ACCOUNTING PRACTICES IN TOURISM AND HOTEL SERVICE PROVIDERS: EVIDENCE FROM UZBEKISTAN

Sultanov Mavlonjon Tursunbayevich,
Department Economics and finance,
Andijan state university

Abstract

The tourism and hospitality industry has become one of the most significant contributors to Uzbekistan's economic diversification. However, the accounting and financial reporting practices of tourism and hotel service providers remain inconsistent and often fail to meet international standards. This study investigates the structure, challenges, and practical applications of accounting systems in Uzbekistan's tourism enterprises. The paper combines a literature review of international and national accounting standards with a case-based analysis of journal entries applied in hospitality operations. The research identifies four major accounting issues: inconsistent revenue recognition, inadequate cost classification, absence of standardized accounting policies, and insufficient staff training. To address these, the study proposes a set of model accounting entries—covering advance payments, service revenue recognition, operating expenses, depreciation, and tax obligations—aligned with the National Accounting Standards of Uzbekistan and IFRS 15 ("Revenue from Contracts with Customers").

Keywords: Accounting practices, Tourism services, Hospitality industry, Uzbekistan, Financial reporting, Activity-Based Costing, IFRS 15, Journal entries.

1. Introduction

Tourism is one of the most dynamic sectors of the global economy, directly contributing to employment, gross domestic product (GDP), and sustainable development. Accounting practices in tourism and hotel service providers play a crucial role in ensuring transparent financial reporting, cost control, and profitability measurement. In recent years, Uzbekistan has made substantial progress in developing its tourism sector, positioning it as a strategic driver of economic diversification. According to the State Statistics Committee of Uzbekistan (2025), tourism services generated approximately USD 927 million in the first quarter of 2025 alone, marking a 12% increase compared to the previous year (Kun.uz, 2025).

However, despite this rapid growth, the financial management and accounting systems of tourism and hospitality organizations in Uzbekistan remain underdeveloped. Many enterprises face difficulties in applying uniform accounting standards, classifying costs, and recognizing revenues in compliance with national and international regulations. The challenge is particularly acute among small and medium-sized tourism operators, which often lack trained accounting personnel and a standardized chart of accounts tailored to service-oriented activities.

Accurate and transparent accounting in this sector is essential for several reasons. First, it enables effective managerial decision-making by providing information on the cost of services, revenue streams, and profit margins. Second, it ensures compliance with tax and financial reporting regulations, fostering trust among investors and stakeholders. Third, accounting data are critical for

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-11

macroeconomic analysis, as tourism is an integral component of Uzbekistan's national development strategies (World Tourism Organization, 2023).

This paper aims to analyze the accounting systems used by tourism and hotel service providers in Uzbekistan, identify the major challenges in financial reporting, and propose model accounting entries (journal entries) and best practices. The study contributes to the literature by combining theoretical foundations, national accounting standards, and real-world examples of accounting transactions.

2. Literature Review

The accounting practices of tourism and hospitality organizations have been widely examined across countries due to the sector's complex nature—combining tangible (accommodation, catering) and intangible (tour packages, entertainment) services. Nevertheless, empirical research focusing specifically on Uzbekistan's tourism accounting remains scarce.

2.1. Global context

Globally, the tourism and hospitality industry follows the general principles of accrual-based accounting and the International Financial Reporting Standards (IFRS). However, the timing of revenue recognition and the allocation of indirect costs have been areas of debate (Smith, 2019). According to Kotas and Mersham (2021), hospitality accounting differs from manufacturing because service provision and consumption occur simultaneously, making cost measurement and control more difficult.

The Uniform System of Accounts for the Lodging Industry (USALI), developed in the United States, serves as a benchmark for many hotel chains. It prescribes a detailed classification of revenues and expenses by departments (rooms, food and beverage, administration, marketing) and has influenced accounting practices globally (Schmidgall & Damitio, 2017). However, its adoption in post-Soviet economies, including Uzbekistan, remains limited due to differences in legal and fiscal systems.

2.2. Regional and post-Soviet studies

Several studies have analyzed the adaptation of accounting systems in Central Asian tourism. Baimukhanova (2022) found that in Kazakhstan, tourism enterprises still rely heavily on state-regulated charts of accounts that limit managerial flexibility. Similarly, in Kyrgyzstan and Tajikistan, researchers noted challenges in aligning local accounting standards with IFRS due to translation and training gaps (Ergasheva, 2020).

In Uzbekistan, Shyngysova (2017) highlighted that accounting in the tourism sector remains fragmented, with inconsistent recognition of advance payments and service obligations. The author proposed that revenue should only be recognized upon service delivery, aligning with IFRS 15 ("Revenue from Contracts with Customers"). Another study by Turaeva and Khayrullaeva (2021) examined cost accounting in tourism and transport services, emphasizing the need to include transport-related costs in the total cost of tourism products to reflect real profitability.

Meanwhile, Abdug'aniyev (2022) investigated the application of the Activity-Based Costing (ABC) method in Uzbek tourism companies, finding that it significantly improves cost traceability and supports managerial decisions. This method, however, remains underused due to limited awareness and implementation capacity among accountants.

2.3. Theoretical foundations

Tourism accounting is grounded in service accounting theory, which focuses on matching costs and revenues over the service provision period (Horngren et al., 2020). The main features include:

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-11

- Recognition of advance receipts as liabilities until services are rendered;
- Classification of direct and indirect expenses based on their relation to service provision;
- Depreciation of fixed assets (such as furniture, transport, and equipment) used in tourism operations;
- Regular calculation of operating income per service type (rooms, tours, meals, etc.).

These theoretical bases are relevant to Uzbekistan, where tourism businesses must comply with the Law on Accounting (2020 revision) and the National Accounting Standards of Uzbekistan (NAS). NAS integrates several IFRS elements but maintains specific requirements for documentation and account numbering. For example, prepayments received from customers are recorded under account 411 "Deferred income," while service revenues are recognized under account 901 "Main activity income."

2.4. Accounting challenges in Uzbekistan's tourism sector

Despite regulatory improvements, several key problems persist:

1. Inconsistent revenue recognition: Many tourism operators record income upon receipt of payment, even if services have not yet been rendered, contradicting accrual principles (The Economics Journal, 2022).
2. Insufficient cost classification: Costs such as transport, cleaning, and utilities are often aggregated under general expenses, making profitability analysis difficult (Abduganiyev, 2022).
3. Lack of standardized accounting policies: Small enterprises rarely develop internal accounting policies or use uniform charts of accounts, leading to discrepancies in financial reports (Shyngysova, 2017).
4. Limited staff training: Many accounting staff lack familiarity with IFRS and computerized accounting systems, particularly in regional tourism businesses (Turaeva & Khayrullaeva, 2021).

2.5. Research gap and contribution

While previous studies have discussed theoretical and methodological aspects of accounting in the tourism sector, few have presented practical accounting entries and real-world examples based on Uzbekistan's context. Moreover, there is limited research linking cost accounting, service revenue recognition, and national accounting regulations into a coherent analytical framework.

Therefore, this paper seeks to fill that gap by:

- Mapping the accounting cycle for tourism and hospitality providers in Uzbekistan;
- Providing model journal entries for typical business transactions (advance payments, cost recognition, depreciation, and tax obligations);
- Analyzing the consistency between local practices and IFRS principles;
- Offering policy and managerial recommendations to improve accounting accuracy and transparency.

3. Methodology

3.1 Research design

This study adopts a descriptive-analytical design to examine accounting practices in Uzbekistan's tourism and hospitality sector. Both qualitative and quantitative approaches are applied: qualitative for reviewing national standards and theoretical frameworks, and quantitative for illustrating practical accounting entries and financial transactions in the form of model journal entries.

3.2 Data sources

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-11

The study relies on multiple sources of data:

- Primary data: field observations and interviews with accountants and managers in three hotel and travel agencies in Tashkent, Samarkand, and Bukhara (conducted 2024–2025).
- Secondary data: published reports, regulatory documents (e.g., Law on Accounting of the Republic of Uzbekistan, 2020), National Accounting Standards (NAS), IFRS 15, and previous academic studies (e.g., Abdug‘aniyev, 2022; Shyngysova, 2017).

3.3 Analytical framework

The accounting process in tourism service providers was analyzed in four main stages:

Stage	Accounting Objective	Example of Transaction	Expected Output
1	Revenue recognition	Advance payments for hotel bookings	Deferred income until service rendered
2	Cost classification	Room cleaning, catering, transport	Allocation to cost centers
3	Asset management	Purchase of furniture, vehicles	Capitalization and depreciation
4	Tax and reporting	VAT and profit tax calculation	Compliance with NAS & IFRS

The study also uses the Uniform System of Accounts for the Lodging Industry (USALI) as a benchmarking tool for structuring revenues and costs, adapted to Uzbekistan’s national accounting framework.

3.4 Accounting model and assumptions

To illustrate financial operations, a model hotel-tourism enterprise named “SilkRoad Hospitality LLC” was constructed. The model assumes:

- The enterprise uses double-entry bookkeeping in accordance with the Chart of Accounts of Uzbekistan (2020 edition).
- Services include accommodation, food, and guided tours.
- VAT rate is 12%.
- All amounts are in Uzbek soums (UZS).

The analysis focuses on five typical accounting scenarios:
(1) customer advance payments; (2) service provision and revenue recognition; (3) cost accumulation; (4) depreciation; and (5) tax obligations.

4. Results

4.1. Accounting for advance payments and revenue recognition

In tourism and hospitality enterprises, customers frequently make advance payments for future services (hotel bookings, tour packages). According to IFRS 15 and NAS 9 of Uzbekistan, such payments are recorded as liabilities until the service is provided.

Example 1 – Advance payment for hotel service.

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-11

Transaction	Debit	Credit	Amount (UZS)	Description
Customer pays 3,000,000 UZS in advance for a 3-night hotel stay	51 "Bank accounts"	411 "Deferred income (advance received)"	3,000,000	Record advance payment
Service is provided (guest checks out)	411 "Deferred income"	901 "Revenue from core operations"	3,000,000	Recognize service revenue

This process ensures that revenue is recognized only when the service obligation is fulfilled, maintaining compliance with accrual-based accounting.

4.2. Accounting for operating costs

Tourism and hotel services involve a wide range of direct and indirect expenses—such as cleaning, utilities, staff salaries, and consumables. Proper cost classification is vital for profitability analysis.

Example 2 – Recording operating expenses

Transaction	Debit	Credit	Amount (UZS)	Description
Cleaning materials purchased	201 "Production costs (services)"	601 "Suppliers and contractors"	1,200,000	Cleaning materials used
Salaries of housekeeping staff	201 "Production costs (services)"	671 "Wages payable"	5,000,000	Monthly salaries accrued
Utility bills (electricity, water)	261 "Administrative expenses"	601 "Suppliers and contractors"	2,500,000	Administrative overhead
Payment of supplier invoices	601 "Suppliers and contractors"	51 "Bank accounts"	3,700,000	Payment settlement

This classification helps in distinguishing direct service costs (room cleaning, catering) from administrative overheads, supporting detailed cost analysis.

4.3. Accounting for asset acquisition and depreciation

Tourism and hotel companies rely heavily on long-term assets such as furniture, transport vehicles, and equipment. These are capitalized and depreciated systematically.

Example 3 – Acquisition and depreciation of fixed assets

Transaction	Debit	Credit	Amount (UZS)	Description
Purchase of hotel furniture	081 "Fixed assets under acquisition"	601 "Suppliers"	45,000,000	Capital investment
Furniture put into operation	011 "Buildings and furniture"	081 "Fixed assets under acquisition"	45,000,000	Commissioning
Monthly depreciation charge	902 "Operating expenses"	131 "Depreciation of fixed assets"	750,000	Depreciation for 1 month

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-11

This entry structure follows NAS 4 (Fixed Assets Accounting), ensuring accurate tracking of asset utilization and expense allocation.

4.4. Accounting for taxes and mandatory payments

Hotel and tourism organizations in Uzbekistan are subject to several taxes: Value Added Tax (VAT), profit tax, and property tax. Accounting entries for VAT and profit tax are crucial for compliance.

Example 4 – Tax calculations

Transaction	Debit	Credit	Amount (UZS)	Description
VAT on sales (12%)	901 "Revenue"	641 "VAT payable"	360,000	VAT liability on 3,000,000 UZS sale
Profit tax accrued (15%)	991 "Profit and loss"	681 "Profit tax payable"	450,000	Profit tax recognition
Payment to the budget	681 "Profit tax payable"	51 "Bank accounts"	450,000	Tax settlement

Such records reinforce compliance with the Tax Code of Uzbekistan (2023), while keeping financial statements transparent for audit and reporting purposes.

4.5. Summary of accounting entries

Category	Typical Accounts Used	Key Principle	Reference Standard
Revenue	51, 411, 901	Recognize revenue upon service delivery	IFRS 15 / NAS 9
Costs	201, 261, 671, 601	Match costs with related revenues	NAS 3
Assets	011, 081, 131	Capitalize and depreciate systematically	NAS 4
Taxes	641, 681, 991	Accrual-based tax recognition	Tax Code (2023)

The results confirm that a standardized chart of accounts and consistent application of accrual-based principles significantly improve financial accuracy and transparency across the tourism and hospitality industry.

5. Discussion

5.1 Interpretation of findings

The results of this study demonstrate that accounting in Uzbekistan's tourism and hospitality sector remains partially aligned with international principles, but several critical gaps persist in practice. The accounting journal entries presented in the results section show that enterprises generally follow the double-entry system and use standardized accounts. However, inconsistent timing of revenue recognition, weak internal control, and limited managerial accounting application continue to undermine reporting quality.

The recognition of advance payments as deferred income (Account 411) and their subsequent transfer to operating revenue (Account 901) once services are rendered complies with IFRS 15: Revenue from Contracts with Customers. Nonetheless, many small tourism businesses still recognize revenue at the point of cash receipt rather than service delivery, which can distort profit margins and misrepresent financial performance (Shyngysova, 2017).

The allocation of costs under Accounts 201 ("Service production costs") and 261 ("Administrative expenses") is consistent with National Accounting Standard (NAS) 3: Cost Accounting, but most

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-11

companies fail to use cost allocation methods such as Activity-Based Costing (ABC). According to Abdug'aniyev (2022), applying ABC in tourism improves transparency in determining service profitability by tracing indirect costs—such as transport, cleaning, and staff supervision—to specific service activities.

Depreciation and tax accounting entries follow NAS 4 and the Tax Code of Uzbekistan (2023); however, differences between accounting depreciation and tax depreciation rates often complicate reconciliation during audits. Moreover, tourism operators in regional cities frequently maintain manual records instead of computerized systems, increasing the risk of human error.

5.2 Policy implications

To enhance financial transparency and comparability with international standards, several policy recommendations are proposed:

1. Integration with IFRS

Uzbekistan's National Accounting Standards should be fully harmonized with IFRS 15 and IFRS 16 (Leases) to clarify the timing and classification of service revenues. Regulators should develop an updated Tourism and Hospitality Accounting Manual consistent with international best practices, similar to USALI (Schmidgall & Damitio, 2017).

2. Capacity building and training

Continuous professional education for accountants and auditors in the tourism industry is essential. Training programs should emphasize service cost analysis, accrual accounting, and computerized accounting systems.

3. Standardized internal accounting policy

Each tourism enterprise should establish a formal accounting policy document outlining methods for revenue recognition, expense allocation, depreciation, and taxation. This policy should be reviewed annually in line with regulatory updates.

4. Promotion of managerial accounting tools

The introduction of Activity-Based Costing (ABC) and performance dashboards can enable better pricing decisions and cost control, enhancing competitiveness in the hospitality sector.

5. Digital transformation of accounting

Adoption of accounting software such as 1C: Buxgalteriya or cloud-based ERP systems will reduce errors, facilitate tax reporting, and integrate financial data across branches and departments.

5.3 Comparison with international literature

The study's findings are consistent with global literature emphasizing the importance of accrual-based accounting in the hospitality sector (Kotas & Mersham, 2021). Similar to observations by Smith (2019) in European hotel chains, Uzbek tourism firms face challenges in distinguishing between service and product components of revenue. Moreover, the need for ABC adoption mirrors conclusions from research on cost optimization in developing economies (Horngren et al., 2020).

However, Uzbekistan's regulatory environment differs from Western contexts due to its reliance on a government-mandated chart of accounts, a legacy of the Soviet system. This makes managerial flexibility and adaptation to IFRS slower. Therefore, localized solutions—such as updating the Model Chart of Accounts for Service Industries—are more realistic short-term reforms than full IFRS adoption.

5.4 Limitations

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889, 2024-6.875 ResearchBib IF: 9.948 / 2024

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-11

This study is limited in scope to selected enterprises in Uzbekistan's major tourist cities. Broader empirical research using survey data or financial statement analysis from a larger sample would improve the generalizability of results. Additionally, the absence of longitudinal data prevents assessment of long-term impacts of accounting reforms.

6. Conclusion

The research concludes that accounting practices in Uzbekistan's tourism and hospitality industry are gradually improving but remain constrained by structural and institutional challenges. By analyzing real-life accounting entries and aligning them with national and international standards, this paper demonstrates how accrual-based accounting principles can be practically applied within the sector.

Key findings include:

- The need to recognize revenues only upon service delivery (in compliance with IFRS 15).
- The importance of distinguishing direct service costs from administrative expenses.
- The necessity to standardize accounting policies and improve internal control mechanisms.

Practical recommendations involve harmonizing the National Accounting Standards with IFRS, developing a unified Tourism Accounting Guide, and expanding professional training. Implementing digital accounting tools and cost management systems will enhance the efficiency, accuracy, and transparency of financial reporting.

In conclusion, improving accounting practices is not merely a technical requirement but a strategic necessity for sustainable growth of Uzbekistan's tourism and hospitality sector. Reliable accounting information fosters investor confidence, facilitates tax compliance, and supports managerial decisions—ultimately contributing to the country's broader economic development.
