THE SIGNIFICANCE OF ELECTRONIC EDUCATIONAL-METHODICAL RESOURCES IN THE FORMATION OF HISTORICAL THINKING

MUHAMMADIYEV JAVLON HAYITBOYEVICH
Independent Researcher, Chirchiq State Pedagogical University

Abstract: *The article analyzes the role of electronic educational-methodical resources such as electronic textbooks, virtual museums, interactive maps, multimedia platforms, and gamification in the development of historical thinking. It argues that through such resources, students develop skills in deeply comprehending historical events, analyzing sources, and drawing independent conclusions. In particular, the opportunities offered by platforms such as Smithsonian Learning Lab, Europeana, ZiyoNET, and EduMarket are demonstrated to enhance the quality of education, motivation, and analytical thinking, both scientifically and practically.*

Keywords: *historical thinking, electronic educational resources, digital education, virtual museum, gamification, Smithsonian Learning Lab, Europeana, ZiyoNET, EduMarket.*

ELEKTRON O‘QUV-METODIK RESURSLARNING TARIXIY TAFAKKURNI SHAKLLANTIRISHDAGI AHAMIYATI

MUHAMMADIYEV JAVLON HAYITBOYEVICH
Chirchiq davlat pedagogika universiteti mustaqil izlanuvchisi

Annotatsiya: *Maqolada elektron darsliklar, virtual muzeylar, interaktiv xaritalar, multimedia platformalari va gamifikatsiya kabi elektron o‘quv-metodik resurslarning tarixiy tafakkurni shakllantirishdagi roli tahlil qilinadi. Ushbu resurslar orqali o‘quvchilar tarixiy voqealarni chuqur anglash, manbalarni tahlil qilish va mustaqil xulosalar chiqarish ko‘nikmalarini rivojlantirishi asoslanadi. Xususan, Smithsonian Learning Lab, Europeana, ZiyoNET va EduMarket kabi platformalarning ta’lim sifati, motivatsiya va tahliliy tafakkurni ilmiy hamda amaliy jihatdan rivojlantirishdagi imkoniyatlari tahlil etiladi.*

Kalit so‘zlar: *tarixiy tafakkur, elektron o‘quv resurslari, raqamli ta’lim, virtual muzey, gamifikatsiya, Smithsonian Learning Lab, Europeana, ZiyoNET, EduMarket.*

ЗНАЧЕНИЕ ЭЛЕКТРОННЫХ УЧЕБНО-МЕТОДИЧЕСКИХ РЕСУРСОВ В ФОРМИРОВАНИИ ИСТОРИЧЕСКОГО МЫШЛЕНИЯ

МУХАММАДИЕВ ЖАВЛОН ХАЙИТБОЕВИЧ
Независимый исследователь, Чирчикский государственный педагогический университет

Аннотация: *В статье анализируется роль электронных учебно-методических ресурсов, таких как электронные учебники, виртуальные музеи, интерактивные карты, мультимедийные платформы и геймификация, в формировании исторического мышления. Подчеркивается, что благодаря данным ресурсам учащиеся развивают навыки глубокого понимания исторических событий, анализа источников и самостоятельного формулирования выводов. В частности, демонстрируются возможности таких платформ, как Smithsonian Learning Lab, Europeana, ZiyoNET и EduMarket, по повышению качества образования, мотивации и аналитического мышления как с научной, так и с практической точки зрения.*

Introduction. In the 21st century, digital technologies are fundamentally transforming the field of education. Digital innovations enrich learning and create opportunities to improve quality, content, and inclusivity. In history education in particular, instead of mere memorization, it is essential to cultivate historical thinking — the ability to identify cause-and-effect relationships between events, critically evaluate historical sources, and substantiate one's own conclusions. The concept of historical thinking is directed towards a 'deep understanding of the past' and includes several components: determining historical significance, using primary sources, recognizing continuity and change, analyzing cause-and-effect relationships, considering historical perspectives, and understanding historical ethical dimensions. The pedagogical integration of digital resources creates new opportunities for developing historical thinking skills.

Within the framework of the "Digital Uzbekistan – 2030" strategy, electronic platforms are being widely introduced into education. For example, through ZiyoNET and EduMarket, students can work with online textbooks, audiobooks, interactive tests, and virtual museums. Global resources such as Google Arts & Culture also help in analyzing historical works and documents. In the process of developing historical thinking, such platforms provide learners with opportunities to independently search for information, compare sources, and connect data to its context.

Literature Review. In recent years, the effectiveness of electronic educational-methodical resources (EEMR) in the development of historical thinking has been substantiated in a number of academic studies. Martinez-Hita, Go'mez-Carrasco, and Miralles-Martinez (2021) showed that a project based on gamification significantly improved the academic performance of primary school students. They emphasized that such an approach not only consolidates knowledge but also enhances learners' motivation and engagement. Mercan, Varol Selçuk, and O'zkan Keskin (2023), through a meta-analysis, examined the positive impact of virtual museums on students' cognitive development, demonstrating that visual and interactive tools enable a more emotional and profound comprehension of historical data. Similarly, Utkugun (2022), in a study conducted with pre-service teachers, noted that classes organized in virtual environments yield more effective results in shaping historical concepts compared to traditional methods.

As a theoretical foundation, the 'Historical Thinking Concepts' model developed by the Centre for the Study of Historical Consciousness (n.d.) is noteworthy. This model systematically explains the key components of historical thinking: identifying historical significance, analyzing continuity and change, understanding cause-and-effect relationships, and evaluating historical perspectives. In practice, the Smithsonian Learning Lab (n.d.) provides the opportunity to study historical materials in context through hundreds of thousands of digitized sources, while the Europeana portal (Wuyts, 2024) offers access to over 50 million cultural objects, enabling learners to conduct comparative analyses of historical events across different sources.

At the national level, UNESCO (2024) and UNESCO Uzbekistan (2025) reports highlight the opportunities for using electronic platforms in Uzbekistan, stressing the need to strengthen digital educational infrastructure, create quality content, and develop teachers' digital competencies.

Main Part. Electronic educational-methodical resources (EEMR) are not merely electronic versions of traditional textbooks, but products that incorporate interactive, visual, and multimedia elements.

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

Through such resources, students can observe and analyze historical events in realistic contexts. The main characteristics of EEMRs include the following:

• Didactic systematicity: electronic textbooks and platforms organize content into a logical system, ensuring step-by-step learning.

• Interactivity and gamification: the introduction of game elements (points, titles, challenge tasks) into the learning process increases student motivation. For example, students' interest rises as they achieve various ranks and track their accomplishments.

• Visualization: interactive maps, 3D models, and videos bring historical information to life. For instance, students can trace geographical changes in the past using interactive maps, thereby linking events to context more easily.

• Individualization: digital platforms are adaptive to the learner's level, enabling each student to work at their own pace.

• Interdisciplinary integration: EEMRs often combine history, culture, art, and geography, thereby enriching content.

The stages of developing historical thinking include: (1) receiving information; (2) analyzing it; (3) comparing similarities and differences; (4) drawing independent conclusions. EEMRs play a vital role in shaping this process. For example, electronic libraries such as the Smithsonian Learning Lab, which contain collections of primary historical sources, allow students to examine original documents and draw conclusions based on evidence.

Historical thinking skills also encompass determining the significance of historical realities, substantiating sources, identifying continuity and change, understanding cause-and-effect relationships, considering historical perspectives, and evaluating moral issues. Electronic resources support the development of these skills. For instance, digital presentations, virtual museum collections, and interactive tests created by teachers encourage analytical thinking; learners can revisit the studied material and strengthen the basis of their conclusions.

Gamification and Motivation. Gamification (the integration of game elements into lessons) increases learner participation and makes history classes more engaging. Modern studies indicate that gamified approaches not only enliven the learning process but also improve students' performance. For example, in an experiment conducted within the Spanish education system, students in classes organized through gamification achieved significantly higher results compared to those taught with traditional methods (as measured in assessment indicators). These interactive project participants scored considerably higher on many test items. Other studies also confirm that gamification, regardless of entertainment value, increases student motivation and attention in the learning process.

Virtual Museums and Multimedia Resources. Virtual museums not only provide remote access to exhibits but also improve learners' cognitive outcomes. Research shows that teaching activities conducted with the support of virtual museums and excursions in the social sciences enhance students' cognitive and emotional abilities. For example, lessons incorporating virtual tours have been shown to yield positive outcomes: students gained a deeper understanding of historical concepts, retained information better, and were more motivated (with researchers highlighting the role of excitement and attention in the learning process). Virtual museums also create an environment for lively study of exhibits through game elements and interactive animations, which fosters creativity and problem-solving skills in students.

International Platforms. Global online resources designed for studying historical sources are of great significance. For instance, the Smithsonian Learning Lab contains millions of images,

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

documents, videos, and audio recordings, which teachers extensively use to prepare interactive lessons. Working with these materials helps learners analyze within historical contexts, interpret facts, and develop deeper understanding. The Europeana portal provides access to collections from thousands of European cultural institutions, housing more than 50 million cultural objects (including paintings, documents, and photographs). Through Europeana, students can search for materials on specific historical topics and study them in relation to historical events. This allows, for example, the gathering and analysis of data on a single event from multiple national archives.

National Experience. In Uzbekistan, the integration of electronic resources into history education is being implemented step by step. The 'ZiyoNET' platform and the 'EduMarket' portal provide students with access to electronic textbooks, video lectures, interactive tests, and virtual museum collections. According to research, classes using electronic textbooks demonstrate higher levels of independent inquiry skills and historical thinking than traditional classrooms. Furthermore, the multi-dimensional audiovisual materials on these platforms increase students' interest in lessons.

Technological Infrastructure and the Teacher's Role. For the effective implementation of EEMRs, schools must be equipped with modern information and communication technologies and stable internet connections. UNESCO experts particularly emphasize the importance of enhancing teachers' digital competencies. For instance, within a UNESCO educational project, international expert Wendy Gorton conducted seminars in Uzbekistan on developing teachers' digital skills and introducing modern teaching methods. During these sessions, teachers learned the use of digital tools, and professional development courses were organized at higher education institutions. Thus, the readiness of teachers to work with technology and their ability to create quality content are vital for the effective use of EEMRs.

International studies demonstrate that electronic educational resources serve as a solid foundation for significantly improving the quality of education. For example, the use of virtual resources and large-scale cultural heritage databases enriches learners' historical awareness, strengthens analytical thinking, and encourages creativity. At the same time, it is noted that without proper technical and methodological preparation, the effectiveness of such resources can be limited.

Conclusion. At present, electronic educational-methodical resources play an invaluable role in the educational process. Research shows that with their help, students not only memorize historical facts but also develop the ability to understand cause-and-effect relationships of events, properly evaluate historical contexts, and independently analyze socio-cultural processes. Moreover, interactive tests, video lectures, virtual museums, and gamification elements significantly increase student motivation. For example, studies show that lessons enriched with game elements improve students' learning outcomes considerably more than traditional methods.

When the methodological and pedagogical opportunities of EEMRs are fully utilized, the quality of historical education can be substantially enhanced. Integrating modern technologies into pedagogy fosters analytical thinking, creativity, and independent research skills in learners. Therefore, future strategies should prioritize strengthening the digital educational infrastructure in schools, creating quality interactive content, and improving teachers' digital literacy. These measures will modernize history education and further develop students' critical thinking and cognitive potential.
