Keywords: creative pedagogy, aesthetic education, creative activity, educational effectiveness, aesthetic taste, pedagogical innovation, student personality development, integration of art and education.

Abstract: This article discusses the issues of increasing the effectiveness of aesthetic education in students through the use of creative pedagogical activity in the educational process. The study analyzes the role of aesthetic education in personal development, the pedagogical possibilities of a creative approach, and the educational significance of lessons organized on the basis of creative activity. It also shows ways to use innovative pedagogical methods to form aesthetic taste, creative thinking, and beauty perception skills in students. The results of the article are significant in that they provide practical recommendations for educators in the effective organization of aesthetic education.

INTRODUCTION:

In today's conditions of globalization and informatization, the education system is faced with the task of educating not only knowledgeable, but also spiritually mature, aesthetically inclined, and creative individuals. The development of society, the development of the cultural environment, and the preservation of national values directly depend on the aesthetic education of the younger generation. Therefore, the issue of aesthetic education is considered one of the priority areas of modern pedagogy. Aesthetic education forms in students the skills to feel beauty, to understand and evaluate art and natural phenomena, and to treat aesthetic values with respect. This process is of great importance in ensuring the spiritual and moral development of the individual. In particular, the creative potential of students can be developed through the effective organization of aesthetic education in secondary schools and higher educational institutions.

Modern educational practice shows that traditional pedagogical approaches cannot fully reveal all the possibilities of aesthetic education. From this point of view, the introduction of educational technologies based on creative pedagogical activity is important. Creative pedagogy requires the teacher to think in a new way, create a creative environment in the lesson, and involve the student in the educational process as an active subject.

Providing aesthetic education through creative pedagogical activities increases students' interest, develops their ability to think independently, create, and express themselves freely. Creative tasks, interactive methods, interdisciplinary integration, and the use of information and communication technologies further enhance the effectiveness of aesthetic education.

Therefore, in this article, it is relevant to analyze the role of creative pedagogical activity in the process of aesthetic education, its theoretical foundations and significance in educational practice. The main goal of the study was to reveal the pedagogical possibilities of a creative approach in the effective organization of aesthetic education.

Main part:

In the modern educational process, aesthetic education is one of the important factors ensuring personal development. Aesthetic education serves to form in students the perception of beauty, understanding of art and natural phenomena, their evaluation, and a conscious attitude to aesthetic values. This process is of great importance in enriching the inner world of students, developing their spiritual and moral qualities, and expanding their creative thinking. Educational practice shows that the effectiveness of aesthetic education is largely determined by the level of creativity of pedagogical activity.

Creative pedagogical activity is an important pedagogical tool in the effective organization of aesthetic education. Creativity requires the teacher to think in new ways, to deviate from traditional approaches in the lesson process, and to organize education taking into account the interests and needs of students. Lessons conducted on the basis of a creative approach increase the activity of students, encourage them to think independently and freely express their opinions. As a result, the process of aesthetic education is revitalized and students develop a positive attitude towards art and beauty.

The importance of creative pedagogical activity in the process of aesthetic education is that it serves to develop the aesthetic needs of students. Students perceive works of art not only as spectators, but also have the opportunity to analyze, evaluate and creatively approach them. In this process, students' imagination, emotional sensitivity and creative abilities develop. Aesthetic education organized on the basis of a creative approach, in addition to forming the aesthetic taste of a person, also increases his social activity.

The introduction of creative pedagogical activity in the educational process enriches the content of aesthetic education. Through creative tasks, exercises aimed at free thinking, and the creation of problem situations, students develop a need to understand beauty and create it. This approach allows students to identify and develop their individual abilities. Especially in art classes, a creative approach serves to reveal the inner potential of students.

Creative pedagogical activity creates a wide opportunity to organize aesthetic education on the basis of interdisciplinary integration. By combining various disciplines with art, culture and aesthetic values, students' worldview expands. For example, by connecting literature, history, geography and music, students develop aesthetic thinking. Such integration helps students to systematically master their knowledge and strengthens the place of aesthetic education in the educational process.

The use of information and communication technologies is also an important component of creative pedagogical activity. Multimedia tools, video materials, virtual exhibitions and interactive presentations make the process of aesthetic education more effective. With the help of modern technologies, students have the opportunity to directly get acquainted with works of art, objects of cultural heritage. This plays an important role in the development of their aesthetic perception.

In organizing aesthetic education based on a creative approach, the teacher's personal creativity is of particular importance. A creative teacher is not limited to imparting knowledge during the lesson, but also forms in students a sense of beauty, interest in art, and a need for creativity. The teacher's aesthetic culture and creative thinking directly affect students.

Therefore, a teacher must constantly work on himself, master new pedagogical technologies and apply them in the educational process.

Aesthetic education, organized through creative pedagogical activities, has a positive impact on the personal development of students. In this process, students have the opportunity to demonstrate their

abilities, their self-confidence increases. Aesthetic education forms a person's sense of refinement, taste, culture and moral responsibility. As a result, students grow up as individuals with aesthetic views, ready to actively participate in the life of society.

Also, creative pedagogical activity expands the educational possibilities of aesthetic education. In the process of creative activity, students acquire social skills such as teamwork, communication, and respect for each other's opinions. This increases not only the personal, but also the social significance of aesthetic education.

In general, creative pedagogical activity creates important pedagogical conditions for increasing the effectiveness of aesthetic education. The educational process organized on the basis of a creative approach develops the aesthetic taste, creative thinking and spiritual world of students. Therefore, organizing aesthetic education on the basis of creative pedagogical activity in the modern education system is one of the urgent pedagogical tasks.

Conclusion:

In conclusion, aesthetic education is an integral part of the modern education system and plays an important role in ensuring the spiritual, moral, cultural and creative development of the individual. Effective organization of the process of aesthetic education serves to develop students' perception of beauty, the formation of a conscious attitude towards art and natural phenomena, and the development of aesthetic taste and creative thinking. The results of the study show that the use of creative pedagogical activities in this process significantly increases the effectiveness of aesthetic education in the educational process.

Aesthetic education, organized on the basis of creative pedagogical activity, increases the activity of students, develops their ability to think independently, freely express their thoughts and creative approaches. Creative tasks, interactive methods, interdisciplinary integration and the use of modern information and communication technologies enrich the aesthetic perception of students and bring the educational process to a new level in terms of content. As a result, the process of aesthetic education becomes more lively, and students' interest in art and beauty increases.

The study revealed that the teacher's personal creativity and professional skills are an important factor in implementing aesthetic education based on a creative approach. A creative teacher creates a comfortable and free creative environment in the educational process, and has the opportunity to identify and develop the individual abilities of students. At the same time, the teacher's aesthetic culture and innovative thinking have a direct positive impact on students.

In conclusion, it is worth noting that increasing the effectiveness of aesthetic education through creative pedagogical activity is one of the important pedagogical tasks facing the modern education system. This approach, along with the development of students' aesthetic taste, creative thinking and spiritual world, serves to form them as individuals ready to actively participate in the life of society. Therefore, improving aesthetic education in the educational process on the basis of creative pedagogy will remain one of the relevant directions for pedagogical research and practice in the future.
