Innovative teaching methods based on paremic tools in education for schoolchildren

Abdurashidova Gavhar Abdurazzok kizi
Asia international university, Bukhara, Uzbekistan

Abstract: This article examines the essence, advantages, practical recommendations and ways to increase the effectiveness of innovative teaching methods based on paremic tools in education for schoolchildren.

Keywords: methodology, innovation, paremic tools, innovative education, aphorisms, education.

In the modern education system, not only scientific knowledge, but also the educational process is of great importance. Especially at the school level, instilling moral values, national and universal ideas in students is an integral part of the educational process. Various innovative pedagogical approaches are being used to increase the effectiveness of the discipline of education. One of such approaches is the methodology of teaching based on paremic tools, which serves as an important tool in developing students' thinking and enriching their moral and spiritual world.

Paremic tools are short, memorable expressions that embody proverbs, aphorisms, and life wisdom. They have a special impact on introducing students to moral values. Therefore, in the discipline of education, it has become an urgent task to combine paremic tools with modern pedagogical technologies, develop innovative educational methodologies and implement them in practice.

The term paremics comes from the Greek word “paroimia”, which means “proverb” or “combination of words”. Paremics are usually the result of life experience and folk oral creativity of the people, expressing moral and practical advice for people in a short and understandable form (Khudayberdiev, 2015).

The role of paremics in education is incomparable, because they:

• Since they are short and memorable expressions, they are retained in the memory of students for a long time;

• Facilitate the explanation of moral values;

• Develop thinking and logical thinking;

• Increase language culture and form a culture of speech.

For example, paremics such as “The fruit of hard work is sweet”, “Honest words open the heart”, “Friendship is the greatest wealth” are effective and understandable for school-age children.

Innovative teaching methodology.

Innovative teaching is the renewal of the traditional educational process using modern pedagogical technologies, information and communication tools and interactive methods. This approach is aimed at improving the quality of education, encouraging students to be active, independent, and creative.

Innovative teaching based on paremic tools in education can have the following main directions:

• Use of interactive methods: Analysis, discussion, and linking paremics with students;

• Use of multimedia: Presentation of paremic tools in the form of video, audio, slides, organization of interactive lessons;

• Project-based learning: Create small projects on ethical topics based on paremics in groups;

• Games and quizzes: Organize games and quizzes that make it easier to remember paremics;

• Use of information technology: Study and evaluate paremics through online platforms.

In order to effectively use paremic tools in the educational process, a lesson plan should be carefully prepared in advance. It is necessary to select paremic tools that are consistent with the topic and objectives of the lesson. For example, relevant proverbs and aphorisms are selected on the topics of "Friendship and Love", "Labor Education", "Honesty and Justice".

Organizing questions and answers, discussions, debates based on paremic tools activates students' activities. The teacher asks students to explain the meaning of paremic tools, requires them to relate them to real-life situations. In this process, students begin to express their thoughts freely.

Using multimedia tools is an effective way to make information more interesting and understandable. Video clips, animations, electronic presentations prepared on the basis of paremic tools in lessons help to focus students' attention. At the same time, online tests and quizzes are used to assess students' knowledge.

Students can be divided into groups and encouraged to create small creative projects on moral and ethical topics based on paremic tools. For example, preparing a presentation on the topic "My favorite proverb" or organizing a theater scene. This method develops teamwork skills in students.

To increase student motivation, it is recommended to conduct interesting games and quizzes based on paremic tools. In this case, games such as "Collection of proverbs", "Who can find it the fastest?" encourage students to actively participate.

Advantages of innovative methodologies and ways to increase their effectiveness in the educational process:

Innovative teaching methods based on paremic tools have the following advantages:

• Students are given the opportunity to deepen their understanding of moral values;

• Thinking and communication skills are developed;

• The lesson process is interesting and interactive;

• Students develop independent thinking and a creative approach;

• The educational process is modernized with the help of information and communication technologies.

To increase the effectiveness of education, the following can be recommended:

• Selecting paremics appropriate to the topic and age characteristics;

• Regular use of paremics in each lesson;

• Encouraging students to analyze paremics and freely express their thoughts;

• Continuing home education based on paremics in cooperation with parents.

Innovative teaching methods based on paremic tools in the subject of education for schoolchildren are an effective tool not only for improving the quality of moral and spiritual education, but also for developing students' thinking and communication skills. The integration of paremics into the educational process with the help of modern pedagogical technologies and information and communication tools allows increasing students' interest in education. Therefore, this methodology should be widely implemented in the education system.
