importance of speech and developing lexical and grammatical skills;
- assessment of expressiveness of speech. For this, it is appropriate to choose didactic material that develops certain emotions in older children of preschool age;
- the principle of developing a feeling of love for the mother tongue (this involves the

VOLUME-5, ISSUE-8

organization of education for children, in particular, on the acquisition of the tradition of using the facts of the mother tongue in speech

- comparing written speech on a specific topic with oral speech;
- gradual enrichment of speech.

A high level of speech development of children of preschool age can be achieved thanks to the following:

- awareness of the literary standards and rules of the language;
- to be able to express one's opinions freely;
- ability to communicate, deal with adults and peers;
- to be able to listen to the interlocutor, to ask (ask a question correctly), to answer, to object, and if necessary to explain and explain. It is necessary to pay special attention to the development of dialogical and monologic speech in the development of the speech of children of preschool age (4).

Results and discussion:

Speech development in preschool children is a critical component of their overall development. During the early years, children rapidly acquire language skills that form the foundation for future learning, communication, and social interaction. This study has shown that the use of interactive and engaging methods—such as storytelling, role-play, and language games—can significantly enhance children's speech abilities.

Storytelling not only enriches vocabulary but also helps children understand sentence structure and improve their listening skills. Role-playing allows children to practice dialogue, express emotions, and use language in context, making it an effective tool for developing both receptive and expressive language skills. Interactive games make learning fun and help maintain children's attention, which is crucial for consistent progress.

Another important factor discussed is the role of adults—teachers and parents—in speech development. Children benefit greatly from a language-rich environment where adults actively engage them in meaningful conversations, encourage them to ask questions, and provide constructive feedback. Creating such an environment at home and in the classroom fosters not only language development but also confidence and curiosity.

However, it is important to recognize that each child develops at their own pace. Therefore, speech development methods should be flexible and adapted to meet individual needs. Teachers and caregivers should be attentive to signs of speech delays and provide early intervention when necessary.

Conclusion:

Overall, the discussion emphasizes that effective speech development in preschool children requires a combination of structured methods, active adult participation, and an environment that encourages communication and learning
