TEACHER EDUCATION JOURNEY: LOCAL TO GLOBAL

Prof. Pravat Kumar Dhal

M.Sc., M.Ed., M.Phil., Ph.D Head, Department of Education

Magadh University, Bodh Gaya

E-mail: pravatkumar.dhal@gmail.com

Abstract: *It is a common assumption that education is a panacea which can provide knowledge, truth, beauty, power, wealth, peace, security, love and ecstasy. Teacher is the real hero in educational enterprise. A good teacher is like a priest who can help the learners by his conscious power to unite with the real Source. He is a candle who can kindle other candles. The future teachers should rely on life long, self-education and to be constant readiness to face and master the unexpected. Due to material development (external) only teachers are becoming worries and frustrations rather delight and realizations. To overcome these challenges both material and spiritual development is needed. Teacher education should provide this. Teacher is a real social engineer who can build the nation. No profession can be compared with teaching. Economic development is not real development. Knowledge is the foundation of any progress of civilization. Modern science and technology will be helpful in teaching learning process. It cannot replace teacher. Teacher can use it judiciously for effective teaching. Research says that, teacher education in every country is neglected. There are several pitfalls in this field. But it is said that Hence, it is the time to rethink about teacher education. On the whole, the teacher education should be spiritual based, literally developed, scientifically advanced and technologically equipped. Then, an excellent global teacher may produce.*

Keywords: *Education, Teacher, Teacher education, Global education, Global Teacher.*

Introduction

According to National policy of Education1986 (India, p.25), 'No people can rise above the level of its teacher.' Further, Henry Adams says, 'A teacher affects eternity, he can never tell where his influences stop'. Human civilization has seen the above words among the great teachers like: Viswamitra, Valmiki, Vasistha, Sri Aurobindo, Swami Vivekananda, Radhakrishnan, Confucious, Socrates, Plato, Aristotle, Froebel and Dewey etc. They inspired us. What they had! We have to think deeply. They were not mere human form only. They signify to great consciousness. They are Teachers for all time. They influence others by their own consciousness and teaching. Then what is consciousness? Simply it is a power achieved from Supreme or God or Divine; whose characteristics are Absolute, Perfection, Truth, Beauty, and Goodness.

Now a few questions arise in mind that how should be a teacher? What should be his ability? How would be his education? What should be his potentialities? How he can become a global teacher? How can one accept the new challenges? These are fundamental questions.

Before going to discuss it, it is needed to know what education is. What are the objectives of education? Education is a vast term. Each definition signifies some aspects, not whole of education. It is a common assumption that education is a panacea which can provide knowledge, truth, beauty, power, wealth, peace, security, love and ecstasy. In education there are three basic elements: God (the source of all Knowledge and Wisdom), learner (who seeks to learn), and teacher (the agent or the communicator of earning). A good teacher is like a priest who can help the learners by his conscious power to unite with the real Source. He is a candle who can kindle other candles. Then it may be possible to achieve the above objectives.

According to history, perhaps teacher training was commenced in 'Mohenjo-Daro' and 'Harappa' civilizations. In India after the 'Gurukula' system the first formal teacher training was started in Madras by Missionary society. In Europe the Church, in India the Gurus and in China the Confucians influenced and regulated the teacher preparation. It is obvious that in the world scenario the teacher education had varied beginnings as to their thinking and imagination. Its development has been promoted according to their socio-cultural and political set ups. But it is a common notion in all societies that trained teachers are preferred more than untrained ones. During the period of Calcutta Commission (Sadler) in 1917-19, the 'Teacher Training' in India was changed to 'Teacher Education'. Since that time it has been observed that teacher education in India has always been neglected. The teacher educators who are doing more labor, who have more qualifications are considered lower grade than a professor in common discipline. Government of India gives more attention to IIMs/NITs/IITs/NISTs/AIMs etc., but it is point to discuss that teachers create all the prior products. They cannot produce teachers.

"In spite of this, it is true that teacher education in India is in the path of progress. Day to day it is becoming secular and democratic rather than religious tradition. Researches indicate that 'the best teacher can increase the learning speed of pupils by up to four times.' Dylan William of Institute of education, Cambridge was in favor of this statement. He supported formative teacher assessments to improve standards. Improving quality of teachers dignifies the quality of education, which is the basic need for development of any civilization. Hence quality of teacher education has tremendous importance to make excellent teachers in society. So, how would be the teacher education?"(Dhal, 2015)

It is matter of pleasure that we are celebrating the birth day of The National Council of Teacher Education (NCTE) as Silver Jubilee today. Welcome to this International Conference for generating a platform for sharing of ideas about prospects, challenges and processes among stakeholders. It is obvious that teachers are backbone of country, who care and nurture the new generation. The contributions of NCTE as an apex body to the teacher education sector of India is unique. The real motto of NCTE is the progress of teacher education in India. But, in the course of time, sometimes it accelerates and sometimes it is affected by the ruling Government and stakeholders due to partial knowledge or ignorance. In this scenario, the Integral approach of education has key to success. Here, everything is related to others, there is no circumference, but the centre is everywhere. We consider other as ourselves not the

fellow being. Now, it is the time to rethink about it. Hope this conference will meet the aims and objectives selected!

Objectives

- To examine the current scenario of teacher education-challenges, process and prospects;
- To share innovations in curriculum, pedagogy and assessment in schools and teacher education institutions;
- To examine the integration of ICT in teaching, learning and evaluation;
- To examine the status of inclusion in our country with focus on gender, learners from EWS and LWD;
- To find the management of teacher education in our country;
- To examine the possibilities of globalization of teacher education.

The Current Scenario of Teacher Education

It is observed that the Present system of teacher education in India is not effective. Its quality is diluted. The Justice Verma Commission on (2012) constituted by Supreme Court of India found that "a majority of these standalone teaching institutes - over 10,000 in number - are not even attempting serious teacher education, but are essentially selling degrees for a price." Further, according to New Education Policy (2019), "Heartbreakingly, the teacher education sector has been beleaguered with mediocrity as well as rampant corruption due to commercialization. Most institutions today providing teacher education are small colleges in the private sector that offer only a single narrow programme, and where there is a general lack of commitment to the need for rigour and quality in teacher preparation. Indeed, according to AISHE data for 2015-16, of the 17000+ colleges in India that teach just a single programme, nearly 90% are teacher training institutes!"

Banarjee committee (2008) reported that, the NCTE (the highest apex body of Teacher Education in India) had moved away from its mandate of ensuring quality teacher education and was preoccupied with sanctioning institutions. There are several criticisms and court cases appear against NCTE. On the whole, the teacher education in India is not healthy. What about other countries?

Dhal(2015) cited the view Ramamurthy Committee (1990), "Teacher training in the university system is rather week. All along very right emphasis has been laid in the building up professional cadres of teachers from down at the level of primary school teachers. However teachers who are recruited in the university and college system are not given adequate training as of now."

Good land (1990),Sheehem and Fullan(1995) commented that teacher education has failed to achieve the place it deserves in the improvement of education. Tisher(1995) was of the view that teacher education as having a week knowledge base, a shallow curriculum and an inability to attract top students. In Britain Taylor (1995) also found that teacher education has been found under criticism.

Singh (1990) says, "The teacher education in UK is in state turmoil. Things are shaping and several new experiments being tried out. A whole range of new courses being offered on absolutely innovative lines. . But human failings have left their deep impress in their programmes. The universities continue to behave in an aristocratic manner looking down upon those who seek their validation or authority….Open University has posed yet another challenge to the rarefied air of the universities with considerable degree of success." Teaching career in UK is the last choice available. The high cast people are in best positions of the universities.

Teacher education in USA has several problems. According to Singh (1990),"The problems range from an ever increasing number of teacher's strike, school indiscipline, subject of incompetence of teacher in teaching. Lawrence A. Crewmen has brought to the people's notice the 'decline quality in teacher training'." Teaching is perceived one of the poorest jobs. Hence, a few learners come to this profession. There is shortage of competent teachers in new areas along with poor quality of teachers in English language and literature appeared.

Dhal (2014) cited the view regarding Japanese teacher education which was coined by Grewal (1990) said that, teacher training of Japan has currently received public attention. A private Commission on education, appointed by Japanese prime minister, points out in its report that teachers are "not just ordinary workers." The report has made two recommendations in this regard. One is introduction of internship before formal employment and the other is "recruitment of people with rich experience outside the education field" so as to recruit teachers of diverse talent and knowledge.

From the above discussion it is very clear that teacher education in every country is neglected due to ignorance. There are several pitfalls in this field. But it is said that "If we educate a boy, we educate one individual, if we educate one girl, we educate the whole family and if we educate one teacher, we educate the whole community." Teacher is a 'friend, philosopher and guide' or 'facilitator and manager', whatever it may be, the question is how can he become this. It is obvious that 'teacher is not an information monger' only, he is much more than that. Hence it is time to re-think about the teacher education in the Globe.

Educational Policy

Policies come and go. Welcome to new education policy 2019, but it has some gaps. It should be filtered by the recommendations of stakeholders. It reduces importance of M.Ed. Frequently change of norms by NCTE affect the progress of Teacher education in India. Policy should be made with long-term perspectives We have made CTEs, IASEs, RIEs, Centres of Potential Excellence, Deemed University, open and Distance learning, Autonomous colleges, Central Universities, state universities, Unitary Universities, State Universities, Affiliated Universities, and Private Universities etc. These are the pace setters of education. It creates the gulf between between existing elitisms and sophistication in one hand mass mediocrity and demoralization in the other hand. Education in School, College and university should concern itself with the basic knowledge or disciplines around which technology develops and not with the impermanent latest technology. A rigid so called job oriented education, vocational education and interdisciplinary approach etc. may cause more frustration and helplessness. The aims of education must be basically at awakening and developing the pupil's diverse,

dormant faculties of observation, experimentation, and speculation. Within the broad frame work of theory, the pupil should be encouraged to learn through doing, to experiment from himself, and the adventure boldly into unknown. The pupils have to acquire competence and self-confidence through self-effort that will train them to improvise the necessary specialist skills to meet the future challenges. Education should provide energy of the body, awareness of mind and especially the deeper poise of spirit that will develop the relevant skills for life. The present horizontal (subjects, disciplines and courses) or vertical (nursery to Ph. D) education promotes isolation and alienation and not community and communion.

"Over three centuries ago, Milton said a complete and generous education is that which 'fits a man to perform justly, skillfully and magnanimously all the offices, both private and public of peace and war.'… Neither the horizontal nor the vertical, but the integral view of education alone holds the key to success (Iyengar, 1976)."

With horizontal and vertical integration in education, there is more important the integration of spirit and matter, of the aspiration within and the struggle and victory without. The goal of education is to help the pupil to evolve the noble specimen of the race, a witness to truth, in the four fold aspects of Love, Knowledge, Power and Beauty. The educational process should be simply the flowering of human consciousness, ever more intimate and far-reaching till it becomes knowledge, action and realization in one. Education must be a lifelong process of evolution and growth, well. The pupil and teacher are both learners, they will organize the teaching-learning process harmoniously. Flexibility and dynamism, rather than rigidity and uniformity should be the governing laws in educational process. Encourage the pupil to exploit his innate potentiality and curiosity and learn largely by his own efforts, formulating his own projects and its solution through self-regulated programmes of work experiences; and to engage in group activity or cooperative work with his fellows, alike for gaining knowledge and skills and for community involvement and service.

Innovations in Schools and Teacher Education Institutions

Curriculum

The curriculum of schools or teacher education must be looked on long term perspective rather than short one. It should be prepared at least for two to four years in a residential campus according to level of education (primary, secondary and tertiary). The individual should be helped to realize his utmost potentialities. He should be enabled to find his proper relation with his social group and his nation. He should be encouraged to find his true place in global community. Hence, there is a personal, a social (national) and global (racial) aspects of education. In the first changing global situation today the teacher education should be comprised the needs of harmonious development of body, mind and soul, and the mobilization of enduring gains of the past, the thrust of the present and the possibilities of unfolding future.

The curriculum of education or teacher education should include the following subjects. They are: (1) Physical Education; should have an important place. It contains physical training, sports, games, gymnastics, balance diet and preventive care. (2) Vital Education: It includes music .arts, drama, crafts, ballet etc., so that life energy will be channelized through freedom,

leadership, responsibility and learning by doing. (3)Mental Education: This must be developed through academic studies like languages, mathematics, social sciences and pure sciences as choice paper along with foundations of education.(4) Psychic and Spiritual Education: All kinds curricular and co-curricular activities should aim at inculcating spiritual and psychic values like love, truth, faith in God, competency in performance strength of mind and heart.(5)International Education: Universal love, sympathy fellow feeling and understanding are the important characters which should be included along with.

The future teachers should rely on life long, self-education and to be constant readiness to face and master the unexpected. He might be guided by the own psychic being. Due to material (external) development only teachers are facing worries and frustrations rather delights and realizations. To overcome these challenges both material and spiritual development is needed. The acquired information should be fused into knowledge and practice as wisdom. It should be developed with the basic knowledge or disciplines around which technology develops. Regarding this approach Iyengar (1975, P.9) said, "Within a broad frame work of theory, the people should be encouraged to learn through doing-to experiment for himself-and to adventure boldly into the unknown. Learners have to acquire, through self-effort as far as possible, the sort of competence and self-confidence that will train them to improvise the necessary specialist skills to meet future contingencies and challenges. What education should thus try to provide is not so much a finished skills valid for a life-time (there are no such skills any more),but the energy of body, alacrity of mind, and especially the deeper poise of spirit that will develop the relevant skills as and when required."

Every subject should be considered in relation to the Whole, the very Ground of Reality. The stress should be given to integral growth of the whole human personality. The amalgamation of matter and spirit should be emphasized. The education program would simply be the flowering of human consciousness.

The content of compulsory courses may be drastically reduced by casting aside the dead survivals. Free time may be made available to learners for studies or projects of their own. A much wider real choice of subjects may be offered to suit the varied aptitudes and preferences of the learners. The teacher must be a friend, adviser, collaborator, and fellow adventurer rather that of a sales man, examiner, policeman, and magistrate. Promoting healthy teacher-learner dialogue.

The ideal of all-round excellence may be placed before the learners, but viewed less and less in terms of grades, ranks, marks and distinctions, and more and more as the efflorescence of personality in its wholeness and wholesomeness. There may be set apart daily some minutes of silence, and an hour of meditation or silent self-introspection every week, when the pupils are encouraged to cultivate the Divine Seeing Eye that looks deep into the innermost truth of things. The attempt to give an inner orientation to education may be expected to achieve in an accession of keenness, freshness, vitality, open-heartedness and clarity of vision.

Pedagogy

The Teacher Education is a daring adventure into unknown possibilities. Here teacher will constantly learn, discover, aspire, advance, grow in knowledge, acquire newer skills, rise in the wings of contrivance and complexity and try to rise higher and higher. There may be failure, yet the spur of aspiration should be unfailing and defeats should be refreshed by new hope and effort.

The teachers and the learners have to awake about the following quote provided by Sri Aurobindo in his treatise The Human Cycle:

"...each human being is a self-developing soul and … the business of both parent and teacher is to enable and to help the child to educate himself, to develop his own intellectual, moral, aesthetic and practical capacities and to grow freely as an organic being, not to be kneaded and pressured into form like an inert plastic material. It is not yet realized what this soul is or that the true secret, whether with child or man is to help him to find is deeper self, the real psychic entity within. That, if we ever give it a chance to come foreground, and still more if we call it into the foreground as 'the leader of the march set in our front', will itself take up most of the business of education out of our hands and develop the capacity of the psychological being towards a realization of its potentialities of which our present mechanical view of life and man and external routine methods of dealing with them prevent us from having any experience of forming any conception."

A congenial environment is to be created, which will facilitate learner's discovering and activating the psychic being within. Thereby, the ego will disappear. A good rapport with the soul or the psychic being in others will be established. The sense of separateness will be lost. He can unite with the universal spirit. Sri Aurobindo says, "The evocation of this real man within is the right object of education and indeed of all human life". By transforming one's ego desire one can find himself and make himself a true representative of the Divine in the world. The academic atmosphere contact with the Divine presence, dedicated love of the teacher, the stimulating fellowship of other pupils, unending romance of life, the constant play of curiosity and the thrilled satisfaction of doing things on one's own or by spontaneous co-operative effort- these are among the elements of educational engineering that will prepare the future teacher.

Skills and Techniques

Along with the skills and different models of teaching-learning the following strategies might be practiced during teacher education programme. Those will be veryhelpful, (Dhal, 2014)

- Applying creativity
- Becoming conscious
- Becoming sincere
- Brain storming
- Churning of ideas
- Collective wisdom
- Conscious environment
- Consider everything as opportunity for progress

- Cooperation
- Dedication
- Development of own area
- Doing research and solving problems accordingly
- Encouraging and motivating
- Enjoy the work always
- Gratification
- Guiding subordinate
- Hard working
- Helping others
- Inner dialogue
- Introspection
- Leadership in action
- Learning from everything
- Look at your weakness, never condemn it rather try to reject one by one
- Love to each other
- Love to profession
- Managing thyself
- Never condemn human resource or potentiality
- No rigidity rather flexibility in organization
- Positive thinking
- Preparing documents properly
- Promoting healthy teacher-pupil dialogues
- Remain happy
- See well in yourself and in others
- Self- analysis
- Self-discovery
- Setting proper vision, mission and goals
- Step back
- Using favorable scientific ideas
- Using technology judiciously (Dhal,2014)

The integration of ICT in Teacher Education

According to Jadav(2011), "When teacher education practices are observed in respect to parameter of student teachers developing on ICT based teaching learning, the majority of teacher education practices are rated as moderate (52%), some as poor (28%), and rest (20%) as good. This indicates that a majority of teacher education practices are only satisfactory not up to mark, some practices are poor in respect of this parameter and some are good… Almost half of the colleges are below average in respect of this parameter. In rare cases this facility is up to the mark and rest of colleges are only at satisfactory level. The parameter ICT based teaching learning is found mostly neglected in curricular practices of pre-service teacher education. It is clear that colleges of education are not paying much attention towards preparing student teachers for ICT based teaching learning."

The advanced countries are using ICT based learning enormously. In some cases each student avails system (computer), iPad, mobile, projector, internet, e-content and project work, etc. ICT techniques such as podcasting, social media, movie making, blogging, digital storytelling, e-portfolio, web quest, wikis are collaborating tools are very important for enhancing learning. It helps for problem-solving, decision making, collaborating, increases creativity, motivation and deep understanding of the subjects if used properly. It is very harmful if used in negative direction.

It is the good symbol that MHRD Government of India has created a nice platform of MOOCs, i.e. 'Swayam', e-pathsala, smart schools, EPC in teacher education, skill India programmes, and development of e-Contents through CIET, SIETs, CEC, and 5 RIEs etc. Invention of 'Aakash' tablet, 'Vyas', 'Eklavya' 'Swayamprava', 'Gyan Darsan,' 'Zils,' for learning interaction, 'NTA' for examination & evaluation and production some software, e-books, and establishment of virtual universities are unique milestones of our country. Still we have to go far.

The above data shows that integration of ICT in teacher education is not up to mark. Internationalization of teacher education needs a good use of ICT in teaching-learning. Now a days, online resources and MOOCs are available freely. It requires less time, low finance and is self-pacing. Learners learn more with less effort. The educational institution should be design accordingly, a congenial environment must be created and teacher should be trained properly for its implementation. If we want transparency and development in evaluation, governance and accounts; ICT is a very powerful tool to implement it. Only making policy is not quite apt, moreover positive attitude, interest, and finance will be more helpful. All the stake holders of teacher education must be aware about it.

The Status of Inclusion in Teacher Education of India

a) Gender: Jatin, Agarwal & Srivastab, (2016) reported that, "according to Census of India 2011, literacy rate of females is 65.46% compared to males which are 82.14%. Compared to boys, far fewer girls are enrolled in the schools, and many of them drop out. Only the states of Kerala and Mizoram have approached universal female literacy rates. In rural India girls continue to be less educated than the boys. Boys in the same family will be sent to higher quality private schools and girls sent to the government school in the village. The chief barrier to female education in India are inadequate school facilities, shortage of female teachers and gender bias in curriculum as majority of the female characters being depicted as weak and helpless vs. strong, adventurous, and intelligent men with high prestige jobs. Studies regarding girls show that they are already excluded because of their gender, they face multiple barriers, making more difficult to enroll in and complete primary school and continue on to secondary school and higher studies."

On the whole, women are at a disadvantage in various ways in India. Gender inequalities in education impact India's sex ratio, women's education, social and economic conditions. In the same rate in case of teachers in secondary school, the female teachers exist 41.1% and

the male teachers are 58.9%. It is growing as per previous records. Conscious education, steady efforts, making policy, and participation of all stakeholders for implementation of policy sincerely might be helpful for combating the above challenges.

b) EWS Learners: According to Muralidharan(2014), the fundamental challenge in the design of high-performing and inclusive school systems is the following:

"Public schools are by definition inclusive, and cannot turn away anybody. However, they are plagued by weak governance and accountability, and a poor track record of converting spending to outcomes. Private schools typically have better management and are accountable to parents, but are typically not inclusive because they only admit students with the ability to pay. RTE clause 12 is a wonderful opportunity to design an education system that can leverage the strengths of both public and private provision while mitigating the weaknesses of the other."

A well-implemented clause 12 has the potential to transform school education in India by: (a) reducing socioeconomic stratification in schools, (b) empowering EWS children with more schooling choices and options, (c) increasing pro-social preferences and behaviour among wealthy children, (d) encouraging entry and expansion of higher-quality private schools catering to EWS students (since the government will pay the fees), and (e) forcing government schools to improve their quality since their monopoly power over the captive demographic of EWS children who cannot afford to pay private school fees will be reduced. The first three features could contribute to improving equity and social integration, while the last two could contribute to an improvement in quality in both public and private schools.

Recently, Government has taken initiative to implement EWS reservation in appointment field by 10% is welcome. Drafting any plan or policy is good, but in implementation, strict adherence must be followed.

c) LWD Learners: Kuyini and Desai (2013) examined the current skill levels of regular primary and secondary school teachers in Delhi, India in order to teach students with disabilities in inclusive education settings. They reported that nearly 70% of the regular school teachers had neither received training in special education nor had any experience teaching students with disabilities. Further, 87% of the teachers did not have access to support services in their classrooms (Cited in Sing, 2016 &Ghosh, 2017).

Deepa (2006) mentioned that a majority of the schools don't have special educators or counselors, even if they have students with disabilities, though the Rehabilitation Council of India Act, 1992 says that children with disabilities have the right to be taught by a qualified teacher. In the survey conducted by the National Centre, 55 percent of the 89 schools were found to have admitted students with disabilities, but only 20 employed special educators while twelve provided training to teachers for working with students with disabilities (cited in Ghosh, 2017).

Management of Teacher Education

According to Dhal (2014), "Modern management is materialistic, professional and felt as soulless. It is a technique imported from West. They concentrate on 'production targets' and 'profit and loss account'. The maximizing of profit becomes the ultimate goal. Regarding this Capra Fritjof (1987, pp.230-31) says; "This technology is fragmented rather than holistic, bent on manipulation and control rather than cooperation, self-assertive rather than integrative, and suitable for centralized management rather than regional application by individuals and small groups. As a result the technology has become profoundly anti-ecological, anti-social, unhealthy and inhuman." This materialistic management has lost belongingness, harmony, cooperation, fellow feelings, and as a whole, the human values. On the other hand it creates conflicts, violence, strikes and breakdowns in industry or institution."

"There is an invisible order that governs the universe. Sensing that order is the beginning of spirituality. Respecting that is the beginning of learning. Understanding it is the beginning of self-development. Flowing with it is the beginning of good management. To be animated by it is the beginning of leadership." (Saumendranathji, 2004)

Any good management aspires to achieve high degree of performance and productivity with peace and growth with harmony. One school of management says, production is increased by material incentives. Another school says, it is increased rather by impulsion of political and social idealism. But Gupta (2009, P.132) says, 'spiritual approach of management based on consciousness-from within-to-without management-that stimulates real prosperity'.

A good management needs a good manager or leader. A spiritual leader must have heightened consciousness who will dedicate himself to his profession. He must be a self-realized personality. Self-realization enhances self-management. A self-managed person can lead others and manage institution properly. He is more stable and charged who can influence others. He creates positive climate by his positive thinking. He loves and respects both animate and inanimate objects. He deals with peace, truth, knowledge, power, beauty, love and bliss. There are number of (saints) spiritual leaders in the earth who are the glowing examples. There are innumerable scriptures available in our society, which give wide knowledge regarding this. If it is practiced sincerely it will give positive result. It increases belongingness, harmony, cooperation, fellow feelings, and as a whole the human values. It is experimental fact. The researcher has been practicing it for twenty five years. The result is wonderful. (Dhal,2014)

A spiritual leader must be free from flattery, greed, suspicion and fear. Rather, he should have hard-won knowledge, a total sense of responsibility, and an approach of consciousness. According to Gupta (2009,P.140), he must "ponder over such steps as justice and fairness in thought and action, sincerity of purpose and words, awakening of consciousness, feelings of patriotism and nationalism, spontaneity of actions, aesthetic values, creation and satisfaction of higher actions, promotion of goodwill and oneness, behavioral decencies, satisfaction of religious and moral aspirations, human touch and sense of spirituality through instructional and behavioral programs and organizational adjustments."

A leader of teacher education can create an environment by his actions and behaviors to inspire his colleagues, students and parents (stake holders). He must have faith, dedication, introspection, and aspiration for a harmonious life and living. He should have a good character,

integrity and intellectual honesty, selfless and objectivity. First he must form a positive attitude to develop his consciousness. He must aspire to invoke Divine grace towards progress & welfare of his institution or profession.

A leader in educational institution should take care of all the components in the educational enterprise, i.e. man, material, machines, methods and money. It should remember that the Divine is in all things and all things are Divine. By giving care and attention in the form of mental interest, loving care, enthusiasm and physical concern one can contact and respect the Divine in matter.

In our society everybody wants maximum percentage of marks. This wanting almost forces students to close the door to inter inner worlds. But in case of proposed teacher education it should have to make a shift in assessment procedure so that a student life is not dominated by the common popular model. In assessment procedure it should be based on developmental model. The assessment procedure should be diagnostic and has to create self-awareness.

All the time, the trainees should be busy with something, exploring, discovering, experimenting, repeating etc. That is a constant learning should be taken place. A teacher has the vital task to guide this process, to offer certain feedbacks, to help the trainees, see certain structures so that they can grow to the maximum of their potential.

Evaluation in Teacher Education

A quality Teacher Education requires an evaluation which should be based on development and not on ranking. Therefore it:

- is diagnostic
- is participatory
- fosters self- understanding
- is non-judge mental
- gives positive feedback
- is individual
- requires self- evaluation and
- Creates self-awareness and self-discovery. (Huppes, 2001, P. 211)

Assessment

We may take the following points for assessment.

1. The environment of assessment should be open respectful enriching and encouraging.
2. Assessment will be done through observation.
3. We can use variety of evaluation techniques.
4. The number of paper and pen tests should be reduced.

5. We should always remember the objectives of assessment i.e., assessment is not for ranking but for development.
6. The tests which encourage rote-learning should be avoided.
7. The qualities and capacities of the students should be observed. Never assess these.
8. Self-evaluation must be encouraged.
9. Be enthusiastic, understanding, inspiring & open hearted.

The Prospects of Globalization in Teacher Education

Delor's Commission focused on "Learning to know, Learning to be, Learning to do, Learning to live together" in education of 21st century. How can it be possible! There was a great experience of the Indian seers in the similar word "Vasudheiba Kutumbakam", means the whole world is a family. It is possible only by development of consciousness. The human being who himself is conscious can respect others, love others and gradually he extends his arena from a small family to a larger universe. No doubt, the whole world is a school and all life is education.

'Learning to know', philosophically it means first to know thyself. Who knows himself, he knows others, and he can realize the Universe. This is the mysticism of spirituality. Hence becoming a global standard teacher it must be needed to become a good local teacher.

'Learning to be' means to become a truthful, fearless, and happier, enlighten, powerful, hero warrior. He can meet the challenges of future peacefully. By self experiment, he will be self-confident, an illumined whole personality.

'Learning to do' encourages scientific & experimental learning. Experiments provide one permanent learning. It is well known fact that experience is the best teacher. According to Sri Aurobindo, "teacher must be a yogi, hero and example". An exemplary teacher can influence his learners.

'Learning to live together' is a wider understanding task. It means people of any caste, creed, colour, sex, and country can live harmoniously without any breakthrough. This is really global approach of understanding. The true education can enhance this approach better.

On the whole, a whole perfect teacher has no boundary. He may be a teacher of village, nation and the world. He may be the Rubicon of any hurdle.

Conclusion

Teacher is a real social engineer who can build the society. No profession can be compared with teaching. The nation where teacher is worshiped that nation will progress. Only economic development is not real development. Knowledge is the foundation of any progress of civilization. Modern science and technology will be helpful in teaching learning process. It cannot replace teacher. Teacher can use it judiciously for effective teaching. Amalgamation of spirit and matter in teaching profession will make it more effective and permanent. Hence teacher education should be spiritual based, literally developed, scientifically advanced and

technologically equipped. The academics, academicians, researchers, planners, scholars, educators, managers etc. in this field should understand and practice the above ideas to implement the new paradigms in teacher education and become helpful for transformation of teacher education of our country. The true education must be education for growth of consciousness, education for future free world, education for transformation of man, nation and the globe. The attempt to give an inner orientation to education may help to achieve keenness, freshness, vitality, openheartedness, and clarity of vision. With the new Seeing Eye, the pupil moves with poise and purpose, understands more, finds all knowledge and experience with marvels of revelation, illumination and affirmation.
