Regional development modern concepts : theoretical approaches and scientific basis

Alisher Khudoynazarovich Shadiev , Bukhara state university PHD student , Asia international university, teacher

Abstract: This article refines the composition of key characteristics in the development process of a specific integrated region in line with modern scientific approaches, emphasizing aspects such as multidimensionality, imbalance, inconsistency, periodicity, and gradual progression. The study conducts a comparative analysis of the theoretical specifics of contemporary scientific approaches to regional socio-economic development, clarifying the author's scientific directions within the research framework. Based on this, the initial phase of the research outlines key points for formulating practical proposals and recommendations, thereby establishing a solid foundation for achieving the research objectives.

Keywords: socio-economic development, market economy, financial policy, fiscal policy, subsidies, differentiated tax rates, innovation-driven development, human capital theory, institutional development.

20th century from the middle considering scientific in the community of the regions socio-economic development level to evaluate relevant approaches take shape In particular , the regions socio-economic development level to evaluate aimed at the most wide comprehensive from approaches one United Nations Organization Developed in 1970 by released .

M. Litwinski believes : “ Development concept definition to changes encountered coming reason was socio-cultural context features showing transition important importance has This is considered modern researchers by previously being pushed development process definitions right and deep understanding opportunity gives ” [9].

Ecological and economic development alternative theories research enough that's it EYDotsenko , NPEzdina , A.Sh. Khasanova , and The MIKhasanovs [3] socio-economic in development environment factor instead alternative economic schools and directions ideas in consideration received without they mark and human of life basis was the environment save stay problems to the analysis wide accent they give .

S. Bekmurodova According to him, “ The region responsibility increase state authority of the organs powers decentralization result is , its financial-economic from the possibilities use efficiency to increase aimed at region of subjects mutual cooperation management methodology working exit current on the day objective necessity calculated , market of relations formation regions in development socio-economic asymmetry to increase and regional finance policy balanced take to go to the necessity take came ” [13].

D.Sh.Yavmutov territorial development priority direction as regional ecological-economic stable development concept working to go out dedicated research as a result : " the region's ecological-economic stable development – in the region ecological and economic systems and their mutual related processes territorial stable develop for the purpose effective organization to be is considered ” [2] definition working came out .

Modern under the conditions economic system external impact factors different in periods various reaction to give clear to the eye [5]. Economic of the region formation for one row conditions there is to them historical , socio-economic and natural conditions [15]. Historical conditions economic of the regions in the formation main from factors one of the population ancient location , trade roads , cultural connections and historical state borders interregional economic connections Socio - economic conditions population density , labor resources , infrastructure level , production release forces , markets existence enters .

Research as a result regions socio-economic develop 10 types according to modern approaches existence we have determined : 1) inclusive development ; 2) digital transformation ; 3) territorial clustering ; 4) agrologistics and village regions development ; 5) center-periphery theory ; 6) endogenous development ; 7) innovative development ; 8) human capital theory ; 9) stable development 10) institutional development (see Table 1).

Table 1

Region socio-economic develop according to modern approaches[1]

No.	Approach name	Essence	Authors	Year
1	Stable development	Social , economic , environmental harmony	Gro Harlem Brundtland	Our Common Future (1987)
2	Inclusive development	Economic from growth everyone interested to be	Amartya You , UNDP	Development as Freedom (1999), UNDP HDR (2010)
3	Digital transformation	Digital technologies through efficiency	Claus Schwab , Brynjolfsson McAfee	The Fourth Industrial Revolution (2016); The Second Machine Age (2014)
4	Regional clustering	Clusters through competitiveness	Michael Porter	The Competitive Advantage of Nations (1990)
5	Agrologistics and village development	Village infrastructure and food safety	Robert Chambers , FAO, IFAD	Rural Development: Putting the Last First (1983)
6	Center-periphery theory	Development from centers to the periphery spreads	Francois Perroux , Gunnar Myrdal	L'économie du XXe siècle (1961); Economic Theory and Underdeveloped Regions (1957)

7	Endogenous development	Internal resources and to knowledge based development	Paul Romer , Masahiko Aoki	Romer – Endogenous Technological Change (1990)
8	Innovative development	Innovations main driver as	Joseph Schumpeter , Freeman , Perez	Schumpeter – Capitalism, Socialism and Democracy (1942); Freeman & Perez (1988)
9	Human capital theory	Education and health storage – main investment	Theodore Schultz , Gary Becker	Schultz – Nobel Lecture (1979); Becker – Human Capital (1964)
10	Institutional development	Institutions and management solution doer importance has	Douglass North, Dani Rodrick	North – Institutions, Institutional Change and Economic Performance (1990); Rodrick (2000)

Economic growth , that is working of release increase , main priority task as determination because of economic issues people between to the main topic of relations [4]. Human development , usually in ecosystems damage delivers , this and types number to decrease take come , as a result plant and animal types loss future generations choice opportunities serious limiting to put Therefore , the Brundtland report calls for “ sustainable development plant and animal types save " requires to stay " conclusion previously pushed [7].

Regional growth and development theories economic to schools , country impact to the circles or other features based on grouping possible . Models and strategies classification the most wide widespread from the approaches one economic growth formative to factors looking at main theories seeing exit is considered .

CIS countries scientists A.Yu.Makarova , ANershov , NSKibitkina , IMTimoshenko , PVShinkorenko above to thoughts basics yes , regional growth and development theories four to the group separation possible emphasized :

First group theories – traditional exogenous neoclassical models . They human labor and capital currents seeing This will come out . in the group theories within labor and capital amount economic growth main factors is considered . In our opinion , this in theories external factors impact is considered large and internal in the system changes indifferent is left .

Second group theories agglomeration models input This is possible . in the group in theories economic growth main factor agglomeration impact and scale This is the effect . in the model often regions between inequalities denial is being and smaller regions or underdeveloped regions indifferent postponement possible .

Third group theories – regional endogenous growth and development models are , they are within development main factors as human capital , network impact and clusters seeing endogenous

growth since the 1980s theory supporters PM Romer , RELucas , G. Grossman and E. Helpman technological changes economic growth processes basis organization to do emphasizing , human to capital more investment input importance ideas previously [6; 10] . However , this in theories technological the changes are also linear process as illustrated are , they are economic to efficiency impact doer from the market outside processes and socio-institutional of the characteristics importance out of consideration aside leaves , although this features human well-being for extremely is important [14].

This group in their theories sometimes system inside social and political factors into account to take forgotten , this and some in cases inequality to increase take arrival We think it is possible .

Fourth group theories – regional innovative Innovations , innovative models process , teaching new approaches are companies , regions , as well as countries and global alliances far term growth of providing main are sources . In our opinion , innovations current to grow many requires resources probability high , that because of developing regions and poor countries for this practice noticeable at the level limited to be possible .

Regional growth and development theories additional groups with filling we think it is possible and this groups scientific basics and economic growth different factors into account take further more precisely approaches can provide . Below in consideration to be taken necessary groups seeing we go out :

Institutional theories – economic growth and development organization provider main factor as institutional the environment seeing Theories , economic activity done in increasing institution and normative systems importance in consideration political stability , legal systems , state policy and management structures covers .

This approach scientific basis as D. Acemoglu and A. Robinson [1] in his research in their work institutional systems countries economic to the success how impact to do showing that they gave record we can believer

Regional integration and globalization theories – economic growth and development main factor as regional integration and global network impact seeing This is in theories regional integration processes , trade blocks and international relationship economic to grow where in a way impact to do explained .

Social capital and networks theory – social of capital economic to grow was the impact learns . Networks and social relationships , society inside mutual trust , cooperation economic activity increases . This kind of theories in the regions different teams and social of groups mutual their connections develop through growth to strengthen goal In particular , R. Putnam's [11] social capital and his/her social and economic in development place about deep analyses done increased .
Social capital measure and him/her practical accordingly develop sometimes complicated past , abstract concept as consideration theory disadvantages to the point We consider it to be included .

Green economy and stable development theories – green economy and stable development modern approaches economic growth ecological stability with to harmonize focused on . Ecological security , again renewable energy sources and the environment storage economic development continuity to provide help to give accent is given .
Researcher In the research of T. Jackson [8] green economy and the environment storage economic growth with how harmony possibility studied .
In our opinion , the theory disadvantage green of the economy development sometimes precious

technologies and requires investments , which and some countries and in the regions done in increasing to difficulties take arrival possible with characterized .

So The UN approach scientific to the conclusion mainly social progress economic growth with harmonious to be The organization must social progress according to views this shows that economic growth himself/herself with together social progress take if it doesn't come , it stable development be cannot . In the UN concept economic growth only gross internal product size only increases not , maybe this growth population prosperity , equality and justice principles into account received without done increase necessary .
