Issues of arousing interest in music of preschool children

Ibragimova Lizakhan Avezovna
Associate professor of the Preschool Education Department NSPI named after Ajiniyaz

Annotation:
This article explores the key issues related to arousing interest in music among preschool children. Music plays a crucial role in the emotional, cognitive, and social development of young children. However, effectively engaging preschoolers in musical activities requires age-appropriate methods, creative teaching strategies, and an understanding of child psychology. The study highlights the importance of integrating music into early childhood education to enhance learning motivation, creativity, and communication skills. Challenges such as lack of resources, insufficient teacher training, and limited parental involvement are also discussed. Recommendations are made for creating a stimulating musical environment that fosters curiosity and enjoyment in music.
Key words: Preschool children, music education, early childhood development, musical interest, creative teaching, child psychology, learning motivation.

Introduction:

Music is the only art that penetrates deep into the human heart and has the power to express that passion. So, it is true that music has a worthy place in the upbringing of a generation worthy of our ancestors, and it is a great responsibility for us, the future cadres, to do the honorable work of aesthetic upbringing of the child.Music is an aesthetic education that should become an integral part of the great work being done to harmoniously educate people in a democratic society. Musical work with children is especially important. From an early age, children develop a desire to perceive, feel, understand the beauty of life and art, and the desire to create such beauty increases. It develops artistic and creative abilities. Music and aesthetic education should be an integral part of the great work being done to harmoniously educate people in a democratic society. Musical work with children is especially important. It is impossible to achieve full results without music promotion. Musical education in children should begin at an early age. Music evokes strong emotions in a child. With the help of music, his artistic perception grows and his feelings are enriched. Itis impossible to cultivate all-round physical, spiritual and other qualities in children without developing their musical understanding and giving them enough interest in music (1). These include listening, singing, musical rhythmic movements, and children's performance and creativity in the process of playing musical instruments. One of the main priorities of the National Training Program is to establish interdisciplinary links. Music is an art form. Music is closely related to other arts. Music education begins in preschool, not school, as in other disciplines, and continues in all aspects of the education system.

Ensuring continuity in children's musical development:

-coordinating musical and aesthetic activities with time and space; -considering the unique characteristics of music as an art;

-taking responsibility for children's musical education, irrespective of their aptitudes and capacities.

Material and methods:

Preschool education plays an important role in the system of continuing education. Today, the importance of preschool education plays an important role as a prelude to continuing education. Therefore, the importance of teaching each subject separately is growing. The main task of every subject in preschool education is to teach children to think and reason. The Importance of the Art of Music Music is an art form that unites people through their experiences and emotional feelings. The language of music is understandable and close to everyone. That is why the music of all nations is attractive (1). Through sound, music reflects thoughts and feelings, and describes the moral issues that have plagued humanity at different stages of life. It also reflects the philosophical nature of music. Great musical works are imbued with a deep philosophical content, and the music reflects issues such as life and death,personality and society, goodness and oppression, power and weakness.

Tasks of Music Education:

1.Develop a love and interest in music.

2. Enrichment of children's musical experience (based on musical works).

3.To acquaint children with simple musical concepts, to develop skills in listening to music, singing, musical rhythmics.

4.Formation of emotional feelings in children. They have a sense of fret, a sense of rhythm, and a sense of movement.

5.Develop a musical taste (based on musical impressions).

6.Develop creativity in children (based on all activities).

The main focus in early child- hood is not musical skills and abil- ities. It is rather about getting to know music as something that al- lows children to experience quality time through music, which again opens for personal development and wellbeing (2).

The same is true for music learning, although it usually (fortunately not always) starts at the age of 5 or 6. In view of the studies on children’s de- velopment, research on the impact of music and remarkable examples implemented in Europe, it is becom- ing increasingly clear that music education for very young children is a major issue (2).

Developing musical capabilities stimulates other fields of development because of the many intersections between musical activities and general aspects:

> The comprehension of musical structures and playing with musical components requires a cognitive perfor- mance.

> The musical representation of emotional content can help to broaden the spectrum of expression and feeling.

> Playing on instruments will always involve skilful motor- ic handling.

Children learn music and dif- ferent sounds based on what they have heard. Their singing ability cannot develop unless they hear singing. Thus, it is im- portant for children that their parents sing and interact with them whatever their singing skills are:

it includes a lot of repetition

- it offers time to hear and perceive

the words

- we sing by using syllables
- pronunciation in singing is exaggerated
- listening to various songs increases knowledge of vocabulary (2).

Early childhood education refers to programs appropriate for children's ages from birth to eight years old. These programs range from private facilities such as childcare centre, pre-primary schools, nursery schools to public school programs (3).

Reduction in music programming is one part of the larger problem but the effect extends deeper. The signal being communicated to teachers at the early childhood level by policymakers is that music is not as important as some other aspects related to early learning, particularly those in what could be termed 'academic' areas of kindergarten (4).

Results and discussion: The essential unity of all components, the shape of the work, is represented by the language of music. The material manifestation of musical content is called form. Music serves as a medium for the audience to experience the composer's ideas, emotions, and creativity. Thus, learning the "language" of music, comprehending its meaning, and appreciating the depth of concepts, emotions, and experiences it offers is made possible by music. The significance of music instruction for the younger generation was stressed by ancient philosophers. Childhood is the time when a future member of society develops their human and good traits. It was during this time that music started to be used to cultivate virtues.

Conclusion:

Fostering an interest in music among preschool children is a vital aspect of their holistic development. Music not only supports emotional and cognitive growth but also enhances social interaction and self-expression. To successfully engage young learners, educators must adopt developmentally appropriate teaching methods that stimulate curiosity and enjoyment. Additionally, the active involvement of parents and the provision of adequate resources play a significant role in cultivating a positive musical environment. Addressing challenges such as limited teacher training and lack of materials is essential for creating meaningful musical experiences. By prioritizing music education in early childhood settings, we can lay a strong foundation for lifelong appreciation and understanding of music.
