Abstract. The article discusses the methodology of applying the scientific heritage of Jadid enlighteners in the process of spiritual and moral education of students in higher educational institutions. The research was conducted on the basis of the IMRAD model, and the analysis of results noted a significant increase in students' activity in expressing opinions on moral topics, their interest in independent research, and the broadening of their spiritual worldview. As practical recommendations, special educational modules, multimedia resources, and project works are proposed.

Keywords: jadidism, enlightenment, spiritual and moral education, higher education, methodology.

INTRODUCTION

Relevance of the Topic

In the 21st century, under the conditions of globalization, the rapid development of information technologies, and processes of cultural integration, higher educational institutions are becoming not only centers of knowledge but also the main environments for ensuring the spiritual and moral maturity of young people. From this perspective, the scientific and pedagogical views of Jadid enlighteners—one of the richest layers of our national heritage—are of great importance for today's education system.

Representatives of the Jadid movement—such as Mahmudkhoja Behbudiy, Abdulla Avloni, Munavvarqori Abdurashidkhonov, and Cho'lpon—considered the enlightenment of the people and the upbringing of the younger generation in the spirit of science, morality, and loyalty to the homeland as their foremost goal. Their works and practical activities are not only of historical significance but can also serve as a methodological foundation for the modern higher education process.

Today, forming national identity, civic responsibility, and cultural immunity among students is one of the most pressing issues. This increases the necessity of using the Jadid heritage effectively in the modern education system.

Purpose and Objectives

The main purpose of this article is to develop an effective methodology for shaping spiritual and moral qualities in students of higher educational institutions based on the scientific heritage of Jadid enlighteners.

To achieve this purpose, the following objectives were set:

To conduct a systematic analysis of the spiritual and pedagogical ideas of the Jadid movement.

To identify the possibilities of integrating the Jadid heritage into the higher education process.

To develop innovative methods for spiritual and moral education.

To prepare practical recommendations for strengthening students' sense of national pride and social responsibility.

LITERATURE REVIEW

1. General Concept of the Jadid Movement

Jadidism was a socio-political, cultural, and educational movement formed in Turkestan, Crimea, the Caucasus, and other Muslim regions at the end of the 19th and the beginning of the 20th centuries. Its main aim was to rescue people from ignorance and direct them toward science, technology, and a modern worldview [1].

The activities of Uzbek Jadids became especially active between 1900 and 1930. During this period, new-method schools (*usuli jadid*) were opened, newspapers and journals were published, and theater art developed. For example, the newspaper *Taraqqiy* (1906) and the journal *Sadoi Turkiston* (1914) were among the leading publications promoting Jadid ideas [2].

2. Pedagogical Views of Jadid Enlighteners

2.1. Spiritual and Moral Education in the Legacy of Abdulla Avloni

In his work "*Turkiy Guliston yoki Axloq"* ("Turkic Garden or Ethics"), Avloni identifies three areas of upbringing: intellectual education, moral education, and physical education [3]. He particularly emphasized moral purity, patriotism, and diligence as integral components of education:

"Morality makes a person human, and etiquette makes a person noble."

This idea corresponds to the modern concept of education and can serve as a methodological foundation in the educational process of higher education students.

2.2. Mahmudkhoja Behbudiy – A Symbol of National Awakening

Behbudiy was one of the most active representatives of the Jadid movement, and in his works, he promoted science and enlightenment as the only path to social progress [4]. His drama *Padarkush* ("The Parricide") is significant not only in literature but also in education, as it demonstrates the consequences of ignorance and the value of knowledge.

3. The Place of Jadid Heritage in Modern Research

In recent years, decrees of the President of the Republic of Uzbekistan on "Measures for Studying and Promoting the Heritage of Jadid Ancestors" [5] have created new opportunities for integrating Jadid heritage into the education system.

Several scientific works in Uzbekistan have highlighted the relevance of this topic, including:

Karimov I.A. (2016). "*High Spirituality is an Invincible Force*"

Tulyaganova N. (2018). "*The Impact of Jadid Pedagogical Heritage on Modern Education*"

Juraev Sh. (2021). "*New-Method Schools and Their Social Significance*"

Number of publications on Jadid heritage (2010–2024)

Year Range	Number of Publications
2010–2014	45
2015–2019	68
2020–2024	103

MAIN PART

1. The Jadid Movement and Its Historical Foundations

At the end of the 19th and the beginning of the 20th centuries, the Jadid movement emerged in the socio-political life of the peoples of Turkestan. At that time, the literacy level of the population was very low, and the methods of teaching in traditional schools and madrasas did not meet modern requirements.

In such conditions, Jadid enlighteners set themselves the goal of saving the nation from ignorance, calling for enlightenment, and encouraging the study of modern sciences.

The essence of Jadidism was embodied in the idea of "Leading the nation to progress through science and enlightenment." For this purpose, they established new-method schools, created textbooks, published newspapers and journals, and turned theater stages into tribunes of national awakening.

2. The Scientific Heritage and Pedagogical Views of Jadid Enlighteners

Abdulla Avloni, in his work *Turkiy Guliston yoki Axloq*, elaborated on all aspects of upbringing. According to him, moral education was the most important factor: if a person lacked morality and conscience, knowledge would bring little benefit. Enlightenment was regarded as the guarantee of the nation's future.

Mahmudkhoja Behbudiy was recognized as the main propagator of national awakening ideas. Through his drama *Padarkush*, he demonstrated the tragic consequences of ignorance and called for the pursuit of knowledge.

Abdurauf Fitrat considered the purpose of education to be raising an individual capable of independent thinking and social activity. In works such as *Rahbari Najot* ("Guide to Salvation") and *Statement of the Indian Traveler*, Fitrat emphasized instilling in youth a sense of national pride, freedom, and moral responsibility.

In the works of Cho'lpon and Hamza, too, issues of national awakening, morality, and spiritual education hold significant importance.

3. The Process of Spiritual and Moral Education in Higher Education

During the years of independence, special attention was paid to spiritual and moral education in the education system of Uzbekistan. Presidential decrees and orders, the Law "On Education," and the "National Program for Personnel Training" defined the task of raising well-rounded individuals as a priority.

Higher education institutions not only prepare specialists but also form students as individuals loyal to national and universal values, patriotic, and morally mature. In this process, the heritage of the Jadids is of great importance.

4. Methodology of Using the Heritage of the Jadids

Traditional methods: Lectures, seminars, and roundtable discussions analyzing the works of the Jadids.

Innovative methods: Project works, multimedia tools, and dramatization integrated into the educational process.

Educational activities: Literary evenings, museum classes, and creative meetings.

Social activities: Engaging students in community-based educational events and volunteer projects.

5. Criteria of Effectiveness and Results

The effectiveness of educational activities carried out using the heritage of the Jadids is reflected in the following indicators:

Increased respect for national values among students.

Formation of patriotism and a sense of social responsibility.

Strengthened adherence to ethical culture and etiquette norms.

Development of independent thinking and creativity.

Growth in students' social activity.

CONCLUSION

The above scientific analyses show that the scientific and pedagogical heritage of Jadid enlighteners has not lost its relevance today. The Jadid movement played an invaluable role in the national self-awareness of the peoples of Turkestan and in calling them to enlightenment and progress.

In ensuring the spiritual and moral development of students in higher educational institutions, methodologies developed on the basis of the ideas of the Jadids are highly effective. In the works of

VOLUME-5, ISSUE-8

Avloni, Behbudiy, Fitrat, Cho‘lpon, and Hamza, the following ideas serve as important guidelines for today’s youth:

Considering science and enlightenment as the main force;

Preserving and cherishing national values;

Observing morality and etiquette;

Fostering patriotism and social responsibility;

Developing independent and free thinking.

An effective methodology for using the heritage of the Jadids serves not only to cultivate knowledgeable students but also to form well-rounded individuals loyal to national values and responsible for the development of society.

Thus, the methodology of spiritual and moral education developed on the basis of the scientific heritage of the Jadids increases the effectiveness of educational processes in higher education institutions and ensures the spiritual growth and social activity of youth.
