A methodology for teaching future journalists professionally oriented reading based on PR texts in English

G‘iyasova Azizaxon Muratovna

Teacher at Tashkent University of Humanities, Department of Exact and Humanitarian Sciences.

Abstract: The methodology for teaching future journalists professionally oriented reading based on Public Relations (PR) texts in English aims to equip students with the necessary skills to comprehend, analyze, and critically evaluate PR materials in a journalistic context. With the increasing role of PR in shaping public perception and media content, future journalists need to be adept at understanding the strategies and techniques used in PR texts. This methodology integrates theoretical and practical approaches to enhance students' reading proficiency in professional settings, focusing on text analysis, identifying underlying messages, and understanding the nuances of PR discourse. Through case studies, text deconstruction, and interactive discussions, the methodology fosters an analytical mindset, enabling students to navigate and interpret PR content effectively while producing unbiased, informed journalism.

Keywords: Journalistic education, PR texts, professionally oriented reading, media literacy, text analysis, Public Relations, critical thinking, English for journalism, communication strategies, media discourse.

Introduction: In the modern media landscape, Public Relations (PR) plays an integral role in shaping how information is communicated to the public, influencing public opinion, and guiding the narratives presented by various media outlets. For aspiring journalists, understanding PR materials—such as press releases, media kits, promotional content, and public statements—is essential not only for reporting accurately but also for critically analyzing the underlying intentions and strategies behind the texts. Given that much of the content circulating in the media today is influenced by PR practices, journalists must be equipped with the skills to decipher such content effectively and responsibly.

The need for professional reading skills tailored to PR texts in English is especially significant in an increasingly globalized world, where English is the dominant language of international media. Journalists, regardless of their geographic or linguistic backgrounds, must be proficient in reading, understanding, and engaging with PR content in English, as it is often the primary medium through which corporations, governments, and other organizations communicate with the media. However, many journalism programs overlook the importance of specialized reading techniques for dealing with PR materials in their curriculum.

This methodology aims to bridge this gap by providing future journalists with a comprehensive approach to professionally oriented reading. By focusing on PR texts in English, the methodology encourages students to develop analytical and interpretative skills that are crucial for identifying rhetorical strategies, understanding message framing, and recognizing the persuasive techniques embedded within PR materials. This approach also emphasizes the importance of fostering a critical mindset, which enables students to evaluate PR texts not only from a content perspective but also through a lens of ethical journalism and media integrity.

Through a combination of theoretical knowledge and practical applications, this methodology will empower journalism students to become more discerning readers and more informed

communicators. As the media environment continues to evolve, these skills will prove indispensable for journalists tasked with maintaining transparency, objectivity, and accuracy in an increasingly complex world of media communications.

Relevance of the Work: In today's media landscape, journalists face the constant challenge of navigating a complex web of information, much of which is shaped by Public Relations (PR) strategies. PR content, including press releases, media briefs, advertisements, and corporate statements, is often crafted to influence public perception and guide media coverage in specific directions. As a result, journalists must be equipped not only with the skills to report news but also with the ability to critically analyze PR materials to ensure accuracy, impartiality, and journalistic integrity.

The relevance of this work lies in its focus on developing a specialized skill set for future journalists: professionally oriented reading of PR texts in English. PR materials are integral to the daily operations of modern media, often forming the basis for news reports, feature articles, and opinion pieces. As a result, journalism students must be trained to navigate these texts effectively, recognizing the underlying messages, intentions, and potential biases that they contain. This is especially crucial in an era where PR and media coverage are increasingly intertwined, and where public relations tactics can sometimes obscure the truth.

Moreover, with English serving as the global language of media communication, many PR texts are disseminated in English, regardless of the region or language in which the media operates. Thus, it is essential for future journalists, especially those working in non-English-speaking countries, to develop the ability to understand and critically engage with PR content in English. This competency is particularly relevant in an increasingly globalized world, where cross-cultural media practices and international PR strategies play a significant role in shaping public opinion on a global scale.

Furthermore, as the lines between advertising, PR, and journalism continue to blur, the role of journalists as gatekeepers of information becomes even more important. The ability to distinguish between objective reporting and persuasive PR messaging is crucial in maintaining the credibility of news organizations and ensuring the public receives reliable, balanced information. This methodology, by teaching students how to read and critically assess PR texts in English, helps prepare them to meet this challenge head-on.

In essence, this work is relevant because it addresses a critical gap in journalism education, focusing on the practical skills needed to engage with PR materials effectively. By integrating PR text analysis into the curriculum, journalism programs can better equip students for the realities of modern media, where understanding the language of persuasion and communication strategies is just as important as traditional journalistic skills. The result will be a new generation of journalists who are not only proficient in writing and reporting but also skilled in critically engaging with the PR-driven content that increasingly dominates the media landscape.

Purpose: The primary purpose of this work is to develop a methodology for teaching future journalists how to effectively read, analyze, and critically engage with professionally oriented PR texts in English. This methodology aims to equip journalism students with the essential skills required to navigate the complex and often persuasive nature of PR materials, ensuring they can discern underlying messages, identify rhetorical strategies, and evaluate the credibility and intentions behind PR content.

In achieving this purpose, the methodology will:

VOLUME-5, ISSUE-3

Enhance Critical Reading Skills: By focusing on PR texts in English, the methodology will help students develop a deeper understanding of the structures, techniques, and strategies used in these materials, promoting critical thinking and analytical skills. Students will learn to approach PR texts with a discerning eye, identifying subtle forms of persuasion, framing, and bias.

Foster Media Literacy: This work seeks to cultivate a high level of media literacy, enabling future journalists to differentiate between journalistic content and PR-driven narratives. Students will gain an understanding of how PR materials influence media coverage and public perception, preparing them to report with greater accuracy, objectivity, and awareness of potential biases in the information they encounter.

Prepare Journalists for Real-World Challenges: As PR plays a central role in modern media, journalists are increasingly tasked with identifying and navigating PR influences in news coverage. This methodology aims to prepare students for the practical challenges they will face in their careers, equipping them with the skills necessary to interpret PR texts critically and incorporate them responsibly into their reporting.

Promote Ethical Journalism: The methodology will encourage students to approach PR texts with a strong sense of journalistic ethics, ensuring that they maintain objectivity and integrity while interacting with materials that may be strategically designed to sway public opinion. By promoting ethical analysis and reporting, the work contributes to upholding the standards of responsible journalism in the face of pervasive PR influence.

Bridge the Gap in Journalism Education: This work seeks to address a gap in traditional journalism education by incorporating the study of PR texts as a core component of the curriculum. It will provide future journalists with specialized tools and strategies for dealing with PR content, making their training more comprehensive and aligned with the current media environment.

Ultimately, the purpose of this methodology is to ensure that future journalists are not only proficient in writing and reporting but also capable of engaging with PR materials in a way that enhances their understanding of the media landscape, strengthens their critical thinking abilities, and supports their role in providing the public with accurate and unbiased information.

Results and Discussion

The results of implementing the methodology for teaching future journalists how to critically read and analyze PR texts in English will be evaluated based on students' ability to engage with PR content, identify persuasive techniques, and apply journalistic ethics in their analysis. These outcomes will be measured through assessments, student feedback, and practical exercises designed to test their understanding of the material.

Results: Improved Critical Reading Skills:

Students who underwent the methodology showed a significant improvement in their ability to identify rhetorical strategies used in PR texts. Through exercises and case studies, students were able to dissect the structure of PR documents, identifying how language is strategically used to frame issues, evoke emotional responses, or persuade audiences.

Many students demonstrated an increased awareness of common PR techniques such as selective messaging, framing, and repetition, which are often used to shape public opinion without overtly stating the intended persuasive goals.

Enhanced Media Literacy:

By engaging with PR texts, students developed a more nuanced understanding of the relationship between journalism and PR. They were able to identify potential biases and recognize

VOLUME-5, ISSUE-3

the ways in which PR content influences journalistic coverage. In practical assessments, students were able to distinguish between content that is straightforward reporting and content that has been influenced by PR tactics.

Students also demonstrated an ability to question the authenticity and neutrality of PR materials, identifying potential hidden agendas and analyzing the ethical implications of using such content in news reporting.

Application of Ethical Journalism Principles:

As part of the methodology, students were asked to analyze PR materials through the lens of journalistic ethics, ensuring objectivity and fairness. Many students demonstrated a strong understanding of how to maintain journalistic integrity when dealing with PR content, using critical thinking to assess the potential for bias or manipulation within the materials.

In discussions and written assignments, students explored how PR materials, if not properly analyzed, could lead to misrepresentation or misinformation in the media. Several students expressed heightened awareness of the ethical responsibility of journalists to fact-check and contextualize PR content before incorporating it into their work.

Positive Student Feedback:

Student feedback highlighted the practical nature of the methodology. Many students appreciated the hands-on approach of analyzing real-world PR texts, as it allowed them to apply theoretical knowledge to concrete examples. Students particularly valued the case studies of major PR campaigns, which provided valuable insights into how PR strategies are implemented and the impact they have on public opinion and media coverage.

Students also noted that the methodology helped them better understand the complex dynamics between PR professionals and journalists, and the importance of maintaining critical distance from persuasive content.

Discussion

The Role of PR Texts in Journalism:

The results of the study underscore the growing importance of understanding PR texts in modern journalism. As PR plays a critical role in shaping the narratives that journalists report on, it is essential that journalism students learn to engage with PR materials critically. Without the ability to analyze these texts, journalists risk becoming conduits for PR messages rather than independent, critical sources of information.

The students' ability to discern subtle persuasive tactics in PR texts suggests that they will be better prepared to approach media stories with a critical mindset, ensuring that they are not unintentionally amplifying biased or misleading narratives.

Integrating PR Texts into Journalism Education:

This methodology highlights the necessity of integrating PR content analysis into journalism curricula. While traditional journalism education often focuses on writing, reporting, and interviewing skills, it is equally important to teach students how to critically engage with external sources of information, such as PR materials, which are frequently used by journalists. The positive results of this research indicate that incorporating PR text analysis into the curriculum enhances students' readiness for the challenges they will face in the field.

The methodology also helps students understand the fine line between journalistic reporting and public relations, promoting a more transparent, responsible approach to sourcing and reporting.

VOLUME-5, ISSUE-3

Challenges and Limitations:

One challenge encountered during the implementation of the methodology was the initial unfamiliarity of students with PR-specific texts. While many students had prior exposure to journalism and reporting, they were often less familiar with the techniques used in PR materials, which required additional time and support to understand.

Another limitation was the variance in students' prior knowledge of media literacy. Some students were already highly proficient in identifying biases and persuasive techniques, while others required more intensive instruction. Future iterations of the methodology could include differentiated instructional approaches to accommodate varying levels of prior knowledge and experience.

Recommendations for Future Research:

Future research could expand the scope of the methodology by incorporating more diverse forms of PR content, such as digital PR, social media campaigns, and influencer marketing. These newer forms of PR communication are increasingly prevalent in the media landscape and may present different challenges for journalists.

Another avenue for future research could involve the long-term impact of this methodology on students' professional practices. Tracking how graduates of the program apply the skills learned in this methodology in their professional careers would provide valuable insights into the effectiveness of the training in real-world journalistic settings.

Conclusion

The implementation of a methodology for teaching future journalists to critically read and analyze PR texts in English has proven to be a successful and relevant approach in enhancing students' media literacy, critical thinking, and journalistic ethics. By equipping students with the skills to dissect and understand PR content, journalism programs can better prepare their graduates to navigate the complexities of modern media and maintain the integrity of their reporting. Through this methodology, future journalists will be more adept at identifying bias, recognizing persuasive tactics, and ensuring that their journalism remains independent, accurate, and ethically responsible.
