SOCIAL ADAPTATION OF CHILDREN TO PRESCHOOL EDUCATIONAL ORGANIZATIONS

Akhmedova Gulrukh Rustam kizi
Faculty of Preschool Education,
Turebekova Guljakhan Adilbekovna
Senior Lecturer, PhD of the Department of Preschool Education NSPI named after Ajiniyaz

Annotation: This article explores the process of social adaptation of children to preschool educational organizations, emphasizing its significance for their emotional, cognitive, and communicative development. The study examines key factors influencing adaptation, such as family involvement, peer interactions, teacher-child relationships, and the educational environment. Special attention is given to the role of play-based learning and gradual integration strategies in fostering a smooth transition from home to preschool. The findings highlight the importance of creating a supportive and inclusive atmosphere that meets children's individual needs, promotes positive socialization, and lays a strong foundation for future academic success.
Key words: social adaptation, preschool education, children's development, early childhood, teacher-child interaction, play-based learning, socialization, inclusive education

INTRODUCTION:

Social adaptation in a group of peers presupposes the child's inclusion in a complex system of relationships, which requires him to rebuild his
behavior and activity structure. A clear daily routine, certain responsibilities and requirements come as a surprise to the child, which causes stress.
Lack of preliminary preparation for visiting preschool institutions can cause a number of reactions of a neurotic nature in a child: emotional disturbances, development of a feeling of fear of kindergarten, deterioration of appetite, sleep disturbances, and increased incidence of diseases.
Social and psychological adaptation in children occurs differently and depends on age, type of higher nervous activity, health status, characteristics of family upbringing and relationships between its members, contact, goodwill, level of development of gaming skills, emotional dependence on the mother (1).

Material and methods:

A social teacher (social-pedagogical service) should have the art of managing social-pedagogical cooperation, the ability to identify the most important jobs and the range of important problems that can be solved in the joint work of specialists. Social-pedagogical cooperation-a special form of communication between the participants of the educational process. The educational process provides mutual enrichment of the intellectual, emotional and active spheres of the participants; coordinating and harmonizing them. Socio- pedagogical cooperation means clear distribution of functions, mutual delegation, compliance with the rights and obligations of the interacting parties (7).
The main factors influencing a child's adaptation in a preschool educational institution (1):
1. Low level of socialization of the child. It will often be much easier for a child who has had repeated experience of being separated from his mother for at least a few hours, to be in contact with peers and other adults, to get used to it than for one who is mostly at home under parental care

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

around the clock.

2. Underestimating the importance of the adaptation mode. Often, a parent, contrary to all the norms and recommendations of teaching staff, leaves the child for the whole day. Conventionally, a gradual increase in stay time starting from two hours can be considered the norm, but there is no single recipe; for each child you need to select your own regime, based on what is possible.

3. Low self-care skills of the child or their complete absence. Contrary to the opinion of many parents, by the age of three, a child is already able to do a lot on his own, naturally we are not talking about tying shoelaces and fastening buttons on clothes. But a child is quite capable of using some cutlery, such as a spoon, or wearing tights and a T-shirt. And of course, a child who has not been taught self-care will experience difficulties, even to the point of decreased self- esteem and the emergence of complexes.

Formation of the child's personality, his social life correct and consistent approach to the problems of the entrance is important in the social adjustment of the child is enough. Social adaptation is a child's entry into a peer group (social group), existing in society acceptance of norms, rules of conduct, adaptation to living conditions, self- awareness and role behavior, self-management, self-care, adequate with others relationships are formed. Social adaptation is a broader and meaningful concept of "socialization" is a condition of formation. Socialization is the process and result of a child's assimilation of social experience. As a result of socialization, the child becomes a cultured, educated person (2).

Social adaptation is significantly hampered by factors such as: • social incompetence;

• emotional inadequacy;

• unsocialized aggression;

• resistance to the educational and educational process;

• Poorly developed or absent skills for behavior in unfamiliar places;

• lack of experience communicating with other children and unfamiliar adults.

One of the most important tasks of preschool education is to prepare children for school education by developing and forming their initial knowledge and skills about the socio-cultural norms and customs of the family, society and the state in accordance with the state standard. While researching the socialization of preschool children, we witness that their relationships with family members and adults are also important in their formation. Appropriate use of thematic conversations, problem situations, games, theater, and social folk tales in teaching preschool children social and cultural values is important in achieving the goal. It is clear that the most convenient and effective period for perfecting social and spiritual values and mental- intellectual development in a person is the pre-school period (4).

One of the challenges facing the nursery teacher is to reduce the level of anxiety in children during the adaptation period and to create positive conditions for them during the stay in kindergarten (3). An effective way to relieve stress in children is a game during which children can establish relationships with each other and gain experience in communication. But at the preschool age, children experience difficulties in organizing games. As usual, active children who have gaming skills become the organizers of the games, but passive, closed children stay aside and they only watch the games of their peers. Therefore, at this stage the assistance of an adult is required in order engage the children in mutual games.

In recent years, as a result of the acceleration of the pace of social life, there has been a need to prepare preschool children for the process of social relations, which is complex in content,

multifaceted and based on internal competition, taking into account the physiological and psychological characteristics of children of preschool age (3).

Results and discussion: Supervision of the activities of medical personnel is entrusted to local health authorities. The pre-school educational organization provides a room for the medical worker and creates the necessary conditions for his work. Employees of the preschool education organization in the state receive free medical examinations at health authorities, the expenses for which are determined within the funds allocated by the state. The procedure for organizing the protection of children's life and health in preschool educational organizations is determined by the Ministry of Preschool Education of the Republic of Uzbekistan together with the Ministry of Health (5).

In addition to basic educational programs, additional paid educational services are provided, taking into account the needs of the family, on the basis of agreements concluded with parents or their substitutes for the fulfillment of the goals and tasks stated in the charter of the preschool educational organization. have the right to show. Paid educational services cannot be provided within the framework of the main educational activity financed by the founder(6).

Conclusion: The process of social adaptation to preschool educational organizations plays a critical role in shaping children's early experiences and future learning potential. Successful adaptation depends on a combination of supportive family involvement, positive peer relationships, and nurturing teacher guidance within a well-structured and inclusive environment. When children feel emotionally secure and socially accepted, they are more likely to develop essential communication skills, self-confidence, and a willingness to engage in learning activities. Therefore, preschool institutions must prioritize strategies that address individual needs, encourage active participation, and promote positive socialization, ensuring that every child's transition from home to school is smooth and developmentally enriching.
