NATION-SPECIFIC MEANINGS OF HORIZONTAL METAPHORS IN THE UZBEK LANGUAGE

Yoqubova Mohistara Ibrohimjon qizi
2nd-year Master's student in Linguistics,
University of Natural and Social Sciences

Annotation: This article investigates the nation-specific meanings of horizontal orientation metaphors in the Uzbek language from a cognitive-cultural perspective. The study demonstrates how spatial oppositions such as right–left, front–back and center–periphery metaphorically structure social order, moral evaluation, and interpersonal relations in Uzbek worldview. By analyzing idiomatic expressions, proverbs, and cultural practices, the research reveals that horizontal spatiality functions as a conceptual model reflecting respect, legitimacy, power, marginality, and social status. These metaphorical mappings are shaped by historical traditions, religious norms, and ethnolinguistic values.

Keywords : horizontal metaphors, spatial cognition, Uzbek language, national mentality, right–left symbolism.

НАЦИОНАЛЬНО-СПЕЦИФИЧЕСКИЕ ЗНАЧЕНИЯ ГОРИЗОНТАЛЬНЫХ МЕТАФОР В УЗБЕКСКОМ ЯЗЫКЕ

Аннотация:В данной статье исследуются национально-специфические значения горизонтальных ориентационных метафор в узбекском языке с позиции когнитивно-культурного подхода. Анализируются концептуальные функции пространственных оппозиций, таких как право–лево, перед–зад и центр–периферия, в выражении социального порядка, моральных оценок и межличностных отношений. Выявлено, что историческая память, религиозные традиции и культурные ценности узбекского народа находят отражение в этих пространственных метафорах.

Ключевые слова: горизонтальные метафоры, пространственное мышление, узбекский язык, национальный менталитет, лингвокультура

INTRODUCTION

Spatial cognition plays a crucial role in structuring human thought and experience, and among its core components, horizontal orientation demonstrates a particularly rich potential for metaphorical conceptualization. In cognitive linguistics, spatial metaphors are not merely stylistic devices but fundamental mechanisms through which cultures organize abstract concepts via concrete spatial experience. Horizontal metaphors — typically expressed through oppositions such as right–left, near–far, east–west — serve as a powerful cognitive tool that allows speakers to evaluate and categorize social relations, moral judgments, cultural values, and identity. Although the basic bodily experience of horizontal space is universal, the symbolic interpretation of horizontal directions is profoundly shaped by cultural norms, historical traditions, and collective worldview. This makes the horizontal metaphor system a fertile field for revealing nation-specific mental representations.

The Uzbek language, rooted in the rich cultural heritage of Central Asia, provides an illustrative example of how horizontal spatiality becomes intertwined with national consciousness. The symbolic meanings attributed to the directions "right" (o'ng) and "left" (chap) in Uzbek culture demonstrate a strong socio-cultural asymmetry. "Right" is conventionally associated with respect, correctness, prestige, and positive social behavior, while "left" frequently evokes notions of marginality,

disrespect, or disapproval. These associations are evident in idiomatic expressions, ritual practices, kinship structures, and politeness strategies. Similarly, the cultural interpretations of "front–back," "center–periphery," and geographical orientations such as "east–west" are closely connected with traditional cosmology, hierarchical worldview, and historical interactions with neighboring civilizations.

Despite the centrality of such metaphors in shaping Uzbek national mentality, horizontal orientation remains an underexplored area in contemporary cognitive linguistic research, which has primarily focused on vertical metaphors of status, morality, and power. A systematic investigation of horizontal metaphors can therefore contribute to a deeper understanding of how Uzbek speakers construct social boundaries, conceptualize interpersonal relations, and preserve cultural values through language. The nation-specific meanings encoded in these spatial metaphors reveal the cognitive mechanisms through which identity and worldview are transmitted across generations.

LITERATURE REVIEW AND METHODOLOGY

The study of spatial metaphors within cognitive linguistics has been significantly shaped by seminal works such as Lakoff and Johnson's Conceptual Metaphor Theory (CMT), which argues that human cognition is grounded in embodied experience. According to this framework, spatial orientations provide fundamental source domains that structure abstract mental concepts. While vertical metaphors such as UP–DOWN have received ample scholarly attention for their role in encoding evaluation, morality, and social hierarchy, horizontal metaphors remain comparatively understudied. Kovecses (2005) emphasizes that spatial metaphors are strongly conditioned by cultural models and socio-cognitive practices, resulting in distinct nation-specific metaphorical systems even when they derive from universal bodily experience.

Research on Central Asian languages within cognitive linguistics is still in its developmental stage. Studies dealing with Uzbek metaphor systems have predominantly focused on conceptual metaphors related to emotion, time, and social status (Abdullaeva, 2019, Toirova, 2021). Although several scholars have addressed spatial cognition in Turkic cultures, their attention has primarily been directed toward sacred verticality rather than horizontal conceptualizations such as right–left or center–periphery oppositions. Therefore, a lacuna remains concerning how horizontal space is mentally structured and culturally interpreted in Uzbek national thought.

Cross-cultural research has demonstrated that horizontal orientation often carries strong symbolic polarization. For instance, in many cultures "right" is associated with legitimacy and power, whereas "left" symbolizes deviance or inferiority. Studies in anthropology and gesture research highlight that such asymmetries are rooted not only in physical handedness but also in religious and social traditions. However, these findings cannot be uniformly applied to all linguistic communities, as symbolic spatial values are shaped by unique historical narratives and cultural contexts. Hence, a nation-specific approach is essential for examining how Uzbek speakers conceptualize horizontal space as part of their cultural identity.

This research adopts a qualitative cognitive-linguistic methodology, integrating elements of conceptual analysis, cultural semantics, and ethnographic observation. The primary aim is to identify and interpret metaphorical patterns that reveal the culturally grounded meanings of horizontal orientation in the Uzbek language.

Linguistic data were collected from multiple sources to ensure representativeness:

- Uzbek proverbs, idiomatic expressions, and stable collocations depicting spatial concepts
- Dialogic speech and pragmatic formulas from everyday communication

- Written corpora, including literary works, media discourse, and folklore texts
- Ethnographic descriptions of cultural rituals and behavioral norms related to spatial directionality

Through this methodology, the study not only documents the metaphorical uses of horizontal orientation in the Uzbek language but also exposes the deep cognitive mechanisms that preserve national identity and transmit cultural values through linguistic practice.

RESULTS AND DISCUSSION

The analysis conducted in this study demonstrates that horizontal orientation in the Uzbek language functions as a highly productive metaphorical system, deeply embedded in cultural, historical, and social cognition. The collected linguistic and ethnographic data reveal that horizontal directions — primarily expressed through right–left, front–back, and center–periphery oppositions — encode a wide range of nation-specific values. These spatial metaphors are not merely lexical conventions but operate as cognitive frameworks through which Uzbek speakers organize social relations, moral judgments, and collective identity.

One of the most salient patterns found in the data relates to the metaphorical asymmetry between right (o‘ng) and left (chap). In Uzbek culture, the right side symbolizes honor, social approval, and correctness. Expressions such as o‘ng qo‘l odam, o‘ng yo‘lga tushmoq, o‘ng tomonda joylashmoq all imply legitimacy, dignity, or success. In contrast, the left side metaphorically represents deviation, misbehavior, or disrespect: chapga yo‘lmoq, chap odam, chap ish denote socially unacceptable or morally inferior actions. These mappings align with cultural practices such as seating arrangements at gatherings, entering a sacred place with the right foot, or addressing respected individuals positioned on one’s right side.

Another recurring metaphorical pattern relates to front (old) and back (orqa) orientations. The front direction symbolizes social recognition, progress, and leadership. Lexical units such as oldinga yurmoq, oldinda turmoq, old nafasi bor construct success as a movement towards the front — a visible and prestigious location within social space. Conversely, orqaga qolmoq, orqa safda turmoq metaphorically index marginality, regression, or lack of agency. This spatial conceptualization aligns with collective experiences derived from war formations, public ceremonies, and hierarchical customs in which prominent individuals occupy leading positions.

Importantly, the metaphor FRONT = POWER / BACK = MARGINALITY is not absolute. In domestic settings, culturally valued figures such as elders or guests may be positioned behind to signify protection or respect rather than inferiority. This demonstrates the context-sensitive nature of horizontal metaphors and highlights that spatial conceptualization is dynamically integrated with social norms.

A further conceptual schema identified in the analysis concerns center–periphery metaphors. Throughout Uzbek linguistic usage, the center represents authority, cultural dominance, and social unity, whereas peripheral zones are associated with isolation or weakness. Idiomatic usages like markazda turmoq, markaziy o‘rin tutmoq portray centrality as a source of influence and prestige. Conversely, chekkada qolmoq and chekka hudud express remoteness both geographically and socially.

Historically, Central Asian nomadic cosmology viewed the center as the point of cosmic balance, while periphery symbolized vulnerability. In modern discourse, these spatial metaphors extend to political and economic interpretations: the capital city as the central power and rural or border regions as peripheral, less privileged spaces. Thus, the metaphor CENTER = SOCIAL

POWER / PERIPHERY = SOCIAL WEAKNESS constitutes a conceptual continuation of ancient cultural beliefs adapted to contemporary realities.

The results also confirm that horizontal metaphors are culturally sustained through ritual behavior, greeting etiquette, and kinship positioning. These metaphors persist not because they are linguistically ingrained, but because they continue to be enacted in real-life social practices. In this sense, language both reflects and reinforces cultural cognition.

The nation-specific meanings embedded in horizontal metaphors confirm that spatial cognition in Uzbek culture is not universal but culturally motivated. While bodily experience provides the foundation for spatial metaphors, their symbolic interpretations arise from historical memory, religious teachings, and socio-cultural traditions. Therefore, horizontal orientation should be understood not merely as a physical dimension but as a cognitive-cultural model deeply intertwined with national identity.

CONCLUSION

The findings of this research demonstrate that horizontal orientation in the Uzbek language constitutes a culturally rich and cognitively significant metaphorical system. Unlike purely descriptive spatial references, horizontal metaphors actively participate in shaping social reasoning and cultural identity. By mapping concrete spatial directions such as right–left, front–back, and center–periphery onto abstract domains of morality, social hierarchy, and interpersonal relations, Uzbek speakers express deeply rooted values and worldviews embedded in their historical and cultural memory.

The metaphorical polarization of right and left reveals a strong cultural evaluation mechanism: the right side functions as a symbol of legitimacy, honor, and social acceptance, whereas the left side indexes disapproval, marginality, and behavioral deviation. Similarly, front–back metaphors conceptualize progress and visibility versus regression and neglect, reflecting the societal emphasis on active participation and leadership. The center–periphery schema, derived from ancient cosmological models and reinforced by contemporary socio-political structures, illustrates the close association between geographical centrality and institutional power.

These conceptual patterns indicate that Uzbek spatial metaphors are not arbitrary linguistic choices but coherent mental models informed by cultural practices such as hospitality norms, religious etiquette, and ceremonial positioning. Their persistence across generations suggests that metaphor functions as a cognitive mechanism for preserving and transmitting collective identity. Horizontal orientation, therefore, acts as a symbolic map through which speakers evaluate the social world and define their place within it.
