## ABSTRACT

This study investigates methodological approaches to improving the use of pedagogical software tools in fostering students' independent self-development within an information-educational environment. A quasi-experimental design involving control and experimental groups was implemented. The findings demonstrate statistically significant growth in self-regulated learning, digital competence, and academic performance indicators.

**Keywords:** information-educational environment, pedagogical software tools, self-regulated learning, digital competence, adaptive learning, higher education.

## INTRODUCTION

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

## LITERATURE REVIEW

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

VOLUME-6, ISSUE-2

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

**METHODS**

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

**RESULTS**

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

**DISCUSSION**

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence. Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the development of students' self-regulated learning and digital competence.

**CONCLUSION**

Digital transformation in higher education requires systematic integration of pedagogical software tools. Adaptive systems, LMS platforms, and learning analytics significantly contribute to the
