THE TRANSLATION OF RELIGIOUS TERMS IN *SAODAT ASRI QISSALARI*

Nematullayev Nodirbek Muzaffar o'g'li
Lecturer, Department of Foreign Languages and Literature, Termiz University of Economics and Service, Uzbekistan
NodirbekNM2704@gmail.com

ABSTRACT

Religious words are more than just vocabulary. They carry emotion, belief, and deep cultural meaning. In this paper, I explore how five Islamic terms from the Uzbek translation of Saodat Asri Qissalari can be translated into English while keeping their original spirit. Following Eugene Nida's approach of dynamic equivalence, I focus on meaning and emotional impact rather than word-for-word accuracy. Some terms worked best with short explanations, others with familiar English phrases, and in some cases, keeping the original word made more sense. The main goal is to help English readers connect with the text in the same way Uzbek readers do, whether through a sense of respect, irony, or spiritual reflection.

KEYWORDS:

Religious terms, translation strategies, dynamic equivalence, Eugene Nida, culture-specific items, Uzbek–English translation, Saodat Asri Qissalari, Islamic terminology, untranslatability, cultural context

INTRODUCTION

Religious language is never just about words. It reflects belief, identity, and emotion. Translating terms rooted in religion—like sajda, shafoat, or Baytulloh—can be especially challenging, because a direct translation may miss their deeper meaning or even confuse the reader. This is particularly true in works like Saodat Asri Qissalari, where Islamic terms are central to the message and mood.

To explore this, I rely on Eugene Nida's dynamic equivalence theory, which focuses not only on what the words say, but how they make the reader feel. As Nida puts it, "A translation of dynamic equivalence aims at complete naturalness of expression, and tries to relate the receptor to modes of behavior relevant within the context of his own culture" (Nida, 1964, p. 159).

This study analyzes five key religious terms from the Uzbek translation of the book and suggests ways to carry their spiritual and emotional meaning into English. The goal is not just to be accurate, but to help English readers experience the text as Uzbek readers do—with the same clarity, respect, and feeling.

LITERATURE REVIEW

Translating religious language involves more than finding word-for-word matches—it requires a deep understanding of meaning, tone, and context. Scholars have long debated how best to handle sacred terms, especially when translating them for audiences from different cultures or faith backgrounds.

One of the most widely accepted approaches is Eugene Nida's dynamic equivalence. According to Nida (1964), "a translation of dynamic equivalence aims at complete naturalness of expression, and

THE MULTIDISCIPLINARY JOURNAL OF SCIENCE AND TECHNOLOGY

VOLUME-5, ISSUE-6

tries to relate the receptor to modes of behavior relevant within the context of his own culture." His theory focuses not just on the form of the original text but on how it affects the reader. In this view, a good translation recreates the same emotional and spiritual response, even if the exact words change. Building on this, Al-Tarawneh (2021) applied Nida's model to Islamic texts, arguing that dynamic equivalence helps preserve the original intent of the Quran when translating into English. His findings show that this method respects both the target culture and the religious sensitivity of the source.

Meanwhile, Newmark (1988) introduced practical strategies for translating culture-bound terms. His methods include transference (keeping the original word), descriptive equivalents, and cultural equivalents—all of which help translators navigate complex terms without losing clarity. Though Newmark's focus wasn't solely religious, his tools remain useful when dealing with culturally loaded words like sajda or shafoat.

In a similar line, Ibrahim and Johnson-Davies (2000) explored the translation of Islamic terms into English, especially in Hadith literature. They emphasized the challenge of deciding whether to translate or transliterate religious terms, noting that either choice could work depending on context, audience, and purpose.

Together, these scholars provide a solid foundation for this paper. Nida's theory guides the emotional and spiritual accuracy of translation, while Newmark, Al-Tarawneh, and Ibrahim & Johnson-Davies offer practical insights into translating Islamic terms for broader audiences.

METHODOLOGY

This study uses a qualitative, descriptive method to analyze how selected Islamic religious terms are translated from Uzbek into English. The main source is the Uzbek translation of Saodat Asri Qissalari, originally written in Turkish by Ahmet Lutfi Kazancı. Five religious terms were chosen based on their cultural and theological importance: sajda, shafoat, qurbonlik, Sunnah, and Baytulloh.

Each term was examined in its full sentence context within the source text, and an English translation was proposed. Then, the translation problems were identified—for example, possible misunderstandings, loss of spiritual meaning, or cultural distortion. To address these issues, translation strategies were applied following Eugene Nida's theory of dynamic equivalence, which focuses on conveying the original meaning and emotional impact in a way that feels natural to the target audience.

To ensure clarity and relevance, each analysis includes:

- The original Uzbek excerpt
- The proposed English version
- A clear explanation of the translation challenge
- The strategy used
- A short justification based on Nida's approach

This approach combines linguistic analysis with cultural sensitivity, aiming to produce translations that are not only accurate but also meaningful to English-speaking readers.

ANALYSIS AND DISCUSSION

Table 1

Source text (Uzbek)	Translated text (English)

ISSN: 2582-4686 SJIF 2021-3.261,SJIF 2022-2.889,
2024-6.875 ResearchBib IF: 9.948 / 2024

*Бут ясалгани ҳақидаги хабар бутун карвон бўйлаб тарқалди. Сал наридагилар ҳам келишди. Ўттизқирқ кишилик бир оломон тўпланди. Ҳаммалари мана шу лой санамнинг қаршисида бошларини ерга қўйиб, **сажда қилишар**, кафтларини очиб унга ёлвориб, атрофида гир айланишар эди.* **[5:137]**	*News of the idol being made spread throughout the caravan. People from nearby also came. A crowd of thirty or forty gathered. They all placed their foreheads on the ground and **prostrated**, raising their hands in supplication and circling around the clay figure..*

Translation Analysis:

Translation Problem: ***Translation Problem:***

While sajda normally refers to a sacred act of worship in Islam, in this case, it describes bowing to an idol. Translating it as prostrated could mislead readers into thinking the act was religiously appropriate. It's important that the translation reflects the context of false worship clearly.

Suggested Translation Strategy:

*Use a **functional equivalent** for natural flow (prostrated) while relying on contextual clarification (e.g., "to the clay figure") to show that this was not Islamic worship.*

Justification (Nida's Dynamic Equivalence:

According to Eugene Nida's theory of dynamic equivalence, a good translation should create the same effect for the target audience as for the original readers. Using sajda might confuse readers unfamiliar with Islamic terms. Prostrated captures the physical action, while the surrounding context maintains the intended tone of irony and disapproval.

Table 2

Source text (Uzbek)	Translated text (English)
*Бу қаймоқ хўжайини томонидан, ёмғир ёғишига **шафоатчи** бўлар, деган умидда бу бутга берилган пора эди* **[5:126]**	*This cream was offered to the idol by the slave's master, hoping it would serve as an **intercessor** to bring rain — in effect, a kind of bribe.*

Translation Analysis:

Translation Problem:

In Islam, ***shafoat*** is the Prophet's sacred act of interceding for believers, yet here it's twisted to mean bribing an idol for rain. Simply calling it "intercessor" risks sounding like genuine worship instead of the intended mockery—and downplays the serious distortion of buying divine favor.

Suggested Translation Strategy:

*Use a functional equivalent—**intercessor**—and add "a kind of bribe" to show the irony. This keeps the text natural while making the false worship clear.*

Justification (Nida's Dynamic Equivalence:

Nida says a translation should give readers the same response as the original. Just "intercessor" risks losing the sacred weight and confusing non-Muslim readers. Adding "a kind of bribe" preserves the irony and critical tone, so English readers feel the same shock and disapproval.

Table 3

Source text (Uzbek)	Translated text (English)
Маккада байрам. Маккаликларнинг деярли ҳаммаси шаҳар кўчаларига чиққан. Улар	*It was festival time in Mecca. Nearly everyone in the city poured into the streets, gathering*

бир бутнинг атрофига тўпланганлар. ***Курбонликлар*** *сўйилиб, бутга бахшида этилаётир.* **[5:253]**	*around an idol.* ***Sacrificial offerings*** *were being slaughtered and presented to it.*

Translation Analysis:

Translation **Problem:**

In Islam, qurban refers to the Eid al-Adha ritual of sacrificing animals for Allah. Here, the same word describes people offering those sacrifices to an idol. Simply translating it as "sacrifices" risks evoking the sacred Eid practice rather than showing this twisted, idolatrous use.

Suggested Translation Strategy:

Use a functional equivalent, e.g. "sacrificial offerings", and keep "to it" (the idol) right after, so readers understand these offerings are misdirected.

Justification (Nida's Dynamic Equivalence:

Nida's principle says a translation should stir the same reaction in the target reader as in the original audience. Calling them "sacrificial offerings" keeps the ritual's weight, while explicitly linking them to the idol shows the shock and abomination. This way, English readers feel the same sense of misplaced devotion.

Table 4

Source text (Uzbek)	Translated text (English)
Эртанги куннинг буюк инсоний бўладиган, пайғамбарининг ***суннатларини*** *шахсан ўз ҳаёти орқали намуна қиладиган ва саҳобаларнинг илк сафларидан ўрин ололиган бу гўдакка Абдуллоҳ исми берилди.* **[5:309]**	*They named the baby Abdullah, who in the great days to come would personally follow the Prophet's* ***Sunnah*** *throughout his life and stand among the first ranks of the Companions.*

Translation Analysis:

Translation **Problem:**

The term *Sunnah* is a central Islamic concept referring to the Prophet Muhammad's practices and example. Simply translating it as "traditions" or "examples" strips away its religious weight, while leaving it untranslated can confuse readers unfamiliar with Islamic terminology.

Suggested Translation Strategy:

Use transliteration—keep Sunnah—and add a brief explanatory note in parentheses:
"Prophet's Sunnah (his life example)"

Justification (Nida's Dynamic Equivalence:

Nida says a good translation makes readers react the same way as the original audience. By keeping "Sunnah" and adding "(the Prophet's example in life)," English readers understand both the term's religious depth and its honored status. This way, they feel the same respect and significance as Uzbek readers .

VOLUME-5, ISSUE-6

бирга бўлган ўғлимизни сўраб келдик.. **[5:228]**	

Translation Analysis:

Translation Problem:

Simply rendering байтуллоҳ as *"the Kaaba"* may lose its literal meaning and spiritual resonance *("House of God"),* while leaving it untranslated can confuse readers unfamiliar with Islamic terminology. The challenge is to convey both the proper name and its profound religious significance.

Suggested Translation Strategy:

*Use a **functional equivalent** for natural readability, plus a **descriptive equivalent** in parentheses: "The Kaaba (Baytulloh, the House of God)"*

Justification (Nida's Dynamic Equivalence:

Nida advises that translations should evoke the same understanding and emotional impact in the new audience as in the original one. By calling it the Kaaba—the term most English readers will recognize—and immediately adding "Baytulloh, the House of God," we preserve both familiarity and the sacred nuance. This approach ensures English readers grasp the term's religious weight and feel its reverence just as Uzbek readers would.

CONCLUSION

Religious terms are not just about language — they carry deep meaning, emotion, and cultural identity. As this study shows, translating words like sajda, shafoat, or Baytulloh into English is not always straightforward. A literal translation can sometimes cause confusion or even change the message. By using Eugene Nida's dynamic equivalence approach, it's possible to go beyond just translating words and instead focus on how those words feel and what they mean to the reader.

The five terms studied in this paper highlight different challenges — from maintaining sacredness to avoiding false interpretations. The solutions, whether using functional equivalents or adding short explanations, show that careful, thoughtful translation can keep both meaning and emotion intact. In the end, religious translation is not just a technical task, but a responsible and sensitive process that respects both the source and the target audience.
