XONANDALIKNI O‘QITISHDA XORAZM SUVORALARINING PEDAGOGIK AHAMIYATI

Davletov Farxod, Yunus Rajabiy nomidagi O’zMMSI professori

Annotatsiya. Mazkur maqolada Xorazm musiqa madaniyatiga xos bo‘lgan suvoralarning xonandalikni o‘qitish jarayonidagi pedagogik ahamiyati ilmiy-nazariy jihatdan tahlil qilinadi. Shuningdek, suvoralarning og‘zaki an’ana asosida o‘rgatilishi ularning didaktik imkoniyatlarini kengaytirishi, milliy musiqiy tafakkur va ma’naviy-estetik tarbiyani rivojlantirishdagi ahamiyati yoritilgan. Maqolada xonandalik ta’limida suvoralardan samarali foydalanish orqali an’anaviy ijrochilik maktablarini saqlash va yosh avlodga yetkazish masalalariga alohida e’tibor qaratilgan.

Tayanch so‘zlar: *Xorazm suvoralari, an’anaviy xonandalik, musiqiy ta’lim, pedagogik ahamiyat, og‘zaki an’ana, vokal ijrochilik, musiqiy eshitish, milliy musiqa merosi, estetik tarbiya.*

«ПЕДАГОГИЧЕСКОЕ ЗНАЧЕНИЕ ХОРЕЗМСКИХ СУВОРОВ В ОБУЧЕНИИ ВОКАЛЬНОМУ ИСКУССТВУ»

Давлетов Фарход, профессор УзНИМИ имени Юнуса Раджаби

Аннотация. В данной статье научно и теоретически анализируется педагогическое значение суворов, присущих хорезмской музыкальной культуре, в процессе обучения пению. Также подчеркивается важность обучения суворам на основе устной традиции, расширения их дидактических возможностей и развития национального музыкального мышления, а также духовно-эстетического воспитания. Особое внимание уделяется вопросам сохранения традиционных исполнительских школ и передачи их молодому поколению посредством эффективного использования суворов в певческом образовании.

Ключевые слова: *хорезмские народные песни, традиционное пение, музыкальное образование, педагогическое значение, устная традиция, вокальное исполнение, музыкальное восприятие, национальное музыкальное наследие, эстетическое воспитание.*

PEDAGOGICAL SIGNIFICANCE OF KHOREZM SUVORAS IN TEACHING SINGING

Davletov Farkhod, Professor UzNMAI named after Yunus Rajabi

Abstract. This article scientifically and theoretically analyzes the pedagogical significance of the suvors inherent in the Khorezm musical culture in the process of teaching singing. It also highlights the importance of teaching suvors based on oral tradition, expanding their didactic capabilities, and developing national musical thinking and spiritual and aesthetic education. The article pays special attention to the issues of preserving traditional performing schools and passing them on to the younger generation through the effective use of suvors in singing education.

Keywords: *Khorezm folk songs, traditional singing, musical education, pedagogical significance, oral tradition, vocal performance, musical hearing, national musical heritage, aesthetic education.*

In the Uzbek folk musical heritage, the suvaras, which are characteristic of the Khorezm oasis, have a special aesthetic, educational and didactic significance. Suvaras are not only a musical genre, but also an important means of formation, development and transmission of the art of singing from generation to generation based on oral tradition. In particular, their use in the process of teaching

singing will form musical thinking, performance culture, and the ability to feel national melody in future singers.

The Greek philosopher Plato said: “The greatest educational factor is not in the art of music, but in the art of music, which, more than all rhythm and harmony, finds its way to the heart and gives it strength and beauty, which, if education is properly directed, will be its opposite and will be painful.” Aristotle (Plato) confidently admits this idea: “Music is the moral side of the human soul.” "It has an impact to a certain extent, but it does affect the upbringing of young people". The Eastern philosopher Abu-Nasr Al-Farabi states that music has a significant impact on the formation of personality: "This science (i.e. music) is useful in that it brings order to those whose actions have lost balance, brings those who have not achieved perfection to perfection, and preserves the balance of those who are in balance. Musical knowledge is also useful for the health of the body"[1].

In the traditional folk art of the ancient Khorezm oasis, the place of Suvora (Goyanda) songs is of particular importance. Traditional folk art, as an integral part of Uzbek musical culture, has a centuries-old history[2]. This art form developed on the basis of oral tradition and has preserved its vitality for centuries through the school of master and apprentice. One of the unique didactic tools in traditional honandali is the suvora. In the Uzbek honandali school, suvoras perform not only an artistic, but also an educational (pedagogical) function. They perform many important didactic functions in the formation of the singer's personality, in particular, working on the voice, forming stylistic clarity, and cultivating musical hearing. The didactic significance of musical instruments in the educational process is manifested in several main criteria. First, they create the opportunity to memorize musical materials and perform them repeatedly. This aspect serves to strengthen the student's musical memory. Secondly, with the help of the suvoras, technical aspects such as intonation purity, breath control, melody decoration, and musical coherence are taught. In particular, in classes based on oral tradition, suvoras are taught under the direct guidance of the teacher, in a marching band (or together with a rubab or a doira). This process develops not only the student's performance skills, but also musical sensitivity, and means of emotional expression. Another important aspect of the songs is the formation of spiritual and aesthetic views in the student through their mastery. Each song embodies its own spiritual, spiritual and aesthetic expression. For this reason, teaching violin not only develops musical competencies, but also enriches the emotional world of the student and contributes to the expansion of his spiritual education.

With their wide-ranging melodic structure, complex melodic movement, rhythmic variety, and profound artistic content, Suvorals are an important pedagogical resource for singing education. Through them, students:

- gain a deep understanding of national tones and intonations;
- develop their vocal abilities in a natural way;
- learn to feel the harmony of melody and words.

From a pedagogical point of view, the songs serve as a convenient material for teaching methods based on practical, auditory, and repetition in teaching singing.

Today, by integrating traditional folk dances with modern didactic approaches, more effective results can be achieved in the educational process. For example, by analyzing folk dances with written and audiovisual sources, developing elements of improvisation in their performance, and comparing folk dances from different schools, it is possible to form analytical and creative thinking in students.

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-12

In the process of introducing students to the Khorezm language, it is considered appropriate to use modern pedagogical technologies that stimulate creative thinking. The peculiarities of such technologies are that they allow students to find solutions to several tasks at the same time and achieve results in the implementation of the assigned tasks. Pedagogical processes organized on the basis of pedagogical technologies that encourage students to be creative ensure the rapid formation of personal qualities in students and contribute to the qualitative improvement of acquired knowledge, practical skills, qualifications, and competencies. It develops creative processes and ensures efficiency. As a result of the widespread use of such modern pedagogical technologies in traditional singing classes of music schools, a culture of visual, auditory and independent understanding of the tasks assigned to students is formed[5].

The use of technologies that encourage students to think independently and creatively in the educational process is implemented in three areas:

- in the process of traditional teaching;
- in the process of multimedia teaching;
- in the process of implementing practical aesthetic activities.

The use of musical instruments in vocal education is of great importance not only as a means of professional, but also as a means of moral and spiritual education. Musical instruments reflect:

- the historical memory of the people;
- national values;
- social life landscapes.

While traditional home economics teaching can help enrich students' self-awareness with the help of other methodological tools, the effectiveness of the impact achieved through cognitive methods and technologies can be clearly seen. [4].

One of the didactic aspects of the songs in teaching traditional singing is that, first of all, the songs develop musical hearing and memory. Due to their melodic simplicity and repetition, students easily memorize and firmly master them. This aspect is very important in shaping the student's musical perception and hearing ability. Secondly, the training of suvaras leads to the acquisition of intonation purity, correct distribution of breath, melody decoration, and syllabic performance technique. Each suvara has its own stylistic presentation, which serves to master the performance styles of singing schools (for example, Khorezm, Fergana-Tashkent, Bukhara). Therefore, it is important to take into account regional characteristics in the process of training suvaras.

The Ushinshidan Suvoras encourage improvisation and creative thinking in the honanda. Although they serve as a measure, their performance with various decorations and stylistic changes develops creativity in the student. This is considered a necessary step in achieving a high level of performance in the art of honanda.

Musical instruments are also an important factor in the spiritual and moral education of students. Through them, the aesthetic views, mental states, and cultural values of the people are expressed, and mastering such musical instruments forms a sense of national identity and a respectful attitude towards musical culture in students. Violins are not only a musical tool in teaching singing, but also a rich source of didactic, aesthetic, and educational value. Systematic training in them and the organization of musical classes on their basis ensure that students have solid theoretical and practical knowledge. For this reason, the importance of water resources in chorale teaching is unique, and a thorough study of their teaching methodology remains an important scientific and pedagogical task.

VOLUME-5, ISSUE-12

In conclusion, the lute is an important didactic, aesthetic and educational tool in the process of teaching singing, and plays an important role in the professional formation of future singers. By systematically introducing them into the educational process, students develop not only high-level vocal skills, but also national musical thinking and cultural awareness. Therefore, it is necessary to thoroughly study and widely implement water resources as an integral part of musical education from a scientific and pedagogical perspective.
